> Sorry, but the perception is that you've already chosen up
> sides by the above.

Assume nothing. You don't know me, nor does anything i have posted make it obviously clear what I think about certain aspects of this hobby and the people who are in it. It's more complex than I will bother to let on.

>You've not perceived that I was never
> criticizing the ham hobby en toto, just the minority who

Come on, Len, no one can go back to the 30's even if they insisted on it! Ignore them if they piss you off.

> Oh? Consider that I've been IN the real world longer, seen
> more radio, operated more radio than most hams. I've done

> and it covers a greater span of the spectrum than a few HF
> bands allocated to hobbyists. I've been IN that Big World.

Another illustration that proves the point that others have made here. You think that SOME hams think they're superior because of this and that attitude they display and you apparently don't bother to look at some of the stuff you type. Seems pretty haughty to me!

> Supplicants never do. Their Belief is unshakable. They don't
> know they are being manipulated by an even smaller minority
> of that "church." Worse yet, most simply let that "church"

> Ah, but I must "sit for the ham test" to "prove a committment
> and dedication to the amateur community!" I'm sorry, but that is
> one of the silliest bogus-brained reasons I've ever heard.

Okay, so you won't take the requirements to get the license, you won't get one. What makes you think the rules should be changed just because you think you know more than the average person that sits for an AR test?

> Jackie, did you REALLY want an answer or were you just
> trolling because the bands were dead at the moment? :-)

I never troll. I have better things to do with my time. I wanted to get a better idea of where you are coming from so I asked the questions.

One thing you might want to remember... just because I may not be as critical as you, does not mean I've "aligned" myself to anyone in here. I speak for myself only. I got into AR because I was a SWL for years, and there are certain things about it that are fun to me. I could not care less about the code/no-code debate. I just took the test because it was a requirement to get on HF. I don't see it as some eeeevil conspiracy to keep people out, nor do I use the fact that I passed the code test as some badge of superiority that I can hold over others. Means to an end was all it was.

Gotta go to work.

Jackie

I'd phrase it another way, Dave. I'd say that in some areas the ARRL leadership
has become out of touch with what "serving the membership" entails.
>
>The removal of "Section News" and contest line scores, the inauguration
>of the elitist "Diamond Club", charging applicants for the Rag Chewers
>Club and Old Timers Club certificats and doing away with the plastic
>mailing sleeve for QST (some years back) are a few of my peeves.
>
Mine too. Also the removal of Board minutes. Here's another:

Back in 1975, FCC proposed a complex "dual-ladder" license scheme. This was
just a few years after the hotly-debated incentive licensing changes.

So ARRL leadership sent out a multipage questionaire to all members.
Standardized 5-point agree-disagree format on most of the questions. Results
were published in QST, and ARRL policy closely followed those results.

Fast forward to 1996. ARRL sends out a flawed survey to 1500 or so hams, mostly
members. Partial results are published in QST. The flaws are discussed in
detail here and elsewhere.

In 1998, both ARRL and FCC propose restructuring. Is there a new all-members
survey? Nope. Yet it would have been simple to dust off and rework the 1975
survey, and get a detailed view of what members think. Costs too much? They had
the money in '75. And I for one would be gald to donate some bucks to fund an
in-depth survey.

I always wondered how Joe got that call.
Sometimes it does not work out. Jim Millen was "promised" W1HRO but
ended up with W1HRX.

Having been on the air since about two years after "the first
incentive licensing scenario" got dropped on ham radio (the 1951
creation of the Novice & Tech tickets. Another long forgotten major
uproar) I was obviously there and there were "pecking orders". Maybe
they were a bit more "fraternal" but they were there. The engineers
patting us technical newbie kid Novices on their lame heads. No, they
didn't usually take the time to do any elmering, they told us to go
buy a handbook. Novices spoke only when spoken to at meetings
dominated by the OFs. The real biggie was the money. I clearly
remember the first time I visited a Big Gun's station, stacks of
Collins gear. I was dumbstruck and it showed. His comment was
something like "Some of us have it and some just don't, that's the way
it is kid." With a sneer. Fortunately the dramatic changes in personal
and equipment economics since then have leveled that particular
pecking order.

My point is that human nature hasn't changed a damned bit since then,
the establishment of pecking orders are normal human behavior by
whatever means they can be generated and they *will* happen. At this
point in ham radio the details are just minor details which shift over
time based on the FCC fiat of the moment. All of it is completely
ignorable. If ya don't ignore it, YOU own the problem.

> When incentive licensing came, so did the "I have a better license, I'm a
> better ham" school of thought. And since there were several new levels,
> not just one, there was ample room for everybody to look down on someone
> else. In your local club, do the Extras hang out only with the Extras?

Hams around here with similar interests clump together, they
definitely do not clump based on license class. The dxers & contesters
clump and we're overwhelmingly Extras or Advanced licensees simply
because ya need an Extra or an Advanced if yer serious about dxing.
Has absolutely nothing to do with pecking orders or "classism".

Hell, I sailed along happy as a clam dxing & contesting my buns off
for 14 years as a General with never a thought of upgrading until the
FCC lowered the boom in '68 and tossed us Generals out of the HF DX
windows. So I took the frigging test and got the windows back. Big
deal.

> Do the Generals shun the Novices? Does everyone look down on the
> "No-Code Techs"? I'll bet most of the no-coders never come to their
> second meeting.

We have clubs around here chaired by Techs & Generals and the machines
are loaded with nocodes who are nice guys and good ops and get
seriously involved in various events. While numbers of lethargic 20wpm
Extras sit on their dead butts and do nothing. To the point that of
the numerous neighborhood type clubs around here I don't know of one
chaired by an Extra.

On the rare occasions I've run into here when somebody got stupid and
took a swipe at nocodes on one of the machines, for instance, the
machine lit up like an Xmas tree with guys telling the jerk to go
pound sand and worse. Like as not it's 1x2 who will suggest the sand.
It just ain't tolerated.

I've noticed over time that ham behavior seems to be a tad different
on the left coast than it is here on the right coast . . ?

> There are lots of ways individuals could be recognized for their

Reminds me of Clinton: "Fer chrissake, can we get beyond the blue dress
and move on to more important things?"

IOW, the discussion will go away when the problem goes away. Clinton
didn't consider the blue dress a problem; you don't consider incentive
licensing a problem. Others do.

Not pointless at all. And it's a bulletin, not a message.

> Because
> that's the way Hiram Percy imagined how ham emergency traffic should
> be done? Pffft.

Not at all.

> Dump it, It's

[expletive deleted]
> which has notting to do with
> notting. There goes at least one page.

Ya missed the point.

Copying a 100+ word bulletin sent at a specific time and freq with no
repeats or fills requires a different skill set than running QSOs
where the exchange is three pieces of info like "W1ABC 4A EMA"
repeated over and over. Composing and sending a coherent message
requires a different skill set as well.

The format is chosen as a guide. It's the skills associated that
matter.
>
> Hiram Percy did die ya know . .

Nothin' to do with him.

See below about contest exchange.

> > Whole point of FD is "something for everybody"

Probably a CW transceiver powered by a battery. If I see a good deal
on a solar panel, I'll go for the natural power bonus.

> Are you
> gonna work a satellite? Are you gonna set up a GOAT station? Of course
> not. You're gonna toss up some antennas and churn score. Just like it
> "used to be." And I'm gonna do the same drill for exactly the same

And if a couple of EOCs and GOTA stations get on, there will be that
many more stations for me to work and get points from.

How many points did you score last year, compared to my operation?
>

> > Having all the catgeories and such is meant to widen the scope of FD.
> > Not a bad thing.
>
> Much of it is, as a minimum, a goofy thing at best. Generates gross
> confusion, lotta pointless pushups, wasted manpower, general BS, yadda
> yadda . .

How is it wasted? The folks who are going to do the GOTA thing or the satellite thing or the EOC thing would probably just stay home otherwise. They surely aren't going to be churning points in the CW tent at 3 AM.

You shoulda been there when I was doing the one-man deal back in the late '80s and early '90s. 866As flashing away in the tent at 3 AM, working the west coast on 80 like they were locals. Best year was '95, 629 CW and 11 phone QSOs in 1B-1. Just under 3000 points with the bonuses. Southgate Type 7 and the homebrew antenna setup sure proved themselves that year.

> which is why we both opted away from the annual k3mn "radio
> picnic".

The reason I opted out was because there was no plan, and I wasn't going to be the planner.

I like the picnic idea.

> Preaching in one direction and going in the other direction
> is bad form.

I think I got more FDs with that bunch than you have FDs. They weren't at an EOC, anyway.

> > > A lot of people

> phone and CW would be used on an equal points basis on the same
> weekend. One page.

There useta be two FDs per summer, way back in the mid 1930s. Early
June. late August.
>
> Lemmee guess which event you'd jump all over . .
>
I'd do both. The picnic thing with a club, the other as a serious
single op. Heck, the first would be a warmup/testout for the second.

My biggest complaint about contest exchanges is that they're too dang
simple. Callsign, class, section, all repeated over and over, 3 pieces
of info, whatta weenie way to make points.

Lookit SS: Unique serial number, class, callsign, check, section.
Five pieces of info, one of them unique to the QSO. Back when I
started, there was a sixth piece of info in the SS exchange, the date
(month and day of yer birthday).

I say make the exchanges longer. More credit for actual messages
handled. Have W1AW send several different FD messages. Allow multiple
power levels at the same multi-multi.

If all FD does is get some sedentary hams outa their houses and
exposes them to some fresh air, it's a good thing. If maybe they learn
a skill or two, all the better.

Your '897 show up yet?

> the false misdirection that I am "against all hams."

Speaking of not taking any "negativism"....

Pot/Kettle/Black, Your Putziness.

>Please don't start in with this "pool of trained operators"
> nonsense.

Please show where it is "nonsense", Lennie. So far, every MOU-supported
agency has renewed thier agreements with the ARRL to provide JUST THAT.

> Real emergencies don't need 1912 Save-the-
> Titanic CW skills. Real emergency/disaster folks don't use
> CW and haven't done so for decades.

And "ral emergencies" have been suppoerted by Amateurs with a plethora of
other modes for those same decades, lennie...INCLUDING Morse Code.

>Sorry, but the perception is that you've already chosen up
> sides by the above. You've not perceived that I was never
> criticizing the ham hobby en toto, just the minority who
> insist on the 1930s status quo at all costs.

Sorry, Lennie, but your assertion that thee is some "minority" that
insists on the retention of 1930's standards is a lie.

You are asked, no, demanded to show where even ONE person in this
newsgroup has suggested such silliness.

>That minority
> assumes the God-like status repleat with nobless oblige
> talk-downs to the peasants and infrequent Sermons on the

> Antenna Mount.

Kinda-like alleged ex radio engineers who insinuate that their
"professional" standing makes them the creme-de-le-creme of the radio
community...Kinda like you do...

>I define the "real world" as the here and now, where radio is
> a communications tool that isn't magic or supernatural. It has
> known physical properties...known to those who take the time
> to understand it instead of being spoon-fed little snippets of
> factoids or emotionally bent by clever advertising.

In as much as you are NOT a "here-and-now" participant in the Amateur
Radio Service (this newsgroup notwithstanding), your above quote is pretty
funny.

>Watch what the PCTAs spout in here. They always point to
> ARRL this or that for their references in/for/about ham radio.
> Very few know what the RSGB has or much of anything else
> by Yurp organizations or Ozzies or New Zealanders or
> Japanese or other amateur groups aligned/misaligned with the
> IARU.

Why would Americans (the majority of posters herein with apologies to the
few non-US posters here) be interested in the policies or programs of
organizations of which they are NOT members or do NOT impact their
participation in Amateur Radio?

None of the agencies you cite impact US Amateur Radio practice or
regulations, Lennie.

>>C'mon, it's a hobby, AND a service, AND
>>some people happen to get some pleasure out of any number of aspects that
>>fall under those two categories. What is the problem with that?
>
> There's NO problem with that...except when they divorce
> themselves from reality or USE the service aspect glow to
> light their own personal radiance (when their pilot is nearly
> out). It does NOT require an amateur license to be of help
> to one's nation, community, or whatever

I think Jackie's already gotten the idea that you do not deem any
"service" of any degree as relevent, Lennie...especially when those facts ruin
your rants.

> It doesn't. My original intent was to engage in debate for the
> removal of the morse code test for any amateur radio license
> test. Instead, it has been a sort of firefight of personally-aimed
> pejoratives fired by amateur marksmen shooting certificates
> and titles as if they were ICBMs. Ptui. Those were just BMs.

Whatever yor intent, Lennie, YOU changed it to the character that it is
today.

Criticize "Google" as you will, if Jackie's of a mind, she can research your previous screen names and see who said what and who started what.

And I see you're spitting again. Not nice in public. (How'd you get those BM's in your mouth anyway, Lennie???)

>Ah, but I must "sit for the ham test" to "prove a committment
> and dedication to the amateur community!" I'm sorry, but that is
> one of the silliest bogus-brained reasons I've ever heard.

No, Your Putziness, you must sit for an Amateur license to GET an Amateur license and then become active in real-life, day-to-day Amateur Radio programs in order to make INFORMED opinions on them.

>I'm sorry, but that is one of the silliest bogus-brained reasons I've ever heard.

That's because you're not listening.
>Ham
> radio doesn't operate by "different" radio physics principles and
> the ham radio waves don't propagate differently than other radio
> waves.

It's not about physics...it's about practice.

>Ham radio does NOT need any morse code test for a
> license or even any morse code skill at all.

As of today it does. So says the Congress of the Untied States, by virtue of the Communications Act of 1934 as ammended, and by Congressional ratification of various international treaties.

>It doesn't need to be bogged down by beaurocracy, rigid
> inflexible rules, and absolute adherence to correct hamspeak.

It's not. If you were a participating licensee you'd know that.

By the way, Lennie, how many different modes and frequency bands can YOU operate on RIGHT NOW...this VERY moment, with your GROL...?!?!

>Ham radio of today has become, for some, a sort of fantasy
> land...(SNIP)

The fantasies about what Amateur Radio is or has become are in your mind, Lennie.

>So, despite the insistence of the defunct diplomat in here,
> the bus driver, the hoagie muncher, the dill sergeant wanting
> a uniform real bad, the reverend working at an undisclosed
> location, or anyone else, that coveted amateur ticket won't
> be bought to radio never-neverland this week or next week.

I think Jackie can get a pretty good idea where the name calling, obfuscations and perjoratives originate from after THAT little tirade, Lennie.

>Jackie, did you REALLY want an answer or were you just
> trolling because the bands were dead at the moment?

Jackie just found out that any question posed to you opens the door for more hatred and scornful admonitions of Amateur Radio in general and Amateur Radio Operators in particular.

Usual Lennieisms.

Steve, K4YZ

That's more of the "established working adult" vs the "starving unemployable teenager" pattern than anything else. And some of the adult's demand that the teenager to kiss his ass. Ever notice that the more accomplished adults are less likely to demand "respect" than less accomplished ones?

So is ARRL. :-)

>Bill, W7TI, talks of an era when people supposedly didn;t do
>such things. I use the example of TV to show it did happen back then.

Not really. You made a point of spotlighting Philadelphia.

Camden, NJ, was the center of RCA Corpoartion, right acress
the Delaware River from Philly. Do we sense some local
sociopolitical antipathy? :-)

Here's some more "examples" on TV:

Bell Labs did their first TV transmission on April 7, 1927.
Using a "flying spot" scanner camera system, they
transmitted their "Felix the Cat" image in 1930, that
received image shown on movie theater newsreels later.

First installation of a TV antenna on NYC's Empire State
building was in 1931, first TV transmission from there on
October 30, 1931. Oops, that was by greedy, evil,
capitalistic RCA! :-)

Telefunken used iconoscope TV cameras at the 1936
Berlin summer Olympics. In the same year there were
six US companies making TV sets for the NYC market.

Whatever happened to ol' Philo's image dissector?

>>The Farnsworth versus RCA controversy is
>>worth noting however (inventors deserve credit).
>>
>The courts ruled that Farnsworth and Armstrong had their patent rights

>infringed by Sarnoff's RCA. Zwyorkin was no dummy but he was no Farnsworth,
>either.

That's nice. Mrs. Farnsworth and Mrs. Zworykin must have been
happy about being able to distinguish one from the other.

Note Vladimir's surname spelling. If you keep on making all
those errors and mistakes, no one will take you seriously in
here... :-)

>Sarnoff just didn't like to pay licensing fees.

Greedy, evil capitalists are like that. It affected Ed Armstrong
so much (about all the law suits, some of which he started)
that his wife left him and he eventually committed suicide.

Business is IN business FOR pecuniary interest. Hello?

Amateur radio is defined by law as NOT for pecuniary
interest...

>No, but that would not have stopped someone from helping out by using their
>other skills.

Amateur radio was conspicuously missing in the 1994 damage
area during the week following that earthquake. FEMA put in
its fly-away sat terminals featuring video message boards for
relatives of the victims. That was on TV news.

No doubt other easterners think of that earthquake like some
little event on the "left coast." That 1994 earthquake affected
a population area of about 10 million.

>> Licenses in amateur radio are NOT absolutely required to
>> help any emergency/disaster/relief group. TRAINING IS.
>
>Of course.

Others think that professional public safety communications
"always goes down in an emergency and hams rush in to
help save the day." [that's been said, in different words, but
with the same obvious meaning, for years]

If that were the case, why are those morse/minutemen allowing
their local governments to waste so much of their tax dollars on
professional equipment that "always breaks down in an
emergency?"

>> Neither you nor anyone else gets "trained in emergency
>> communications" by doing ham hobby comm or working up
>> high point scores in "radio sport" contests.
>
>And I never suggested that they did. The above is an example of how AR is a
>hobby.

Amateur radio has always been a hobby, a recreational activity
involving radio. A problem with some hobbyists is that isn't
enough glory reflection on them...they want the feel-good
myth of Being Important/Better-than-average and organizations
like ARRL serve that to them on a silver (somewhat tarnished)
platter.

Some hobbyists NEED emotionally-loaded redefinitions. The
amateur radio "service" is very popular for self-grandiosement.

Throughout all of Title 47 CFR, the word "service" is a regulatory
term denoting a type and kind of radio activity.

>> Please don't start in with this "pool of trained operators"
>> nonsense.
>
>I merely illustrated one way that hams can and do help out with what they
>have.

And I'm pointing out that such political phraseology ("pool of
trained operators") is just such a high-sounding, emotionally-
loaded, political buzz-phrase.

>> Sorry, but the perception is that you've already chosen up
>> sides by the above.
>
>Assume nothing. You don't know me, nor does anything i have posted make it
>obviously clear what I think about certain aspects of this hobby and the
>people who are in it. It's more complex than I will bother to let on.

All anyone has for perception in this particular medium are words
on a screen. The same words are repeated on everyone's screen.

Those words DO reflect SOME of what individual messagers
think. Or not think as is the case with some others. :-)

>> You've not perceived that I was never
>> criticizing the ham hobby en toto, just the minority who

>> talk-downs to the peasants and infrequent Sermons on the
>> Antenna Mount.
>
>Come on, Len, no one can go back to the 30's even if they insisted on it!
>Ignore them if they piss you off.

Some others seem desperately in need of going back to a
time when things were simpler. Their hindsight isn't just
20/20, it is practically 20/10! :-)

Think about how the illustrious ARRL got started, how it got
its name. [that's all history from their own words] Three men
thought it would be a nice idea to relay messages for their
own purposes. American Radio RELAY League. It wasn't
about relay devices (electromagnets activating switches).

Back in 1914 telegrams (sent by manual telegraphy in most
parts of the US) cost money and anyone sending one would
have to go to a telegraph office to start it (when the telegraph
office was open, of course). Delivery to a recipient's home
might be an extra charge...standard rate was for pickup at
the delivery offices.

If you look at that situation and reason now, it looks
suspiciously like 1914-style "hacking," doesn't it? Guys
using their CW rigs to send their own "telegrams." No money
paid out for that service, just use their "radios" (if one can call
that gear such) to send telegrams. Western Union and other
telegram carriers weren't really worried since hams were very,
very few then, didn't impact the Real telegram carriers unduly.

Eventually ARRL grew to a large membership organization
through a number of different actions. Hiram Percy Maxim
became "president for life" (so to speak) as the only club
president for its first two decades running. Maxim had extra
personal cash to play "leader," make trips to DC and do
lobbying, etc.

>> Oh? Consider that I've been IN the real world longer, seen

>
>Another illustration that proves the point that others have made here. You
>think that SOME hams think they're superior because of this and that
>attitude they display and you apparently don't bother to look at some of the
>stuff you type. Seems pretty haughty to me!

Now, now, you are showing irritation. :-)

Some amateurs DO consider themselves "superior" and have
done so for years in here. They seem to want and need a
fantasy concept of their apparent lifestyle devotional activity
and talk down to all who don't agree with them. I just point
that out...and that enrages them no end. :-)

I DO "look at everything I type." Can't help it when there's a
monitor right above my keyboard. As a semi-professional
writer (to other publications besides HR) since 1968, I don't
take the trouble to polish everything for a final draft version.
This medium doesn't pay enough for that. [it pays nothing]

>> Supplicants never do. Their Belief is unshakable. They don't
>> know they are being manipulated by an even smaller minority
>> of that "church." Worse yet, most simply let that "church"
>> handle everything for them.
>
>I don't take this as seriously as you do.

I don't "take it seriously" either. Other hams (PCTAs, mostly
"brain-dead old farts" in the immortal words of Jim Kehler,
KH2D) really and truly Do Take It Seriously. :-)

They come across as veritable Apostles of a New Creed even
though none of them sat at the feet of those at that last
supper. :-)

>> Ah, but I must "sit for the ham test" to "prove a committment
>> and dedication to the amateur community!" I'm sorry, but that is
>> one of the silliest bogus-brained reasons I've ever heard.
>
>Okay, so you won't take the requirements to get the license, you won't get
>one.

Slight correction. I haven't taken the trouble to take an amateur
radio license test. That wasn't my intention five years ago and
it still isn't a personal goal. Why is that license, that
certificate, so "meaningful" just to TALK about requirements?

I took a REAL test (commercial First 'Phone) in an FCC field
office in Chicago in 1956. I've taken real tests since on other
things, things like college finals rather scattered in the time
domain of night classes.

>What makes you think the rules should be changed just because you think
>you know more than the average person that sits for an AR test?

That isn't, never was "my argument." I'm just arguing against
the morse code test for an amateur radio license. Others,
nearly all of them self-centered brain-dead old farts (thanks
again, Jim) keep harping on "personal this" or "personal that."
To them, the "personal" aspect is all they can argue about.

US radio regulations are NOT concerned with "personals" but
apply to ALL CITIZENS. All. Not just those who are licensed
in a particular radio service. All citizens.

Taking a ham test to "show personal courage, committment,
or dedication to the amateur radio community" is total brainless
self-glorification any way one slices it. That "community" is not
"owed" a damn thing by anyone and neither does that
"community" regulate US radio legally or illegally.

Do I "know more about radio (and electronics) than the average
person sitting for an AR test?" Probably so. There's no Poll
to prove anything. I've only been IN radio and electronics for
a half century, getting paid to do engineering design work in
that. I've had to read and understand all sorts of different
(very required) specifications and other radio service rules
and regulations from the FCC. I find radio and electronics to
be very interesting. Enough interest to make that my prime
career choice in life. I don't find fraternal orders to be the same
and as a result I don't belong to any fraternal orders. :-)

A few others, again BDOFs, insist on Taking The Test To
Prove Something! To "prove" what? That I can approach
their noble, divine accomplishments? In a HOBBY?!? ptui.

Ah, but others, as yet unlicensed, "must prove their
personal courage, committment, and dedication to the
amateur radio community by taking a ham test!" Those
wonderful BDOFs pile into them like Spanish Inquistors
needing to light their fires. [they don't know how to flick
their bics, but they keep rubbing two cliches' together]

>> Jackie, did you REALLY want an answer or were you just
>> trolling because the bands were dead at the moment? :-)
>
>I never troll. I have better things to do with my time. I wanted to get a
>better idea of where you are coming from so I asked the questions.

I sensed trolling. :-) It is the "radio sport" of choice among
the newsgroupies here.

>One thing you might want to remember... just because I may not be as
>critical as you, does not mean I've "aligned" myself to anyone in here. I
>speak for myself only.

I think that thinking for oneself is an excellent attribute.

Others don't. They need to be spoon-fed requirements,
rigidly follow orders, march to the same drumbeat, etc.,
etc., etc. Thinking for themselves is difficult, Following
Orders is easy.

>I got into AR because I was a SWL for years, and
>there are certain things about it that are fun to me.

Fine. Excellent. Good on you. Amateur radio has always
been a hobby, a recreational activity.

>I could not care less
>about the code/no-code debate. I just took the test because it was a
>requirement to get on HF.

Okay. Fine. The "hoops" were there and you jumped through
them. You made it. Good on you. I'm questioning the
existance of certain "hoops" is all. :-)

Others in here don't think so. To them the "hoops" are the Main
Thing. It shows They can Do Things Others Haven't Done.
Oh, wow, yeah. Like cool. :-)

>I don't see it as some eeeevil conspiracy to keep
>people out, nor do I use the fact that I passed the code test as some badge
>of superiority that I can hold over others.

I'm not saying your are one of Them. :-)

>Means to an end was all it was.

To some in here the Means justifies the End. :-)

>Gotta go to work.

Done that for 52 years. Don't have to now. "Work" is a four-
letter word, isn't it? :-)

While it's not a message to the SCM, how about this:

Newsgroups: rec.radio.amateur.policy
X-MimeOLE: Produced By Microsoft MimeOLE V4.72.3110.3

To the Group:

We recently had to activate the EOC in our countyl. The entire county
was
under a mandatory evacuation for hurricane Floyd. I learned a few
real
world lessons and would like to share them here. A while back we had
a
discussion concerning emergency operations and what we would need and
do

should that occur. Some said that VHF would rule the day, and that it is
90% of emergency operations. Still others (like myself) said that HF was
more of a factor and that CW and other modes should play a part.

Well, we were all right to some extent. VHF was used extensively in
providing local information to the EOC via the local repeaters and
simplex.
That information was sent via HF (3975) to all parts of the state. HF was a
huge player in coordinating state resources during the evacuation. I am
told that something like 300,000 plus people left our local area. HF was
used to keep in contact with the shelters located hundreds of miles away,
with GEMA and with FEMA.

SSB and CW was utilized to pass informal and formal traffic to the SEC, GEMA
and FEMA. We can argue about this all day, but the fact is that both were
used as appropriate. Luckily, we had CW competent operators at our EOC and
reliable CW ops at all parts to receive the messages that came via that
mode. What mode was used the most? SSB, of course. But it was nice to
know that CW was still utilized when conditions dicated. As a matter of
fact, the last message out of the Chatham County EOC was sent to the SEC via
CW.

Since then, we have discussed the need for even more mode capabilities.
Things like HF packet and, yes even PSK31 have been tossed about. What we
learned with this real world situation is that *all* available modes should
be used and that relying on SSB or VHF only is a risky business.

Over this past weekend, we had a SET (Simulated Emergency Test) statewide.
A friend of mine attempted to send a simulated message to the Macon area,
about 180 miles away. He was running about 100 watts, but conditions were
very poor, and he wasn't getting through. So, he split his frequency,
setting up -600 on B, and sent the message via CW. The NCS in Atlanta

took
the message for the Macon station and answered via voice for fills.
(which
my friend could hear) It was very cool hearing the NCS talk to him.
"Got
it here Ed. All stations stand by while the CW station in Savannah
sends a
message to KR4OL" Ed said later that he would have used SSB, but he
just
wasn't getting through, so he thought he would try CW. (it worked)

Bottom line is that we should use *all* the modes we have available
and
maybe even incorporate a few that we haven't thought of before.

Regards,

Arnie -
KT4ST

END GOOGLE QUOTE

Note that Arnie was talking about a full-scale, wide-area emergency in
his neck of the woods (Hurricane Floyd, Georgia, 1999). Note also the
use of formal and informal NTS type messages for contact between the
county and state EOCs, GEMA, FEMA, etc. Most of all note that he was
there - it's a first-hand account, not a news blurb.

In other words, it ain't all HTs by any means. Widespread emergencies
need longer-distance comms. Which means HF/MF, when hams are involved.

Before anybody gets the idea that this quote is meant to prove some
point or other about code testing, I'll say that that's not what it's
about at all.

> > Kinda like I think hams
> > should have basic proficiency in CW so they can use that if need be, and
> > exposure to as many forms of comms as possible.
>
> I wouldn't place any bets on how many licensed hams are first exposed

> several I've worked in including my first. The reality is that ya take
> knowledge INTO FD, not OUT of FD. YMMV.

>
Our experiences are different, then. We'll see how the scores work
out. You gotta do 3000 points to beat the N2EY singlehanded record.
And that was made in 1995, near bottom of the cycle.

Large snip.

> To them the "hoops" are the Main
> Thing.

One thing that has irritated me (and I should state that it's not been anyone on this NG that has done this to me personally) is that there've been a couple of people who I've talked with on the air and via e-mail that were not willing to do a code conversation with me, because not only was I a beginner, but I am also one of the products of the slow code requirements. As if I had anything to do with the level of speed that is required to pass the test. Lucky for me that I found one nice person who was willing to slow down to my level so that I could practice it and we had a nice (but challenging for me) conversation.

While I am not pro- or anti-code testing, this indicates that some people out there in radio land have a serious attitude problem if they choose to blame us new operators for the way the rules have changed.

>Amateur radio was conspicuously missing in the 1994 damage
> area during the week following that earthquake. FEMA put in
> its fly-away sat terminals featuring video message boards for
> relatives of the victims. That was on TV news.

The only thing that was "conspicuously missing" was anyone taking the time
to blow trumpets and make grand proclimations.

>Others think that professional public safety communications
> "always goes down in an emergency and hams rush in to
> help save the day." [that's been said, in different words, but
> with the same obvious meaning, for years]

Quotes, please, Lennie.

> A problem with some hobbyists is that isn't
> enough glory reflection on them...they want the feel-good
> myth of Being Important/Better-than-average and organizations
> like ARRL serve that to them on a silver (somewhat tarnished)
> platter.

The "problem" here is a self-absorbed ex-radio technician who
self-worships his rather lack-luster "career" as being "better" than Amateur
Radio when the fact is that he doesn't realize he's trying to mix the oil with
water.

>Some hobbyists NEED emotionally-loaded redefinitions. The
> amateur radio "service" is very popular for self-grandiosement.

And it appears it also serves YOUR needs for the same reason, Lennie.

>And I'm pointing out that such political phraseology ("pool of
> trained operators") is just such a high-sounding, emotionally-
> loaded, political buzz-phrase.

No..you're trying to rationalize your rant into something reasonable
sounding when the TRVTH of the matter is that that very "political buzz phrase"
[it's nothing of the sort] has been proven FACT for almost NINE decades.

>Some amateurs DO consider themselves "superior" and have
> done so for years in here.

As opposed to an "amateurish" ex-radio technician who does the same thing?
OOOOOOPS! That would be YOU, Yuor Putziness!

>As a semi-professional
> writer (to other publications besides HR) since 1968, I don't
> take the trouble to polish everything for a final draft version.

Which explains why so MANY of yuor posts are rife with errors.

>>Okay, so you won't take the requirements to get the license, you won't get
>>one.
>
> Slight correction. I haven't taken the trouble to take an amateur
> radio license test. That wasn't my intention five years ago and
> it still isn't a personal goal. Why is that license, that
> certificate, so "meaningful" just to TALK about requirements?

Ooooops. Caught lying again.

Shall we ahve Jim re-post your own words, Lennie? The one's wherein you
stated you were getting an "extra out of the box"...?!?!

>I took a REAL test (commercial First 'Phone) in an FCC field
> office in Chicago in 1956.

The tests I took were real, too. No pass=No license. That's real enough
for me.

>That isn't, never was "my argument." I'm just arguing against
> the morse code test for an amateur radio license. Others,
> nearly all of them self-centered brain-dead old farts (thanks
> again, Jim) keep harping on "personal this" or "personal that."
> To them, the "personal" aspect is all they can argue about.

The personal part comes from being told by someone with no experience in
the matter how we SHOULD be doing things.

>Do I "know more about radio (and electronics) than the average
> person sitting for an AR test?" Probably so.

Not by eveidence herein.

>Taking a ham test to "show personal courage, committment,
> or dedication to the amateur radio community" is total brainless
> self-glorification any way one slices it. That "community" is not
> "owed" a damn thing by anyone and neither does that

It's not about showing personal courage, etc etc etc.

It's about participating. So far you are not. Your "posts" are merely
opinions of thrid-hand information. No experience.

>A few others, again BDOFs, insist on Taking The Test To
> Prove Something! To "prove" what? That I can approach
> their noble, divine accomplishments? In a HOBBY?!? ptui.

It's about participating. So far you are not. Your "posts" are merely opinions of thrid-hand information. No experience.

And quit spitting.

>Ah, but others, as yet unlicensed, "must prove their
> personal courage, committment, and dedication to the
> amateur radio community by taking a ham test!"

You keep citing a quote, Lennie. Who made it? No one in ehre that I remember......

>Fine. Excellent. Good on you. Amateur radio has always
> been a hobby, a recreational activity.

It's a hobby for some. A tool for others. A means to an ends for even others.

>Done that for 52 years. Don't have to now. "Work" is a four-
> letter word, isn't it?

So is "test". Is that why you can't seem to muster up the intestinal fortitude to take one?

This really isn't a policy question, but I figgered that some of the regulars here might know the answer to this question.

Regarding next weekend's CW contest-- is this generally for more experienced CW ops? Or do you get a bunch of the slower code on the bands at that time as well? I don't know that I'm going to try contesting myself (since I'm limited to the # of bands I can work on) but if I can be someone else's contact, it would give me good practice. Do the faster coders usually slow down for a slow coder's answer to their CQ, or is this not a good place and time to be answering CQ's if you're slow on the key? Just curious.

>Regarding next weekend's CW contest-- is this generally for more experienced
>CW ops?

To tell you the truth, I wonder how many of the high speed CW sgnals you
will hear are really "experienced ops" or "experienced programs"...!

Most of the higher speed ops will go lower in the band, Jackie. Work
upwards from .040 up early in the contest. (ie: 14.040). You might also try
the "Novice" sub bands, although I don't think folks go that "high" in the band
anymore.

>Do the faster coders usually slow
>down for a slow coder's answer to their CQ, or is this not a good place and
>time to be answering CQ's if you're slow on the key? Just curious.

Unless they think you are in a multiplier they need they will probably
skip past you anyway. Now on voice, that "YL" thing might get you more "Q's",
regardless of need...Just a male chauvinist thing, I guess!

Agreed. But the guy who banged his own drum got the money and fame. And only
now is the true story becoming widely known.
>
>Remember last summer's Enron commercials? The most successful and
>wonderful company on earth.

Shades of the 1920s....

>I'm a realist, guys. I don't expect to return to the '50s anytime soon.
>But there *were* some advantages.

Agreed. But it wasn't the licensing system that was the cause of those
advantages, in my view.

Heck, there were at least three license levels back in those days anyway:

Novices, with extremely limited privs and an upgrade-or-leave-the-air ticket.
(talk about incentives to learn!)

Technicians, who had no HF at all and not even all of 6 and 2 - even though
they'd passed the same written as the General

Generals/Conditionals, the vast majority

There were also about 40,000 Advanceds, at least some of whom were REALLY
ticked at having lost their top of the heap position in 1951-53.

And about 4,000 Extras, mostly "because it's there" types, or those in search
of the 1x2 at the end of the 25 year rainbow.

That period of "Generals and above get it all" lasted less than 16 years. Been almost 35 years since it ended.

I remember getting my first LM back in 1966 or so, and wondering why there were three full-privs license classes, one of which wasn't even open to new issues. Strange.

I'll ask again: What should the system look like if/when S25.5 disappears and FCC dumps Element 1?

>That's more of the "established working adult" vs the "starving unemployable
>teenager" pattern than anything else.

Sort of. You have to remember that in the time period of which W3RV speaks
(50s/60s) a Collins setup cost serious amounts of dough. Example: In 1958, a
75A-4 cost about $700 new - without the special reduction knob, and with just
one mechanical filter. This was back when a $5000/yr pre-tax income was
considered solidly middle class. And the 'A-4 was just a receiver! You don't
even want to think about what the matching KWS-1 transmitter cost.

Of course Collins was top of the line ham gear back then, like the FT-1000 or
an Orion is today.

>And some of the adult's demand that
>the teenager to kiss his ass.

Which just goes to prove 'RV's point. There was a "pecking order" or "class
system" back then, too.

Which would you rather have: a system based on skill and knowledge, (as
exemplified by license classes with serious tests) or one based on age and $$?

>Ever notice that the more accomplished
>adults are less likely to demand "respect" than less accomplished ones?

Sure. And they are also more likely to give respect, too.
>

From K4YZ:
>>Which means that no a code Technician class can know more than an only-coder
>>General.
>
> "Only coder"...?!?! Please provide a reference and definition.

The only coder only wants to do Morse code, contesting, and collect wallpaper. The only coder does not want to do anything technical, except possibly antennas.

> Since a General has to pass two written tests instead of one, your
>suggestion is silly.

No, its not. Since each test is very easy (even trivial) to pass, the written tests are meaningless. Therefore all the General and Extra licenses really prove is one learned Morse code.

> But what it does NOT do, Vipul, is say that "The radio art is solely
>achivement in technical development".

Yes, it does. The FCC rule book, biased towards Ham radio as it is, has a paragraph on each of the subparts. Operations is in a separate paragraph. It is solely achievement in technical development, because that's what the paragraph describes. The non technical goals are in the other sections.

Everything in the paragraph describes technical accomplishment. Seems to me, you need a definition of the phrase, a description won't be enough for you. Its a matter of reading comprehension.

> Yep...the >>ARRL's<< Rulebook. A lot of nice editorialization, tehre,

So, you admit the ARRL is biased! (Saying things like they did " editorialization ").

>Vipul, AND nothing that says "radio art" is solely "technical achievement".

If you believe it means something else, please give an example.

"Radio art" is always with the words technical achievement in the CFR 47. If you need an exact definition, I can't provide it. Since most people that use it understand its meaning, no formalized definition is provided. Its too bad you cannot understand the meaning of the phrase "radio art".

There are plenty of everyday emergencies in which radio amateurs use
SSB, FM and packet. Your discounting of trained amateur radio operators
is beyond silly.

> Operating a radio IN land warfare without much training was
> proven in the field in WW2 and all the minor wars (dozens by
> many countries) following. Warfare is a true 24/7 emergency
> environment regardless of our defunct diplomats redefinition.

That'd be "diplomat's". You keep making these errors, Len. War can be
24/7. You've never been a participant for 24/7. Your 24/7 activities
are pretty much limited to using oxygen and taking up space.

> >Now,
> >I don't know about others, but I certainly do not feel as if my

Right. Do the words "assumes the God-like status repleat with nobless
oblige
talk-downs to the peasants and infrequent Sermons on the Antenna Mount"
sound familiar? They should--they're yours. Try to clean up the
errors. You misspelled "noblesse".

> I define the "real world" as the here and now, where radio is

Quite a rant, Len old boy. I can almost see the flecks of spittle at
the corners of your mouth. You'll still need that morse at the moment
if you'd like to have HF access as a radio amateur.

> Ah, but I must "sit for the ham test" to "prove a committment

Incentive licensing wasn't perceived as a problem by me until a year or so after the intial phase took place in 1968. I was living in Shreveport at the time. I handled it by driving the 200 miles to Dallas and passing the Advanced exam. When incentive licensing started cramping my style in chasing DX on both SSB and CW, I took the Extra exam. Anyone still carping about incentive licensing thirty-five years after the fact needs more fiber in his diet.

Exactly!

I look at it this way: It's kind of like the person who paid $300 for a VCR
many years ago being mad at the person who gets an equivalent one today for
$100.

I ran into the same thing 35 years ago, from one or two hams. The funny thing
was that I later discovered that the real reason they didn't want a CW QSO with
me was that they couldn't do even 5 wpm any more.

>Lucky for me that I found one nice person who was willing to slow
>down to my level so that I could practice it and we had a nice (but

I go along with Steve's advice, Jackie. Most ops participating in the
DX 'test have some experience under their belts.

> >Do the faster coders usually slow
> >down for a slow coder's answer to their CQ, or is this not a good place and
> >time to be answering CQ's if you're slow on the key? Just curious.

Your main problem will be (if your code speed isn't all that high) to
decipher just who it is you are hearing. This is great practice in
bringing up your speed. If you find a station who is sending faster
than you think you can copy, concentrate on several of his CQ's, picking
up a bit more of his call each time. Once you've got his call, give him
a call at the speed at which you can copy. He'll likely QRS to your
speed or at least something slower than he's been using. He'll be
sending you a signal report (generally 599) and his power. You might
hear "KW" rather than "1000". Many ops will use "cut numbers" like
"5NN" rather than "599" and "5TT" for "500". Some (mostly Europeans)
will use something like "ATT" for "100" or "ATTT" for "1000".

Have fun!

Now *that* I understand. I've had the same thing happen. My solution was to "give up" the day, and run the GOTA station. Then at night, I'll take over when the only people left are the hard-core. So it helps the newbies learn how to operate properly, and the other stations get properly worked.

Vipul, you are way out there, pal. I know fellows who use only morse
but who don't do any contesting or collecting of awards. I know fellows
who enter contests but only on SSB. I know fellows who work toward
awards but who have never been near a key.

> The only coder does not want to do anything technical, except possibly
> antennas.

Again, I know fellows who use CW often or even always who are very
skilled technicians. I know people who aren't very technically inclined
but they knew enough to pass the exam--which is what counts. An amateur
license basically permits you to operate on the amateur bands. You can
build anything you like without one.

I submit that you have built up a false case based on a near total lack
of information on your part about what hams in your area (or any area)
do.

> > Since a General has to pass two written tests instead of one, your

> prove is one learned Morse code.

Are you attempting to make a case for retention of the morse exam?
You're doing a pretty good job. The written elements are not all the
same, Vipul.
The one you took to obtain your Technician license is much easier than
than taken by an applicant for the Amateur Extra. Since the five word
per minute code exam is ridiculously easy and since you think the
written exams are trivial, you should have your Extra by the next time
the exams are given in your area.

Thanks for the advice. What I am planning on doing is listening a lot a bit higher up in the band and just seeing who I can copy. If I can understand what I am hearing, then I might answer a CQ. If it's too fast, then I will at least concentrate on increasing my listening comprehension.

You have to start somewhere, Jackie. Go for it! Steve's advice about going higer on the band is good. If you CQ then whoever answers will already know the speed you are working at. And many others will slow down for you.

Poor baby. Keeps setting his "oil" on fire, then passing water. :-)

Tsk, tsk, tsk. Jealous that some have actually made a career
in radio and electronics and have actually had experience in
HF comm before you were even conceived? Poor baby.

Such a pity that the Loose Cannon can only talk-down others
who've done more in radio than he. Poor baby.

>>Some hobbyists NEED emotionally-loaded redefinitions. The
>> amateur radio "service" is very popular for self-grandiosement.
>
> And it appears it also serves YOUR needs for the same reason, Lennie.

Not "my needs," Sgt Putz. You need a place to vent, taking
out your frustrations on senior citizens. That's the brave
"hostile action hero." :-)

I'm just advocating the removal of the morse code test for any
amateur radio license...and also taking some badly-aimed
fire from uncivil radio amateurs whose skin is too thin for
newsgroups.

How was that purchasing agent job in that "big" cable TV
company? Get to do any real engineering design? Get any
patents awarded for that? Did you write articles in radio and
electronics magazines? No? My gosh, big fella putz-tosser,
shouldn't the radio world elevate you on some pedestal and
honor/worship your amateur accomplishments?!?

>>And I'm pointing out that such political phraseology ("pool of
>> trained operators") is just such a high-sounding, emotionally-
>> loaded, political buzz-phrase.
>
> No..you're trying to rationalize your rant into something reasonable
>sounding when the TRVTH of the matter is that that very "political buzz
>phrase" [it's nothing of the sort] has been proven FACT for almost NINE
decades.

Of course. All that the Loose Cannon can reference is good
old ARRL Letter news...and "CW saving the day in every
emergency because the professional comms always go down."

Gosh and golly, the big Cannon, being one of that big Pool,
should have gotten a medal-awarding military comms job,
right? He didn't? Oh, my, a veritable Congressional Oversight!
Call the Oversight Committee! Get that Medal of Freedom
ready for awarding!

"TRVTH" is from the old comic strip "B.C." The "U" always
(in the Roman fashion) engraved as a "V." Tsk, tsk, tsk,
still up-tight about losing the commission in the TN militia?

>>Some amateurs DO consider themselves "superior" and have
>> done so for years in here.
>

> As opposed to an "amateurish" ex-radio technician who does the same
>thing? OOOOOOPS! That would be YOU, Yuor Putziness!

Tsk, tsk, tsk. Outrage causes typos. Y-O-U-R.

It's been a long time since I worked (and got paid) for being a
technician. Been a design engineer longer than the Loose
Cannon was licensed as an amateur. No problem. The
poopie-suited T6 backseater got as far as purchasing agent.

>>As a semi-professional
>> writer (to other publications besides HR) since 1968, I don't

>> certificate, so "meaningful" just to TALK about requirements?
>
> Ooooops. Caught lying again.

I've not made any sort of appointment or request to take an
amateur radio test, anywhere, anytime. No lie.

Poor poopie-suited baby. Imagining "lies" again. Tsk, tsk.

> The personal part comes from being told by someone with no experience in
>the matter how we SHOULD be doing things.

Awww. Someone telling the Gunnery Sergeant Major of the
Tennessee State Militia Corps and mighty CAP Air Force
"how he should DO things?!? Tsk, tsk, tsk.

All old poopie-suit has to do is keep telling the FCC that only
a select few (of his approval) may comment on federal laws
and absolutely forbid any sort of talk by anyone not possessing
an amateur radio license.

>>Do I "know more about radio (and electronics) than the average
>> person sitting for an AR test?" Probably so.
>
> Not by eveidence herein.

Awwww. "Judge" throwing out evidence because he doesn't
like it? Tsk, tsk, tsk.

Note: E-V-I-D-E-N-C-E. Take a trank before posting....

>>Taking a ham test to "show personal courage, committment,
>> or dedication to the amateur radio community" is total brainless
>> self-glorification any way one slices it. That "community" is not
>> "owed" a damn thing by anyone and neither does that
>
> It's not about showing personal courage, etc etc etc.

No?!? The Hostile Action Hero doesn't demand "courage
under fire?" :-) Stop setting your oil on fire and passing
water. That's unbecoming a mighty officer in the TN militia.

> It's about participating. So far you are not. Your "posts" are merely
>opinions of thrid-hand information. No experience.

Surrrre...in order to get IN to ham radio, one has to be already
IN it...otherwise "no experience." :-) :-) :-)

Oh mighty radio person, tell us your award-winning designs
for purchasing parts? Let us know your big medals won in
the purchasing department where you got all that "experience
in engineering." Tell us all about the decorations you won as
a military communicator during all those "hostile actions."

> It's about participating. So far you are not. Your "posts" are merely
>opinions of thrid-hand information. No experience.

Note: T-H-I-R-D, not "thrid."

Tsk, tsk, tsk. Rage and anger sure mess up the Cannon's roar.

Okay, so one can't get IN to ham radio without already
being IN ham radio. Did you connect a couple neurons
and "design" your own oxymoron? Or did you turn off
the oxy?

> And quit spitting.

Why not? "Ptui" rhymes with "Putz." Both 4-letter words.

Big brave "seven times in hostile action taking fire" poopie-
suit can't take SPITTING?!?!?

Tsk, tsk, tsk.

> It's a hobby for some. A tool for others. A means to an ends for even
>others.

The aphorism is "a means to an end." You stuck your S on the
ending. :-) :-) :-)

Ham radio is a TOOL?!? Oh, my, all those Licensed Toolkits!
:-)

> So is "test". Is that why you can't seem to muster up the intestinal
>fortitude to take one?

Poor baby. The doctor Kildare wanna-be who likes to play doctor but is afraid of pre-med school. The "engineering expert" who never got beyond purchasing agent for a TV company. The Great Communicator who never did any military communications...but had this "commission" in the TN state militia. The "hostile action hero" on paper, lots of pretense, uniform-wearing, cussing out seniors who've done more in radio than he. :-)

Old poopie-suit "challenges" someone? [nothing new...he can't accept a challenge to debate a subject or SPELL calmly when enraged and upset... :-)]

The few, the proud, the hams?

Temper fry...

Some might be like the resident bus driver, saying "ham
radio (as he knows it) is not for you!" :-)

>While I am not pro- or anti-code testing, this indicates that some people
>out there in radio land have a serious attitude problem if they choose to
>blame us new operators for the way the rules have changed.

Those "attitude" people DO exist. Some are carbon copies
of the regular BDOFs in here.

That's a negative inducement to enter amateur radio. Perhaps
that is really what they want? Keeping newcomers out will
(in their perverse way) "secure their position" in ham radio. :-)

Think about this for an attitude: Perusing practically any issue,
any year, of ham radio periodicals with pictures of hams and
their stations shows that they are predominantly white and
male. :-)

But neither of those problems are going to go away. The blue dress is a past that cannot be changed, and there is no move towards removing incentive licensing. Therefore, I think the point is that to continue to dwell on either is somewhat useless.

No. It's supported by Google as well as on everyone's
screen.

>Your statement is unsupported by fact. Additionally, you are no more a
>player in the ARRL than you are in amateur radio.

Ah, true. Do you still play in ham radio, colonel?

[broadcasting music isn't allowed by the rules...]

>Unsupported by fact.

Supported by observation. You need a supporter.

>We'll chalk this one up to just another thing of which you aren't really
>knowledgeable.

More knowledgeable than the defunct diplomat is about
working HF comms according to procedure.

>There are plenty of everyday emergencies in which radio amateurs use
>SSB, FM and packet. Your discounting of trained amateur radio operators
>is beyond silly.

What, that "everyday" emergency action was written up
in MAD magazine? :-)

>That'd be "diplomat's". You keep making these errors, Len. War can be
>24/7. You've never been a participant for 24/7. Your 24/7 activities
>are pretty much limited to using oxygen and taking up space.

Oh? You "know" about "war," defunct diplomat?

Did you participate in Hostile Action like the Hero in the
poopie-suit?

Wow, the diplomat-that-never-was is really milking his own
little definition of a common euphamism, isn't he? :-)

>Pssst--Jackie! He means "perceived by him".

Don't let the cashew brandy go to your head, diplomat.

Jackie can understand. Poor baby, you can't...

>That'd be your opinion once again, Leonard? It really sounds like the
>attitude of one who is frustrated that mere radio amateurs won't give
>him what he feels is his due.

Nothing is "due" me, colonel. Problem is your chains got
pulled a long time ago when you innovated order-wires at
State in some truly third-world posting. Tsk, tsk, tsk.

>Try to clean up the
>errors. You misspelled "noblesse".

Yes, your haughtiness. As soon as you complete your
Remedial Arithmetic. Remember? 7 x 24 = 168.

"24/7" is a common American phrase that includes being
on call and having to work at any time when directed. It
isn't your peculiar redefinition. Sure, I typoed "noblesse,"
now you "oblige" by trying to be a civil human instead of
a hammy version of Ugly American to Americans.

>Amateur radio isn't magic or supernatural. It has known physical
>properties.

Amazing! An ex-government employee who actually
LEARNED something!

>You aren't involved in it.

With all you Nobles obleging yourselves as Ham Gods,
it's unlikely I would be. It wasn't on my agenda for
Things to Do Today. Or tomorrow.

With such diplomacy and decorum, why doesn't the
colonel take a job with ARRL getting new members? :-)

>Unsupported by fact.

A macro? Your pension doesn't pay for supporters?
What?

>Unsupported by fact.

Tsk, tsk, tsk.

>Unsupported by fact.

Insufferable by repetition the colonel is...

>Then feel free to go and be of help to your nation, community or
>whatever.

Did it, doing it, and the exportation of undesireable diplomats-
that-never-were are high on that list.

>A hit's a hit. Why don't you take a few minutes and describe for Jackie
>how you are an uninvited "advocate for..."

You are mainlining? Don't shoot up and post, colonel.

>Quite a rant, Len old boy. I can almost see the flecks of spittle at
>the corners of your mouth.

Wild imagination. Having bad dreams about "hostile action,"
diplomat-that-never-was? Or was that your poopie-suited
buddy? Have him give you one of his tranks. You need it.

>You'll still need that morse at the moment
>if you'd like to have HF access as a radio amateur.

I'm not after a license, colonel. I'm just here advocating
elimination of a morse code test...and to watch you
up-tight anal-retentives get all upset when your thin,
thin skin gets bruised. :-)

>Uh, the Commission seems to think you'll still need to pass the exams,
>Leonard.
>It isn't just politcal hype.

Oh, my. The "teacher" speaking or the poor ex-diplomat-
that-never-was and continues-to-be?

7 x 24 = 168, not 148.

>No, you'll just need to do it in order to become a participant. Until
>then, the only place you can indulge in dumb little games of
>one-upmanship through frequest mention of your professional credentials
>is...here.

Poor baby. Still upset are you? The diplomat-that-never-was
is the one indulging in dumb little games in here.

>N2EY: "Besides, here's a simple, plain fact:
>
>No matter what job, educational level, employer, or
>government/military service that a radio amateur has, if said radio
>amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
>Anderson's insults, ridicule, name-calling, factual errors, ethnic
>slurs, excessive emoticons and general infantile behavior."

Yes, another overly-proud BDOF who can't take return
fire. No doubt because he wants to hide in his
"undisclosed location" where he works, waving all his
certificates around over his collection of chassis punches.
:-)

Now, back to the subject...which Altar do you want to be
worshipped at this week?

>

I'd like to see a beginner's class and a regular class and that's it. Kind of like driving a car where you get a learner's permit with restricions and when you can show you know the ropes, a regular driver's license.

Just having a driver's license doesn't mean you're Richard Petty. It means you know enough to not be a menace on the road. I'd like to see something similar with ham licenses.

If I were making the rules for the FCC, I'd focus lots more on good operating techniques and less on the technical stuff. I'd rather have a new ham understand how to correctly tune an amplifier than to know Ohm's law, for example. Memorize the band edges instead of antenna patterns. How to work split instead of how to calculate impedance.

The technical stuff is fun; in fact it's my favorite part of ham radio, but I'm not convinced it should be a priority in licensing.

>> "Only coder"...?!?! Please provide a reference and definition.
>
>The only coder only wants to do Morse code, contesting, and collect
>wallpaper.
>The only coder does not want to do anything technical, except possibly
>antennas.

No reference. Vipul is certainly NOT an engineer.

And I know DOZENS upon DOZENS of NON-CW operators who "collect
wallpaper", like to contest, and could give a rat's kazoo about ANYTHING
technical, INCLUDING antennas.

So how does THAT fit into your "only coder" rant, Vippy?

>No, its not. Since each test is very easy (even trivial) to pass, the written
>tests are meaningless. Therefore all the General and Extra licenses really
>prove is one learned Morse code.

And again you are reminded that even the code tests can be "beaten", ergo
you STILL have proven nothing, Vippy. And upon whose "opinion" do you declare
the written tests "very easy (even trivial) to pass"...?!?!

Seems there's still a significant number of folks who can't get past THAT
"hoop".

>> But what it does NOT do, Vipul, is say that "The radio art is solely
>>achivement in technical development".
>
>Yes, it does.

I can see you're back on the merry-go-round and still have not cited a
quote that says ANYTHING like "radio art is solely technical achievement".

Need a meclizine?

>> Yep...the >>ARRL's<< Rulebook. A lot of nice editorialization, there,
>
>So, you admit the ARRL is biased!

(Whew) WHERE do you get THAT from, Vippy?

>>Vipul, AND nothing that says "radio art" is solely "technical achievement".
>
>If you believe it means something else, please give an example.

I am not the one making the certain assertion that it does. I am asking you to prove your assertion. So far you have quoted a passage from an ARRL textbook that certainly mentions technical achievement, but does NOT substantiate your claim anywhere near a certainty.

>"Radio art" is always with the words technical achievement in the CFR 47. If
>you need an exact definition, I can't provide it.

Ahhhhh...an admission of NO FACTS. Finally..a breath of fresh air.

>Since most people that use it
>understand its meaning, no formalized definition is provided. Its too bad
>you
>cannot understand the meaning of the phrase "radio art".

"The radio art" is ALSO meant the employment of the radio in any myriad of applications, Vipul. It is the manner and the skill with which radio is utilized to achieve any one of hundreds of goals.

THAT is art.

>>>Others think that professional public safety communications
>>> "always goes down in an emergency and hams rush in to
>>> help save the day." [that's been said, in different words, but
>>> with the same obvious meaning, for years]
>>
>> Quotes, please, Lennie.
>
> Go get your own from Google. Hundreds of them there

Oh no, Lennie, it is YOUR assertion that "others" say public service communications "always" go down and that 'hams" rush in to save the day.

I'd like to see YOUR evidence to support YOUR assertion.

>Such a pity that the Loose Cannon can only talk-down others
> who've done more in radio than he

Are we talking about "others" or you, Lennie. If it's "others", I'd like to see who it is you think I've talked down to. If it's you, your three years in the Army are STILL not anywhere NEAR the years I have spent on HF or anyother band OPERATING radios.

>You need a place to vent, taking out your frustrations on senior citizens

You spelled "senile" wrong, Lennie.

>I'm just advocating the removal of the morse code test for any
> amateur radio license.

No, you're lying.

>..and also taking some badly-aimed
> fire from uncivil radio amateurs whose skin is too thin for
> newsgroups.

I think the "fire" is well aimed, Your Putziness. And with the exception of Brain (who doesn't know the difference between "authority" and a "butterbar') and Vippy (who doesn't know anything), I'd say it's all aimed at you, Oh Sleazy One.

>How was that purchasing agent job in that "big" cable TV
> company?

Enjoyed it while I was there. Anyone should have the benefit of leaving a healthcare profession for some period if they so desire...especially after the death of a loved one.

Please notice I AM back in the SAME job as before...As a nurse.

>Get to do any real engineering design?

Nope.

>Get any patents awarded for that?

They issue patents for not doing anything? BUT OF COURSE! You have one, don't you...?!?!?

>Did you write articles in radio and electronics magazines?

Nope. I hear you did, but that magazine went belly-up.

Nice shot.

>My gosh, big fella putz-tosser,
> shouldn't the radio world elevate you on some pedestal and
> honor/worship your amateur accomplishments?!?

Are you insinuating that we should elevate YOU, Lennie? Sure sounds like it.

>Of course. All that the Loose Cannon can reference is good
> old ARRL Letter news...and "CW saving the day in every
> emergency because the professional comms always go down."

Ooops...there goes Lennie "citing" quotes that were never made again.

>"TRVTH" is from the old comic strip "B.C." The "U" always
> (in the Roman fashion) engraved as a "V."

Yes Your Gayness, we know.

>Tsk, tsk, tsk,
> still up-tight about losing the commission in the TN militia?

"TN Militia"...?!?!

>Tsk, tsk, tsk. Outrage causes typos. Y-O-U-R

From the grand typoist himself. Shall we revisit Dave's recent highlighting of some of YOUR errors, Lennie?

>It's been a long time since I worked (and got paid) for being a
> technician.

Thank God for that.

>Been a design engineer longer than the Loose
> Cannon was licensed as an amateur.

Speaking of which, let's consider what happened to "American Engineering"
while His Putziness was "on watch" as an "engineer":

The Soviets beat us into space with an unmanned probe.

The Soviets beat us into orbit with a manned craft.

The Soviets beat us into space with a manned space station.

The Japanese put practical consumer electronics into every American home,
causing the collapse of countless American firms.

The Red Chinese managed to not only get "the bomb" while Lennie was an
engineer, but developed technology to deliver it to the United States, all the
while stealing it from American "engineers" who were more intent on their
401K's and retirement homes in Southern California.

Nice job, Lennie. Hope you're comfortable.

>> Which explains why so MANY of yuor posts are rife with errors.
>
> "Rife with errors?!?" Note: Y-O-U-R.

I am not the one making the claim to be a "semi-professional editor"
either, Lennie...You are...

>>> Slight correction. I haven't taken the trouble to take an amateur
>>> radio license test. That wasn't my intention five years ago and
>>> it still isn't a personal goal. Why is that license, that
>>> certificate, so "meaningful" just to TALK about requirements?
>>
>> Ooooops. Caught lying again.
>
> I've not made any sort of appointment or request to take an
> amateur radio test, anywhere, anytime. No lie

Yes...a lie, Your Gutlessness. Shall we once again re-post YOUR assertion
that you were going to get an "extra out of the box"...?!?!

In the above paragraph you state "I haven't taken the trouble to take an
amateur radio license test. That wasn't my intention five yeas ago and it
still isn't a personal goal".

Obviously you are eithr lying now, or you were lying when you made the
assertion to get "an extra lite".

Which was it?

>Poor poopie-suited baby. Imagining "lies" again. Tsk, tsk.

Nope....reading them right there in front of me...Straight from your
keyboard to my screen.

>Awww. Someone telling the Gunnery Sergeant Major of the
> Tennessee State Militia Corps and mighty CAP Air Force
> "how he should DO things?!?

Whew. Some pique there, Lennie!

>Oh mighty radio person, tell us your award-winning designs
> for purchasing parts? Let us know your big medals won in
> the purchasing department where you got all that "experience
> in engineering." Tell us all about the decorations you won as
> a military communicator during all those "hostile actions."

If any of that were pertinent to Amateur Radio, I'd be glad to.

Now, WHAT was it you had to offer US that is pertinent to Amateur Radio, Lennie? OTHER THAN, of course, the usual "back in 1953" war stories about how the unit you were in in JAPAN suffered all those KIA's in KOREA, three years before YOU got tehre?

And PLEASE, tell us how any of that is germane to your CLAIMED intent of changing the Morse Code requirements in Amateur Radio.

>The doctor Kildare wanna-be who likes to play
> doctor but is afraid of pre-med school.

OK...I'll wait to see where you pulled THAT from.

>The "engineering
> expert" who never got beyond purchasing agent for a TV
> company.

"TV" company? What TV's...?!?!

>The Great Communicator who never did any
> military communications...but had this "commission" in the
> TN state militia.

Yes, I did "military communications" while on ACTIVE duty, Lennie, and as an enlisted.

>The "hostile action hero" on paper, lots of
> pretense, uniform-wearing, cussing out seniors who've done
> more in radio than he.

Your sole claim to "have done more in "radio" is, by current evidence, limited to military duties in 1953-56. If you are the senior you are refering to, then your claim is hollow.

>The few, the proud, the hams?

Yep. Leaves you out.

Steve

Interesting. That's only one less class than we have now (for new license
issues, anyway).

Would you make the beginner class 10-year-renewable, or something else, like
the old Novice?
>
>Just having a driver's license doesn't mean you're Richard Petty. It

Understood. I presume that you would match the test requirements to the
privileges granted, too. Example: Beginner's license doesn't allow high power,
but also doesn't include a lot of RF exposure questions. Am I on the right
track?
>
>If I were making the rules for the FCC, I'd focus lots more on good

Interesting concept! Of course some techno stuff is needed in order to
understand the rules (knowing the band edge is at 7000 kHz doesn't mean much
unless ou know what a kHz is). But more focus on operating might be worthwhile.

>The technical stuff is fun; in fact it's my favorite part of ham radio,

My other hobby (amateur astronomy) has a higher proportion of male participants as well. The more I listen to the HF bands, the more YL's I hear. I was listening to quite a few women on the 10-10 Net yesterday. I don't care which gender the people are that I talk to, what counts is that they are nice and fun to talk to. I've never met a more helpful crew of people than I have in AR. I have some new friends coming over to help shoot a dipole up into a tree because I didn't quite know how to do it myself short of renting a cherry-picker. I didn't even have to ask, they just offered to come over and help.

Thank you, Jim. I expected massive incineration and instead get
reasonable, well thought out comments. How nice!

To answer your questions:

1. I envision the Learner's class like a driving learner's permit. You
only have so long, then you either upgrade or take the bus. The purpose is
to learn and qualify for the "regular" license, not to operate in
restricted mode forever.

2. Correct about beginner's licence restrictions. A beginner doesn't need a KW to learn radio. Doesn't need a bunch of bands or modes (like satellite) or other fancy stuff. When you're learning to drive, you don't need a Ferrari, a Chevy will do fine. Once you show you can do it responsibly, enjoy the Ferrari!

3. Also correct about the tech stuff overlapping the operating stuff. Whoever puts the actual tests and restrictions together needs to be a cut above the typical lazy bureaucrat.

Both Steve and Dave have offered very sound advice, I've been in it
many times and I'll offer my two cents worth too. The ARRL dx cw
contest is a pretty brutal affair even for the experienced high-speed
ops with big stations. And there are some really lousy operating
practices involved. It is a highly competitive radio sporting event
with all the connotations which go with a major competition in any
sport.

I can easily imagine a first crack at this contest being very
discouraging. If you do jump into the thing don't let yourself become
discouraged. None of us were born with any of the skills required to
be competitive in any dx contest. We all started right where you are
now in this game, ground zero and you can do it too. But ya can't
acquire the skills if ya don't perservere. My suggestion is if you
find yourself not being very successful at actually working the dx
forget the paddles and turn it into a listening contest with yourself.
The fact of the matter is that this contest is 95% a listening contest
anyway. So see how many countries you can identify & log, push your
code speed envelope, use it as an educational experience vs. a
competition.

If you do get into it I'd be interested in seeing a post about your
experience after the 'test.

> Ya missed the point.
>
> Copying a 100+ word bulletin sent at a specific time and freq with no
> repeats or fills

On CW ya need a clock, a rcvr and a pencil. What's the big deal about
that? If ya do it right though ya go "File, Mode", select RTTY on yer
logger screen and get it over with in seconds and get back to the run.
And for this ya get a 100 bonus points?? Beats me.

> requires a different skill set than running QSOs
> where the exchange is three pieces of info like "W1ABC 4A EMA"

The only difference is in the patience the individuals have for
participation in pointless pushups which don't do anything for anybody
and prove nothing.

> Composing and sending a coherent message
> requires a different skill set as well.

Now I'm really lost. I think you're postulating that twitching the
paddles for a quick contest exchange requires a different skill set
from twitching the paddles to send a "coherent message"? NOT.

> Ditto the pointless "Message from w1aw" thingey.

> Not pointless at all. And it's a bulletin, not a message.

I see. A w1aw bulletin is not a message. Or is it that a message is
not a bulletin? WTF??!

> > But are you gonna take DELCOM into the ham bands during this year's
> > FD?
> >
> Not my bag this year. But somebody else might. More power to 'em if
> they do. What's wrong with an operating activity that is aimed at the

The same thing which was wrong with some uncountable number of failed
corporations which wandered too far from their core businesses.

> > Who are you kidding?? How are you gonna run in FD this year?
>

> Probably a CW transceiver powered by a battery. If I see a good deal

> And if a couple of EOCs and GOTA stations get on, there will be that
> many more stations for me to work and get points from.

There's a noteworthy rationalization.

> How many points did you score last year, compared to my operation?

Pffft! That silly shot was about as lame as they come. My radio blew
up ten minutes into the event. Duh? Shouldn't happen this year, new
reddio. Slick little boy toy, I can punch a button, jump off 15ssb and
be all over a satellite in seconds. If I choose to do that of course.
Do you have those choices? Either of 'em??

> > > Having all the catgeories and such is meant to widen the scope of FD.

> otherwise.

I see. One of the objectives of FD is to get the couch potatos out of
the house. I missed it, on which page the FD package is that objective
mentioned?
I need more pages. Did I miss downloading an appendix or something?

> You shoulda been there when I was doing the one-man deal back in the

Yeah, yeah, and you ougta been there when I was rolling EUs on 80 wih
my ARC-5. Without any 866s.

> > which is why we both opted away from the annual k3mn "radio
> > picnic".

>
> The reason I opted out was because there was no plan, and I wasn't
> going to be the planner.

Now wait a minnit here . . you've already stated that you're not going
to run with the Clayton Park bunch but you have no idea what their
planning will be like on this pass. I smell a fishy tale. A very old
dead fish.

>
> I like the picnic idea.

So do I. I've already insructed my cook to do another Saturday nite
Cajun filet for FD.

> I think I got more FDs with that bunch than you have FDs. They weren't
> at an EOC, anyway.

> > I can see the k3mn squad moving the operation from Clayton Park to the
> > courthouse front lawn so that they can compete in the F class.
>
> Not an EOC, won't count.

You're right, somebody moved DELCOM from the courthouse cellar to Fair
Acres when I wasn't looking. I'd like to be there when the MN squad
asks the DELCOM Honcho Grande to let 'em set up an EOC FD operation in
his bunker. One of his kids got busted by the FCC for spamming the
the machines with a bogus callsign and no license. Several years after
I sent the DA up his butt over a ham radio related problem I had with
him. You think the Putz is anti-ham? Try that dude!

Won't count 'cause it ain't never gonna happen no way no how.

> > This
> > one is almst as good an idea as the Diamond Club.
>
> Remember the "mobile aggregate score" thing?

Certainly. Reinforces my dim view of the whole thing.

>
> There useta be two FDs per summer, way back in the mid 1930s. Early
> June. late August.

That would be kewl, I like it. If ya can't make it June ya still have
a shot at it.

> > Lemmee guess which event you'd jump all over . .
> >
> I'd do both.

I'd do both if the MN bunch ran a k3jv type FD.

> The picnic thing with a club, the other as a serious
> single op. Heck, the first would be a warmup/testout for the second.

The ARRL cw dx blast is this weekend, there's yer "warmup" for FD. Has a QRP entry class, go for it . . . no? Why not?

> My biggest complaint about contest exchanges is that they're too dang
> simple. Callsign, class, section, all repeated over and over, 3 pieces
> of info, whatta weenie way to make points.

Fly that one past the 200/hr dx contesters and duck. Fast.

> Lookit SS: Unique serial number, class, callsign, check, section.
> Five pieces of info, one of them unique to the QSO. Back when I
> started, there was a sixth piece of info in the SS exchange, the date
> (month and day of yer birthday).
> I say make the exchanges longer. More credit for actual messages
> handled.

What does a bloated exchange add to the event? Answer: Nothing. It slows the whole operation down is what it does for reasons which compelely escape me.

> Have W1AW send several different FD messages.

I thought w1aw sent bulletins, not messages. ??

A nocode can scarf up w1aw "messages" all day with RTTY and SSB.

> Allow multiple
> power levels at the same multi-multi.
>
> If all FD does is get some sedentary hams outa their houses and
> exposes them to some fresh air, it's a good thing. If maybe they learn
> a skill or two, all the better.

That's mostly why I'm planning on doing FD except it'll be for exercising the skills I already have which I sure as hell didn't pick up at any FD event.

> Your '897 show up yet?

It's an 847 it's been right here for a week. The 500Hz Collins and 2.1 Khz ssb xtal INRAD filters are at the post office waiting to be picked up today. I'll swap the Collins filter for one of his 400Hz xtal filters when he has 'em available again. Now all I gotta do is switch out the CPU in the LDG autotuner for the new chip which communicates with the 847 and I'll have TS-940 style 150w autotuning 160 thru 10.

> > tied up with their traffic handling via CW fantasies.
>
> Unsupported by fact.

Actually, the use of CW by hams in traffic handling and emergencies
has been well documented here in the past few years. By first hand
accounts. The accounts show it to be a once-in-a-great-while sort of
thing. I for one have repeatedly stated that the idea that all hams
MUST know code because they MIGHT need it in an emergency is simply
not reasonable.
>
> > Licenses in amateur radio are NOT absolutely required to

>
> We'll chalk this one up to just another thing of which you aren't really
> knowledgeable.

The important point is that hams do not use utility, police or fire
HTs. And amateur radio emergency and public service comms go far
beyond using an HT.
>
> > Please don't start in with this "pool of trained operators"

> 24/7. You've never been a participant for 24/7. Your 24/7 activities
> are pretty much limited to using oxygen and taking up space.

You missed the point, Dave.

Ham radio is not part of the military. Soldiers don't have to buy
their own radios. Hams do. End of story.
>
> > >Now,
> > >I don't know about others, but I certainly do not feel as if my

>
> Pssst--Jackie! He means "perceived by him".

Seems pretty clear to me that Len lumps all who disagree with him on
the trivial issue of code testing into a category called "PCTA". To
him, all "PCTAs" are the identical, and deserving of nothing but his
contempt and insults.
>
> > You've not perceived that I was never
> > criticizing the ham hobby en toto, just the minority who

The important thing is that Len presents his non-amateur experience as
proof. It isn't.
>
> > I define the "real world" as the here and now, where radio is

>
> Amateur radio isn't magic or supernatural. It has known physical
> properties.
> You aren't involved in it.

The main reason hams do ham radio is because it's fun. Len wants to
dictate what we should think is fun.
>
> > >I somehow doubt that most AR ops see the ARRL as some sort of divine oracle

>
> Then feel free to go and be of help to your nation, community or
> whatever.

The point is that Len repeatedly minimizes and dismisses the help and
public service performed by hams using ham radio.

There was a first-hand account posted here about the search efforts
for Columbia wreckage and the role hams played in supplying
communication. Factual, clear, and concise.
>
> > >You're not

Most of the pejorative-hurling has been done by Len, though.

> > career to engineering early on in my life, did my whole career
> > mainly in design engineering.

We have all heard that story many, many times. What has not been
explained is how it makes Len an expert on amateur radio, or amateur
radio policy. It also does not prove any of Len's arguments for or
against anyhting connected with amateur radio policy.

Suppose someone who is older than Len and more experienced than Len
shows up and says Len is all wrong in his amateur radio policy views -

simply because that 'someone' has more time-on-the-planet and
time-in-radio than Len. Does that prove Len is wrong? Of course not.
Neither does Len's time-on-the-planet and time-in-radio prove any of
his opponents to be wrong.

Does Len's time-on-the-planet and time-in-radio somehow give him the
right to hurl pejoratives the way he does, even against those who do
not reply in kind?
He thinks it does.
>

Who? Give us some quotes.

> > They
> > insist on "qualifications" by virtue of the ham license...as if
> > none of the past half century's personal experience had any
> > relevance.

Not at all. The license requirements are the same for everyone. A Ph.D
in EE doesn't get a bye on any of them. Nor does Len.

> > I am supposed to learn morse code because,
> > according to the PCTAs, that is the ultimate meaningful skill
> > of their little detached Brotherhood of Radio.

Who says that? Not me - in fact, I posted a whole long list of
desirable radio operating skills.

Give us some quotes.

> > Morsemanship
> > wasn't relevant to the needs of the rest of the radio world of
> > fifty years ago

Really? Back in 1953 there was no use of morse code in radio outside
of ham radio?

A lot of historical accounts say that's just plain wrong. Sure, the
use of Morse code by non-amateur radio services has steadily decreased
since the end of WW2. But to say it "wasn't relevant to the needs of

the rest of the radio world of fifty years ago" simply doesn't mathc
the facts.

> and it sure as hell isn't meaningful today.
>
> Quite a rant, Len old boy. I can almost see the flecks of spittle at
> the corners of your mouth. You'll still need that morse at the moment
> if you'd like to have HF access as a radio amateur.

Point is, an amateur radio license is or amateur radio, not "the rest
of the radio world". Test or no test, hams use Morse code. Len thinks
that's bad.
>
> > Ah, but I must "sit for the ham test" to "prove a committment
> > and dedication to the amateur community!"

Who said that? Give us the quotes.

> > I'm sorry, but that is

Who said they do?

> > Ham radio does NOT need any morse code test for a
> > license or even any morse code skill at all.

Ahh, now we get to what really bothers Len. It's not just the test.
It's the idea of hams using Morse code at all.

> > It isn't some
> > magic pool of trained whatevers. That's just political hype.
> > Ham radio is a fun hobby, an interesting one, a recreation.

Notice how Len denies the help provide by hams in things like
hurricanes, ice storms, and searches for shuttle parts.

> > It doesn't need to be bogged down by beaurocracy, rigid

> > discarded their real names, wanting to be identified only by
> > callsigns.

Who?

I sign all my posts 'Jim, N2EY'. That's because my name is Jim and most hams know me first as N2EY. There are a lot of Jims but only one N2EY. This is an amateur radio newsgroup, so identification by callsign makes perfect sense.

Yet Len insists on calling me a whole string of names he made up. He even went to the database to find out my last name. Is that the action of a mature individual whom we hams should look to for guidance, advice, and policy?

> > Identity transferrence, achieving something better
> > than their present lives and social position.

Can't be talking about me, then. Present life and social position are pretty good.

> > location, or anyone else, that coveted amateur ticket won't
> > be bought to radio never-neverland this week or next week.

Perfect example of Len's behavior towards those who dare to disagree with him.

Let's see:

"the defunct diplomat" - served his country for ~20 years as a key communications officer in the State Department at a variety of postings, including Dar-Es-Salaam and Helsinki. Still healthy and active despite description as 'defunct'. Long time active ham, (DX, contests, VHF/UHF) but not qualified to disagree with Len.

"the bus driver" - served his country for ~18 years in the Air Force at a variety of locations, including Germany. Earned a bachelor's degree while working fulltime. Long time active ham, (DX, contests, ragchews, digital modes) but not qualified to disagree with Len.

"the hoagie muncher" - earned BSME and MSME degrees, has worked in his field for ~40 years, including military contracts such as aircraft carrier catapults.
Long time active ham (DX, contests, ragchewing, antenna mechanical design), but not qualified to disagree with Len.

"the dill sergeant" served his country for ? years as an avionics tech in the Marine Corps. Earned the requisite degrees and licenses to be an emergency room nurse, which became a second career. Long time active ham, but not qualified to disagree with Len.

"the reverend" - earned BSEE and MSEE degrees, has worked in his field for 27 years. Long time active ham,(contests, ragchewing, homebrewing) but not qualified to disagree with Len.

> > or anyone else, that coveted amateur ticket won't

>> I doubt that Vipul could make the grade in the Marine Corps, and there
>is
>> no such thing as the "Tenn Militia".
>
>The militia you're a member of is not the Tennessee Militia?

(1) I am not a member of any militia. I WAS a member of the Tennessee
State Guard

(2) If there is an organization calling itself the "Tennessee Militia" ,
I am not aware of it's existence.

Lennie refers to the Tenneessee State Guard, organized under the Military
Department of the State of Tennessee, responsible to the Govenor of the State
of Tennessee, and under the command of the Adjutant General of the State of
Tennessee.

I am not a member of that organization. I AM a member of the United
States Air Force Auxilliary/Civil Air Patrol, chartered by the Congress of the
United States and headquartered at Maxwell AFB, AL.

As I said before, Brian, YOU need to have some OTHER source for your
"facts" than Lennie's rants. You are obviously ill prepared, nor are you "up
to date" on current affairs.

Please try to exceed my expectations, OK?

Steve, K4YZ

> properly worked.

Here's another idea I've seen and used effectively, long before GOTA:

Experienced ops get paired with newbies.

1) Experienced op does everything while the newbie watches.
2) Newbie takes over logging, which gives him/her something more to
do, but is backed up by the experienced op. (Paper and PENCIL logs
recommended!)
3) When the pile thins somewhat, newbie operates while experienced op
logs.
4) Newbie does the whole thing while experienced op watches.

I've done this on both 'phone and CW and it works. Of course the
newbie must have some CW skills to get past 2).

Last time I was in a multi-multi FD, a 12 year old Extra showed up on
Sunday morning. He knew 20 per but didn't have much in the contest op
skills department. So I had him sit down and watch me, then gave him
the log, and finally the key. Good experience for all concerned.

I've seen gobs of it in the adult-to-adult sphere too, megabucks goons
dissing those who are in much lower economic income brackets. The
worst of those are the dweeb$ who simply inherited their wads, we have
several of those in the neighborhood.

This contest is the ARRL DX CW. It begins this evening at 0000z or 7pm EST, 6pm CST...etc.

What you do in THIS contest is USA and Canada works DX ONLY. NO USA OR CANADA contacts.

The advice given has been good. Jump in and have fun...But be advised this is a MAJOR EVENT and is a bit cut throat. Expect to be stomped several times.

I will be entering it 40m only.

But have to take the sweetie out this evening and will get a late start.

Have fun.

That bill was by far the most threatening ever by a long shot, the
rest were bureaucratic shuffles in comparison.

The WW1 shutdown included receivers.

So?

> Getting transmitting
> licenses took more work.

Yeah, yeah, and we had to do more work to get our tickets than we
would now.

> >How much column space did QST give Gernsback, Fleming and Marconi (vs.
> >Hiram Percy) for their efforts?
>
> Not much! How much space did Gernsback give ARRL in his many publications?

I sure read a bunch of his Pop Science mags which got into ham radio
and in every case I recall there was a refernce to the ARRL. In fact I
think in reading one of those articles was when I discovered that ARRL
existed.

Here's a squib to ponder:

"An immigrant from Luxembourg in 1904, Hugo Gernsback played a major
role both in fostering the amateur radio movement and in creating the
American science fiction tradition. Gernsback's Electro Importing
Company imported specialized electronic equipment from Europe and
helped to supply many of those who wanted to make their own radios and
transmitters. He designed and marketed the Telimco Wireless, the first
home radio set and the first walkie-talkie. He organized the Wireless
Association of America, a major organization in the amateur radio
movement. More importantly, he was an influential promoter of radio as
a participatory medium through his popular science magazines and
through books like "Radio for All" (1922). A technological utopian,
Gernsback believed that radio would foster better communications both
within the United States and globally, enabling stronger social and
cultural communities and a true participatory democracy."

The guy was so far beyond Hiram Percy's "visions" and impact it ain't even a discussion. Maxim invented a silencer (do we have to hear about that AGAIN?) and he did a nice job of promoting the long since irrelevant art & skill of hobby message relaying via his little magazine. Not much if any more than a bit player in the 'teens & '20s.

>
> And what about the efforts of Stewart and Warner?

They were not in it representing the ARRL, they were in it as equals to the ARRL and Hiram Percy, so was the kid from Baltimore.

> What side were all of the above on when quiet hours were imposed?

On the side of Our Boys Over There of course.

> >There was never an international movement to eliminate ham radio.

And some countries do not allow ham ops even today. Some countries being opposed to ham radio does not constitute an international movement to eliminate ham radio.

>
> > Ham news is for hams, nobody else cares.

Blooper on my part here. Cancel previous.

I've lost track of the details of quiet hours thing but it was no big
deal compared with the massive threat of 1919. Quiet hours are still
out there by the way.

> restricted mode forever.

I disagree with that a bit, because people learn at different rates.
Plus FCC will probably not want a license with a different term. But
what could be done is to make the Learner license non-renewable, so
that if at the end of 10 years the newbie is not ready to upgrade,
just take the test again. After all, new drivers are not restricted to
just one learner's permit per lifetime in any state I know.
>
> 2. Correct about beginner's licence restrictions. A beginner doesn't need
> a KW to learn radio.

Yup. Say 100-150 W on HF/MF, maybe 25-50 W on VHF/UHF (more RF
hazard).

> Doesn't need a bunch of bands or modes (like
> satellite) or other fancy stuff. When you're learning to drive, you don't
> need a Ferrari, a Chevy will do fine. Once you show you can do it
> responsibly, enjoy the Ferrari!

But the beginner should have a useful assortment of bands and modes.
One big thing wrong with the present Novice/Tech Plus setup is that it
gives too little HF, in both bands and modes.
>
> 3. Also correct about the tech stuff overlapping the operating stuff.
> Whoever puts the actual tests and restrictions together needs to be a cut
> above the typical lazy bureaucrat.

Well, the tests these days are all createdby the QPC, who are
volunteers. FCC checks and approves, but the grunt work of writing the
things is up to ham volunteers. Which means that last part could be
done under existing rules.

Here's a question I forgot: Should Learners have distinctive calls, or
at least not be able to get any unassigned call?

How about minimum age requirements?

I agree that the registrations are a pain. Why they think they'll get GOOD information I'll neve know. I would NEVER give my REAL info (other than a name and possibly email address) on a site like that either. And maybe not even that. Much less a valid number for income.

It's just a nice article about how the ham volunteers from the Dallas area were involved.

I wonder if anyone in this newsgroup listened to the Nagadoches net during this time? It was re-transmitted over Echolink and I know a lot of people quite a ways off were listening.

Looks like the need for hams in the recovery has ended:

http://www.arrl.org/news/stories/2003/02/14/100/?nc=1

148 hams in one county, 198 in another. 80% from outside the area.

Paper helps, too.

> What's the big deal about
> that?

You ever do it? Bulletin is maybe 150-180 words, no repeats, no asking
for fills. A lot more than "one minute out of five solid copy".

> If ya do it right though ya go "File, Mode", select RTTY on yer
> logger screen and get it over with in seconds and get back to the run.

You ever do it that way?

Fact is W1AW sends the bulletin before the 'test even starts, so if
yer smart you don't have to use operating time at all.

> And for this ya get a 100 bonus points?? Beats me.

Easy 100 for me. At the ~100 W level, it takes 50 phone or 25 CW QSOs
to get those 100 points. Averaging over the entire FD period (not just
the hot times) how long does it take you to work 50 phone or 25 CW
QSOs with a ~100W setup?
>
> > requires a different skill set than running QSOs
> > where the exchange is three pieces of info like "W1ABC 4A EMA"

Points is points. They wanna give me 100 points per mile run on FD,
I'll put on the shoes.

> > Composing and sending a coherent message
> > requires a different skill set as well.
>
> Now I'm really lost. I think you're postulating that twitching the
> paddles for a quick contest exchange requires a different skill set
> from twitching the paddles to send a "coherent message"? NOT.

I've done both many, many times. Have you?

And it's another easy 100 points for maybe 15 minutes on a traffic
net. How long did ya say those 50 phone/ 25 CW QSOs would take ya?
>
> > Ditto the pointless "Message from w1aw" thingey.
>

With what antenna?

> If I choose to do that of course.
> Do you have those choices? Either of 'em??

I don't see any place to write down "choices" in the summary sheets.
"Points" is what they want to see.

How many points ya get for having a lot of choices available?
>

> > June. late August.
>
> That would be kewl, I like it. If ya can't make it June ya still have
> a shot at it.

The August one never really caught on. Plus they used to have the June
one in early June, while kids were still in school. Finally wised up
and went for solstice time.

> > > Lemmee guess which event you'd jump all over . .

ANOTHER SERMON ON THE ANTENNA MOUNT
by Right Reverend Jimmie Callsign,
the Pedantic Parson of the Newsgroup

Of course, AOL allows 7 screen names. Isn't that just a
"bad" thing, though? :-)

>Len is probably the most regular poster here.

What? No POLL? Where is Hans B. and his LIST? :-)

>Do you really expect a serious answer, Dave?

"Dave" the defunct diplomat wants openings for his sharp,
sarcastic little retorts (actually broken chemistry glass-
ware) so that he can play a Prussian Oberst issuing orders.

>I don't think anybody takes Len seriously. I sure don't.

Sure you do. According to the message header, the Parson's
Posting was done close to midnight local downtown Philly
time. Isn't that rather late for workers at an undisclosed
location who do early runs at 5 AM? :-)

All notice how the Pedantic Parson has quit responding
directly. [gosh how we all miss those long, long replies
chiding non-amateurs about minutae and not holding a
Right Attitude...:-)]

>Actually, the use of CW by hams in traffic handling and emergencies
>has been well documented here in the past few years. By first hand
>accounts. The accounts show it to be a once-in-a-great-while sort of
>thing. I for one have repeatedly stated that the idea that all hams
>MUST know code because they MIGHT need it in an emergency is simply
>not reasonable.

Morsemanship is the Prime Directive of amateur knowledge,
the ne plus ultra of radio achievement, used worldwide as
the "common language" for 599 exchanges.

>Just another opinion. Not supported by fact.

There is only Conventional Wisdom (CW) supported by The
Right Attitude, lore, mythos, and tradition.

>The important point is that hams do not use utility, police or fire
>HTs. And amateur radio emergency and public service comms go far
>beyond using an HT.

Just another opinion. Not supported by fact.

Tsk, tsk, tsk. See SHARES. It is documented.

Yes, localized community emergencies and foot race support
need DX-capability fixed stations (all of which miraculously
continue to work after all professional installations fail...).
Of course.

>Was Hurricane Floyd (1999) a "real emergency"? Ask KT4ST. How about
>the ice storms of the winter of 1998?

Yeah, how about those hurricanes of the east and the ice
storms of the north? Real emergencies, right?

How about the Loma Prieta and Northridge earthquakes?
Little local "left coast" piddly things? Of course. The only
sanctified, official emergencies are what Newington defines
on "activating a net" and sounding very public-service-like.

>You missed the point, Dave.
>
>Ham radio is not part of the military. Soldiers don't have to buy
>their own radios. Hams do. End of story.

Tsk, tsk, tsk...someone who has NEVER been IN the military
"knows all about military communications." :-)

Tsk, tsk, tsk...then all the self-aggrandizement of ARRL about
"ham radio goes to war" in WW2 was false? Can't be!

>Seems pretty clear to me that Len lumps all who disagree with him on
>the trivial issue of code testing into a category called "PCTA". To
>him, all "PCTAs" are the identical, and deserving of nothing but his
>contempt and insults.

Awwww...not getting your deserved admiration and respect?

Want to requote endless PCTA comments from this newsgroup
prior to R&O 99-412? Go ahead, make everyone's day. That's
at least a whole year's worth of contempt and pejorative tossing
by PCTAs against NCTAs while elevating morse testing to
some Olympian achievement.

Poor baby. You must have been oh, so hurt by folks who've
had to listen to the Mighty Morsemen for virtual Millenia,
finally getting Fed Up with the PCTA arrogance. Tsk, tsk.

>Note that what constitutes "1930s status quo" is not defined in any
>way.

Having trouble understanding euphamisms and aphorisms?

Try some remedial reading classes. They should be available
in night classes at your local downtown PA undisclosed location.
Some of you BDOFs need remedial arithmetic. :-)

>Sounds a lot more like Len's behavior here ;-)

Oh, oh, an EMOTICON!

>Translation: Len's been around a long time, therefore he can dictate
>policy.

Translation: Little Jimmie can't reply directly, has to attempt
sinking barbs in a roundabout way. No harpoonist he and
there is no Moby Dick...but his Ahab comes all unglued
anyway. :-)

>The important thing is that Len presents his non-amateur experience as
>proof. It isn't.

Oh! "PROOF!" Well, ham radio is DIFFERENT than all other
radio, right? HF communications is DIFFERENT if done by
non-ham equipment versus ham equipment, right?

Oh, wow...NON-ham is nothing, ham is everything! :-)

>The main reason hams do ham radio is because it's fun. Len wants to
>dictate what we should think is fun.

Oh? Can you "prove" that with Google Quotes? :-)

How does advocacy of removal of a morse code test consitute
DICTATING WHAT HAMS SHOULD DO FOR FUN?

You are getting STRANGE, Rev. Jimmie. Very strange.

>The point is that Len repeatedly minimizes and dismisses the help and
>public service performed by hams using ham radio.

Hello? Is your reading comprehension THAT bad, Jimmie?

I've been MINIMIZING the selective editing and propagandizing
of ARRL...NOT the US amateur radio service. Wake up, boy.

>There was a first-hand account posted here about the search efforts
>for Columbia wreckage and the role hams played in supplying
>communication. Factual, clear, and concise.

Yes, and...?

Thousands and thousands of unlicensed-in-amateur-radio folks
were out hunting for wreckage. Over a thousand pieces have
been found so far...and some remains of the seven astronauts
who perished. All of that has been in the newspapers for a week
and a half, "factual, clear, and concise." Newspapers aren't
mentioning amateur radio, though, so regular journalism can't
be as "factual, clear, and concise" as ARRL, huh?

>Most of the pejorative-hurling has been done by Len, though.

Tsk, tsk, tsk. Go live in Google for a while, Jimmie, search
for "Putz" and "Creep" and who posted it as a "signature."
:-)

>We have all heard that story many, many times. What has not been
>explained is how it makes Len an expert on amateur radio, or amateur
>radio policy.

Oooo! Jimmie and Davie need "experts!" Only "experts" can
comment on federal regulations?

Hello? The First Amendment hasn't been waived. HF radio is
still HF radio regardless of the allocated radio service using it.

Does the periodical name "Ham Radio" magazine strike a bell?
(or beep your BFO?) About 50,000 printings every month for
22 years before sale to CQ Communications. Yup, that wasn't
about ham radio at all, was it? :-)

>It also does not prove any of Len's arguments for or
>against anyhting connected with amateur radio policy.

"Anyhting?" :-)

Of course not, in order to discuss getting IN to amateur radio
one has to ALREADY be in amateur radio and do everything
that those already IN did. Everyone understands your words.

>Suppose someone who is older than Len and more experienced than Len
>shows up and says Len is all wrong in his amateur radio policy views -
>simply because that 'someone' has more time-on-the-planet and
>time-in-radio than Len. Does that prove Len is wrong? Of course not.

>Neither does Len's time-on-the-planet and time-in-radio prove any of
>his opponents to be wrong.

...and who is this genius-level methuselah? :-)

HF radio works the same as it did a half century ago. US hams
use HF predominantly, according to these newsgroupie BDOFs.

Tsk, tsk. Ham radio HF use is rather the same as it was 50
years ago except there are far more SSB voice cuesoes now
and some more HF bands. The major difference is that ham
radios are using solid-state devices that came into the market
in the early 1960s. Old-timer Mr. N2EY got solid-stated with
his K2 at the turn of the Millennium. :-)

Poor baby. Must really get your goat to know that someone
actually worked HF comm NOT in ham radio before you were
born, ey? Worked at 1.8 GHz way back then. Lots of ham
bands above 1.8 GHz, Jimmie, you ever operate any up there?
No? We all thought you were a ham guru, old timer. Tsk, tsk,
you're only an "expert" on HF, right?

>Does Len's time-on-the-planet and time-in-radio somehow give him the
>right to hurl pejoratives the way he does, even against those who do
>not reply in kind?

Awwww...too bad, sweetums. :-)

Hmmm...the only "replies in kind" seem to be from the LICENSED
poopie-suit wearer, the ace of the TN CAP...like "Putz" and
"Creep." Or the defunct diplomat who thinks State Dept. comm
is an offshoot of ham radio. Or the guy who works at an
undisclosed location after doing 5 AM morning runs... :-)

>You forgot the most important part:
>
>"His hobby is wasting time. Your time."

Of course, always. The ELITE in ham radio shall always
rule...as they were destined to do... :-)

Everything else is "wasted time." Long-live the BDOFs!
:-)

>Who? Give us some quotes.

Sorry...couldn't get into Google...too many BDOFs in there
trying to rehash five years ago in an endless battle of the
quotes because their widdle feelings got hurt back then...

>Not at all. The license requirements are the same for everyone. A Ph.D
>in EE doesn't get a bye on any of them. Nor does Len.

No kidding, Einstein! :-)

Yes, license requirements are the same for all...and the BDOFs
damn well insist on it REMAINING THAT WAY FOREVER... :-)

>Who says that? Not me - in fact, I posted a whole long list of
>desirable radio operating skills.

Oh? Jimmie has long experience in all of radio now? Or was
that a "long list of desireable AMATEUR radio operating skills?"
Skills according to Rev. Jimmie, of course, memorized from
the psalms of the Church of St. Hiram's writings, of course.

>Give us some quotes.

"Time flies like the wind...fruit flies like bananas." - anon.

>> > Morsemanship
>> > wasn't relevant to the needs of the rest of the radio world of
>> > fifty years ago
>
>Really? Back in 1953 there was no use of morse code in radio outside
>of ham radio?

No, little Jimmie (not yet born in 1953), such skills were NOT
RELEVANT TO THE NEEDS OF THE REST OF THE RADIO
WORLD.

Hello? The REST OF THE RADIO WORLD was busy with
voice and teleprinter communications just beginning to be
the overwhelming majority of message transmission.

>A lot of historical accounts say that's just plain wrong.

Tsk, tsk, tsk. Jimmie's "lot" is confined to ARRL publications.

>Sure, the
>use of Morse code by non-amateur radio services has steadily decreased
>since the end of WW2. But to say it "wasn't relevant to the needs of
>the rest of the radio world of fifty years ago" simply doesn't mathc
>the facts.

Well, little Jimmie WAS THERE, wasn't he? :-)

Duly authorized and experienced in long-distance communications
before satellites, before troposcatter, before fiber optic cable under
the sea. All through the grant of an AMATEUR license much later.

Gosh, someone who can't research the start of TV broadcasting
and TV techniques correctly shouldn't proclaim hisself some
kind of "expert" on the REST OF THE RADIO WORLD.

>Point is, an amateur radio license is or amateur radio, not "the rest
>of the radio world". Test or no test, hams use Morse code. Len thinks
>that's bad.

Hello? Len thinks the morse code TEST is a nonsense
requirement. Len doesn't think much of old, slow morse

code, either, and doesn't care if some BDOFs want to
Defend Morsemanship To The Death. BDOFs have lost
touch with both reality and the future.

>Who said that? Give us the quotes.

Here's a nice one for the times of today -

"He that would make his own liberty secure
must guard even his enemy from oppression.
for if he violates this duty, he establishes a
precedent that will reach to himself."
- Thomas Paine

>Ahh, now we get to what really bothers Len. It's not just the test.
>It's the idea of hams using Morse code at all.

No. It's the BDOFs who insist on status-quoing
everything frozen to the times of their youth so they
can act like superior BDOFs today. :-)

>Notice how Len denies the help provide by hams in things like
>hurricanes, ice storms, and searches for shuttle parts.

Bad Len, evil Len...Len go sit in the corner at Newington.
:-)

>Yet Len insists on calling me a whole string of names he made up. He
>even went to the database to find out my last name. Is that the action
>of a mature individual whom we hams should look to for guidance,
>advice, and policy?

Heavens no, Mr. Serious. Go thee and be The Model Of
Guidance for The Ham. Hold the status quo. Keep the
homefires burning for morse masters. Dictate a morse in
every pot.

>Can't be talking about me, then. Present life and social position are
>pretty good.

Relative to what? :-)

>Perfect example of Len's behavior towards those who dare to disagree
>with him.

Yes, I don't fall on my knees in supplication and awe of the
Olde Morse Masters of Amateurdom. I don't do their bidding.

>"the defunct diplomat" - served his country for ~20 years as a key
>communications officer in the State Department at a variety of
>postings, including Dar-Es-Salaam and Helsinki. Still healthy and
>active despite description as 'defunct'. Long time active ham, (DX,
>contests, VHF/UHF) but not qualified to disagree with Len.

Left out: Thin-skinned arrogance, utter lack of diplomacy
regardless of 20 years of "service to his country," overly
proud, talking down to "lesser" ham licensees in here, tries
to claim unconventional HF procedures are good even
though other radio services never did that and such
procedures aren't logical.

>"the bus driver" - served his country for ~18 years in the Air Force
>at a variety of locations, including Germany. Earned a bachelor's
>degree while working fulltime. Long time active ham, (DX, contests,
>ragchews, digital modes) but not qualified to disagree with Len.

Left out: Fanciful tales of imaginary hypothetical radio
use situations challenging others to debate pre-loaded
hypotheses, utter lack of technical knowledge
demonstration of radio, claimed summa cum laude
in college studying human resource management but
wound up a bus driver.

>"the hoagie muncher" - earned BSME and MSME degrees, has worked in his
>field for ~40 years, including military contracts such as aircraft
>carrier catapults.
>Long time active ham (DX, contests, ragchewing, antenna mechanical
>design), but not qualified to disagree with Len.

Left out: Frequent distortions of the truth such as the
famous "26 patents" which reduced to ONE on a search
of patent records, lack of knowledge of old radio equipment
primary characteristics, insulter of EEs who had done design
in radio and electronics, claimed "intelligence photography"
of USSR aircraft as "equivalents" to actual military service.

>"the dill sergeant" served his country for ? years as an avionics tech
>in the Marine Corps. Earned the requisite degrees and licenses to be
>an emergency room nurse, which became a second career. Long time
>active ham, but not qualified to disagree with Len.

Left out: Does not relate well socially to strangers, has to
use rank-status-title to show his "superiority" to those who
disagree with him, constant use of epithets and swear words
as "signatures," claims military communications experience
yet cannot name any basic comm radio, way too thin-skinned
for rational debate, can only fight older people or those he
perceives as weak. "Temper fry" is his motto.

>"the reverend" - earned BSEE and MSEE degrees, has worked in his field
>for 27 years. Long time active ham,(contests, ragchewing, homebrewing)
>but not qualified to disagree with Len.

Miccolis is out standing in his field at an undisclosed location
with the field unidentified.

Left out: Pertinatious pedantry about old time ham radio, almost
tunnel vision focus on the past, generally ignorant of the rest

of the radio world, accuses others of gross errors and mistakes yet makes them himself on factual information, thinks that only certain opinions are "true" while opinions contrary to his are "false," cannot confront an accuser directly but must work through an intermediary as in this long, long posting.

>"His hobby is wasting time. Your time."

:-) Tsk, tsk, tsk. Jimmie shouldn't make long, long, long posts near midnight.

>
>The militia you're a member of is not the Tennessee Militia?

Brian, for your information -

Heh, it is de facto a state-sanctioned militia except those
"brigades" don't play sojer in da woods. They meet once a
month or so and play sojer, wear uniforms, look very manly
and fierce, while pretending to be some military police
auxilliary.

"Tennessee State Guard" is NOT connected with any federal
military. Strictly a state function. They are NOT, in any way,
related to any National Guard. It's a "let's pretend" sort of
"military." :-)

Their "brigades" sound fancy but the actual size is less than
a conventional US Army battalion (about a thousand, give or
take). They've got ten kinds of rationalizations about their
"importance" in the scheme of things but it really boils down
to the level of some fraternal thing with cammies and insignia.

Our Hostile Action Hero was once "commissioned" as "brigade
communications officer" with a "rank" of "first lieutenant."
(quotes used to take place of italicized words). Problem is,
the "brigade communications officer" didn't know diddly squat
about the kind of communications a REAL Army used, any
national military. Can't name them, something which any
REAL "communications officer" or non-com or signalman
would know as well as anything after 14 years of operational
use...at least 8 years in the National or Air Guard operation.

Tsk, tsk, tsk, he must have resigned his commission...

It's a case of Pretense capitalized, play-acting the "officer" for
admiration of rank and "importance." He is nervous about NVIS,
doesn't know a hop-set from Hop Sing and thought he had a
Bonanza in trying to pull a snow job on folks who DO know.

Same old story in here, fish stories.

> 73 de Jim, N2EY

One newspaper reporter determined that although ham radio operators comprised only about 5% of the manpower involved in the recovery effort, they consumed 95% of the food and constantly complained about the port-potties not being wide enough to accommodate their obese asses. Moreover, hams comprised the geriatric portion of the manpower, the youngest ham involved in the recovery effort was reported to be 67 years old. And as usual, the rocket scientists in Newington will continue to crank out endless news releases which are of interest to no one but hams themselves who want to take all the credit for the recovery effort.

The FCC requires only a minimum number of TOTAL
written questions. Type and kind are determined by the
VEC QPC. Complaints about the type and kind of
questions should be sent directly to the VEC QPC.

>Here's a question I forgot: Should Learners have distinctive calls, or
>at least not be able to get any unassigned call?

Absolutely. Keep them as isolated as possible until
they learn The Amateur Way. Make them stand out
so that they are easy to identify...for whatever reason
the long-timers have... :-)

>How about minimum age requirements?

Absolutely none. ARRL is just itching to have another
"world's youngest ham" news item, hopefully to beat the
four-year-old record. They shouldn't be disappointed.
After all, ARRL is THE representative of all US hams.
:-)

No reference because I defined the term. The term "only-coder" was based on my observations.

>Vipul is certainly NOT an engineer.
Where did this come from? Just decided to add this comment in?

> And I know DOZENS upon DOZENS of NON-CW operators who "collect
>wallpaper", like to contest, and could give a rat's kazoo about ANYTHING
>technical, INCLUDING antennas.
>
> So how does THAT fit into your "only coder" rant, Vippy?

Non-cw operators are not only coders, since they don't code.

However, your statements fits with my claim that most Hams want to contest, collect wallpaper, do CW, and do antennas (which often is highly technical).

I did not say Hams are non-technical. Antennas is highly technical, and I have seen some Hams with impressive skills in this area. Even though some Hams that are skilled with antennas do not have an EE degree, their interest makes them good with antennas.

So, with the exception of antennas, Ham radio is mostly a non-technical,operators hobby. At least among those that meet in clubs. The hooby has many potential aspects. Where most of these are actually participated in form the emphasis of the hobby, and represent "Ham" radio. The March 2003 QST is particularly lacking of technical content.

> And again you are reminded that even the code tests can be "beaten",
>ergo
>you STILL have proven nothing, Vippy. And upon whose "opinion" do you
>declare
>the written tests "very easy (even trivial) to pass"...?!?!

Having a degree, the written tests were especially easy to pass. However, the way the written test is given, most people can pass it in one or two days with one or two tries. You said the tests were easy, earlier in this thread.

You said one could copy a few characters and know the rest, but then one would have to memorize a few characters to do this. I would like to know how one can cheat (or beat) the code portion. Are the pool of sentences also available for the code test?

> "The radio art" is ALSO meant the employment of the radio in any myriad
>of
>applications, Vipul. It is the manner and the skill with which radio is
>utilized to achieve any one of hundreds of goals.

Okay, this definition is possible. I have never seen anyone reference this phrase to any other meaning than technical achievement.

For example, the Q signals could be an example of the radio art since it ensures clear communication when people need to know exactly what those phrases mean.

However, that picture of the club Homebrewing, shown to people outside the club, is wrong. It gives the apperance of wanting to homebrew, when noone in the club actually is interested in that.

If you want to lose weight, eat less:
The soul desires, the body acquires.

And set yourself some type of "mini-goal." That will make it more fun. For example, I have always used a straight key up to this point. My goal is to succeed in using an electronic keyer to make contacts. Then, time permitting, I'll try for the 100 contacts to qualify for a pin.

Hello Jackie ....I am really happy to see that you are learning a skill that will bring you a lot of enjoyment over the years to come. My advice is to answer higher speed CQs during non contest times. This is a win-win situation for you as either the guy sending will slow down knowing you copy speed by xmit speed or he will ignore you. The fellow who slows down has the true ham spirit and looks to the future of the mode. The latter is a jerk and is best left unworked. Again either way you win ...never feel embarrassed or slighted. Please e-mail me if I can help in any way.

>> I am not a member of that organization.
>
>You were a member, but no longer?

Correct.

>You have "real" military experience in the Tennessee State Guard?

No...I had "real" experience in 18 1/2 years in the United States Marine Corps.

>Been to Maxwell. What kind of uniform do they have you wearing?

USAF regulation with distictive devices. Wing patch left sleeve, grey [as opposed to blue] epaulets, and grey name tag with last name and organization. Federal or NG awards or devices may be worn in addition to appropriate CAP devices or awards.

Also, CAP has "CAP Distinctive" uniforms that are not recognizable as USAF or "military". CAP recently authorized the wear of a navy blue field uniform with appropriate CAP insignia. Federal or NG devices may NOT be worn on that uniform.

We once again get to see Lennie the Lame "diss" yet another form of volunteer service.

This one predominantly staffed by the very same Veterans that Lennie claims "others" show disrespect to.

>"Tennessee State Guard" is NOT connected with any federal
> military. Strictly a state function. They are NOT, in any way,
> related to any National Guard. It's a "let's pretend" sort of
> "military."

Pretend only to you, Lennie.

I suggest that you (and anyone who cares to see that you ahve ye again stepped in your own doodoo) refer to the Adjutand General of the State of Tennessee as to the TNSG's role.

Matter of fact, 4th BDE was awarded the National Guard Meritorius Unit Citation for it's role in supporting the NG during the Gulf War.

Jackie,

Well said. I get sick and tired hearing from folks that seem to want us all to think something is wrong if some aspect of life's past-times don't mirror the general population demographics. Like it or not, there just seems to be some hobbies (as well as careers) that attract more of oe gender than another, or more of one ethnic group than others. My only concern as to attracting new people to ham radio is that we try to keep that flow going.

Cheers,
Bill K2UNK

>No reference because I defined the term. The term "only-coder" was based on
>my
>observations.

Ahhh...this is your OPINION.

Now, based upon WHAT observations did you come to this opinion?

>>Vipul is certainly NOT an engineer.

>Where did this come from? Just decided to add this comment in?

It came from an observation that you do not provide any references or
validation of your "data", and that you make obscure "assertions" without any
supporting evidence.

An engineer worth his salt wouldn't be so lame.

>> So how does THAT fit into your "only coder" rant, Vippy?
>
>Non-cw operators are not only coders, since they don't code.

But Vippy! You have labeled ME an "only coder" on several occasions, and I
would be glad to show you my log book that shows I use CW 50% or less of the
time on the air!

>However, your statements fits with my claim that most Hams want to contest,
>collect wallpaper, do CW, and do antennas (which often is highly technical).

You again assert "most" hams and claim my post "fits your claim.

I said : >And I know DOZENS upon DOZENS of NON-CW operators..

"NON-CW", Vippy. NON...as in "prefer not" or "do not" use.

>>who "collect wallpaper", like to contest...

"Dozens" does not support your claim of "most", Vippy. Unless you have
some other access to a valid polling source that proves your assertion?

>>and could give a rat's kazoo about ANYTHING technical, INCLUDING antennas.

Perhaps you are having a problem with the common American English, Vippy.
"Could give a rat's kazoo" means they DON'T care...Have NO interest in beyond

getting RF radiated in some fashion.

>I did not say Hams are non-technical.

Sure you have. You've said it repeatedly. Then you've recanted it, only
to say it again. You're like a traffic light.

> Antennas is highly technical, and I have
>seen some Hams with impressive skills in this area.

Antenna practice CAN be "highly technical", but then on the otehr hand it
can be quite simple. I have zero-point-zero experiecne with Smith Charts and
precious little time with modelling programs, yet I do have some fair
metalworking skills and have built some very effective antennas.
(Ooooops...HOMEBREWING! And ME an "only coder' ! ! Go figure!)

>The
>hooby has many potential aspects.

As I am sure many hoobies do.

>Having a degree, the written tests were especially easy to pass.

A degree in what? Newspeak?

>You said the tests were easy, earlier in this thread.

I said it was pretty easy to pass the tests. This is especially so when
one only studies a "Q&A" manual. It's a might bit tougher if you really try to
study and learn the material.

>You said one could copy a few characters and know the rest, but then one
>would
>have to memorize a few characters to do this. I would like to know how one
>can
>cheat (or beat) the code portion. Are the pool of sentences also available
>for
>the code test?

The code tests are prepared in the same context as the rest of the tests.
The material is not "confidential".

>> "The radio art" is ALSO meant the employment of the radio in any myriad
>>of

It'd be difficult to improve on the accurate quote below:

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

In every state I've lived in, a learner's permit can be renewed indefinitely until a full driver's license is obtained.

However, getting back to the federal government (not state driver's licenses), I'm not aware of any federal license with a learner's permit that expires within a fixed time period without upgrade. What incentive would the FCC have go against that trend in licensing?

Furthermore, how does a learner's permit further the stated goals of ham radio (experimentation, pool of trained operators, and so on)? For example, your learner's permit idea, with it sharp limitations, seems to actually restrain experimentation with other modes, bands, power, technology, home brewing, and so on. As such, it goes directly against one of the stated goals of ham radio.

The existing license structure does not conflict with the stated goals. A Technician, for example, can remain one for life and still fulfill the goals of ham radio.

Given the above facts, why would the FCC even consider your learner's permit idea over the existing licensing structure?

The attractiveness of administrative reductions? Budgetary constraints/reductions? Wouldn't less licenses and less testing make it easier and less expensive (or "taxing" to the public...heh heh) to regulate?

Your statement is simply not true.

> FEMA put in
> its fly-away sat terminals featuring video message boards for
> relatives of the victims. That was on TV news.

That is what FEMA should have done. The presence of elements of
professional emergency management people in no why minimizes the
contribution of amateur radio volunteers.

> Others think that professional public safety communications
> "always goes down in an emergency and hams rush in to
> help save the day." [that's been said, in different words, but
> with the same obvious meaning, for years]

Professional public safety communications *can* stop operating depending
upon the nature of the emergency. Radio amateurs have often assisted
overwhelmed public safety communicators. That is not to say that any
ham with an HT will be a boon to those public safety professionals.
ARES groups which train on a regular basis can be a very valueable asset
to those public safety professionals.

> If that were the case, why are those morse/minutemen allowing
> their local governments to waste so much of their tax dollars on
> professional equipment that "always breaks down in an
> emergency?"

Straw man alert! Professional systems do not always break down. Neither
are emergencies always of a nature which overwhelm professional systems.

You have a superior
"I've-been-a-professional-in-radio-for-half-a-century" attitude and you
talk down to those who don't agree with you. I'm just pointing that
out.

> >Okay, so you won't take the requirements to get the license, you won't get

The record shows differently. Just a few years ago, you told us that
you were going for an Extra "right out of the box". Hasn't happened
yet. What changed your personal goal? No one has denied your
opportunity for talking. You've talked the talk. You just haven't
walked the walk. One would think that, after a declared interest in
amateur radio which has spanned a number of decades, you'd have taken
"the trouble" to take a license exam.

> I took a REAL test (commercial First 'Phone) in an FCC field
> office in Chicago in 1956. I've taken real tests since on other

> domain of night classes.

Why the caps, Len? All of my license exams were administered by FCC
staffers.
They were real tests. I've been part of a VE team which administered
real tests. Was your implication that the only real tests were
administered by the FCC? were only given in 1956? were only available in
Chicago?

> >What makes you think the rules should be changed just because you think
> >you know more than the average person that sits for an AR test?
>
> That isn't, never was "my argument." I'm just arguing against
> the morse code test for an amateur radio license.

No, you are not "just" doing any thing of the kind. You frequently take
shots at the ARRL (to which you do not belong) and at amateur radio (in
which you are not a participant). You attempt to define the exams which
potential radio amateurs would take and you advocate a minimum age for
amateur radio.

> Others,
> nearly all of them self-centered brain-dead old farts (thanks
> again, Jim) keep harping on "personal this" or "personal that."
> To them, the "personal" aspect is all they can argue about.

Your rant smacks of personal envy.

Yup. I've thought about it. White, male radio amateurs must begin to
offer contrition for their unfeeling choices of gender, race and choice
of avocation.
How selfish we've been!

I have noted that, while you are both white and male, I've not seen your
a photo of you in any amateur radio magazine. Did I overlook it?

Is there actually anyone who's still on their learner's permit after years of driving? I would suggest that someone who can not progress beyond that point may have insufficient driving skills and should be put on the bus. Would you like to be on the same road as that guy? Not me. Would you like to be on the same band as someone who can not acquire the skills needed to get a "regular" ham license? Not me.

> However, getting back to the federal government (not state driver's

I'm not aware either. Breaking new ground here.

> What incentive would the FCC have go against that trend in licensing?

The FCC's incentives are often murky. Bureaucratic inertia is often involved in their actions (or lack of actions).

> Furthermore, how does a learner's permit further the stated goals of
> ham radio (experimentation, pool of trained operators, and so on)? For
> example, your learner's permit idea, with it sharp limitations, seems
> to actually restrain experimentation with other modes, bands, power,

> one of the stated goals of ham radio.

Absolutely correct. As with a driver's learner's permit, the purpose is not to allow you to go to the store for groceries, it's to allow you to learn to drive. As soon as you have mastered the basics enough to not be a menace on the road, you may drive across the continent by yourself at night in your Ferrari. Until then it's daytime only, no passengers except the instructor, stay off the freeways and go slow. (I don't know if those are the *actual* regulations, but you get the idea).

> The existing license structure does not conflict with the stated
> goals. A Technician, for example, can remain one for life and still
> fulfill the goals of ham radio.

That's quite correct. I am proposing that it be changed. See the next response.

> Given the above facts, why would the FCC even consider your
> learner's

> permit idea over the existing licensing structure?

Because the existing licensing structure is flawed, IMHO. The difference between an Amateur Radio Operator and an equally talented electronics hobbyist is that the ARO is allowed to transmit RF over the air. Having this authority carries with it the responsibility to do so, well, responsibly. I believe the FCC should focus more on that and less on other things. Yes, some technical knowledge is required, but the emphasis should be on:

1. Proper operating techniques (ID'ing, working split, knowing band limits, etc)

2. Not causing interference (listen before transmitting, avoiding splatter, etc)

3. Safety (RF exposure, high voltage precautions, etc)

4. Neighborhood relations (TVI, etc)

The other, more advanced stuff (driving the Ferrari) can come after the basics have been mastered.

Please don't ask me how this all fits into the current FCC rules; it doesn't. What I'm proposing is a revamping of the rules. I think it's overdue. You may not. It's ok to disagree.

That's easy V just learn the code and you'll "Beat" the test, or if
you feel you have to cheat it just learn the letters and pro signs.
If you pass you'll have cheated the test. If I can do it any one
can do it, if they're willing to just put in a little effort.

>Are the pool of sentences also available for
> the code test?
>

Check out the ARRL web site they have the code practice
sound files on line to be played or downloaded. That's where
I got all of my practice from before I went for the test.
http://www.arrl.org/w1aw/morse.html

BTW it's just names, places, radio types, antenna types,
weather, and power levels. Just like a normal contact
using code would be. But you can't memorize your way
through that test, except for the code characters.

<SNIP>

> buddy? Have him give you one of his tranks. You need it.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

> >You'll still need that morse at the moment
> >if you'd like to have HF access as a radio amateur.
>
> I'm not after a license, colonel.

So, what you told us here just a few years ago was an untruth?

> I'm just here advocating
> elimination of a morse code test...and to watch you
> up-tight anal-retentives get all upset when your thin,
> thin skin gets bruised. :-)

Now you and I know that "just" advocating elimination of the morse code
test isn't all you're here for. That'd be another untruth.

> >Uh, the Commission seems to think you'll still need to pass the exams,
> >Leonard.
> >It isn't just politcal hype.
>
> Oh, my. The "teacher" speaking or the poor ex-diplomat-
> that-never-was and continues-to-be?
>
> 7 x 24 = 168, not 148.

"Euphamism", Mr. Nobless. You're quite "immagure". Why don't you "Go
such an 807 plate cap"?

> >No, you'll just need to do it in order to become a participant. Until
> >then, the only place you can indulge in dumb little games of
> >one-upmanship through frequest mention of your professional credentials
> >is...here.
>
> Poor baby. Still upset are you? The diplomat-that-never-was
> is the one indulging in dumb little games in here.

Let's go over a couple of your recent shenanigans, Leonard old boy:

1. Repeated statement that I originated the use of a CW order wire
despite Google quotes showing that I never claimed such originality.

2. Claim that I never appeared on any Dept. of State "Key Officers"
lists. When urls of Key Officers lists were provided, you declared them
lists of all embassy staff.

Let's ask ourselves about the reason for these statements of yours. Do
they relate to the elimination of morse code in amateur radio testing?
Are they simply an attempt to belittle the accomplishments of another
who disagrees with your position? Are they based in truth? Why would you
make them in the first place?

> >N2EY: "Besides, here's a simple, plain fact:

> :-)

I've asked before but you didn't respond, what is "overly proud"? Why
does it bother you that Jim chooses not to tell you where he is
employed? Why the silly names like "Reverend Jimmie"? Why the comments
about "undisclosed location"? What are we to make of your comment about
certificates and chassis punches? Why would you refer to Jim as a
brain-dead old fart? It looks as if what you have done is simply
provide proof of his statement about your behavior.

The periodicals represent the current demographics of Hams. I don't believe being a minority is a problem in Ham radio. As long as you follow the Ham traditions, its not an issue. If you disagree, you may be called a CBer, not your minority. At the many Hamfests and club meetings I've been to, I have found Hams want to increase their membership and do not care about which gender or race you belong to.

Hi Group...

Plenty of FAST CW signals coming down on 20 meters. Guess a lot of people have keyboard-type or autokeyers out there... so far all the signals are too fast for me to hear. However, I'm going to keep listening and see if I can occasionally pick something legible (to me) out of the pileups. I heard my first instance of aurorae when I was listening to a Swedish op (my friend was here at the time, he can understand fast Morse and told me the op was in Sweden) and the hollow, eerie quality of the signal was most interesting to listen to.

I learn something everytime I turn the dial... have fun in the contest if you are working it.

Jackie

I did manage to catch a few "CQs" here and there... I'll keep my ear to the
receiver. Practice in listening will no doubt help.

Jackie

Amateur Radio Newsline™ Report 1331 - February 14, 2003

Amateur Radio Newsline report number 1331 with a release date of Friday, February 14 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The terrorism warning level goes up in the United States and ham radio operators should be prepared. The details on Amateur Radio Newsline report number 1331 coming your way right now.

(Billboard Cart Here)

**

THE WAR ON TERROR: NATION GOES COLOR ORANGE: HAMS SHOULD BE ALERT

Homeland Security Secretary Tom Ridge says every American must be vigilant. This as the Bush administration raises the nations terror alert from Code Yellow to Code Orange and says this represents the most significant warning since the Sept. 11, 2001 attacks. Among those best equipped to assist the nation in fighting terror are its ham radio operators. Amateur Radio Newsline's David Black, KB4KCH takes a look at how hams can prepare themselves and how they can help:

--
The government isn't minimizing the threat. Officials expects more attacks against the United States and its allies in coming days. The only thing they can't do is predict when and where an attack will occur.

Federal officials recommended that Americans should take basic disaster preparation steps. This includes maintaining a three day stockpile of food and water. They also recommended obtaining duct tape and plastic sheeting to seal a house in the event of a chemical or biological attack or disaster. They also say to have some sort of emergency radio receiver. One that can operate for days without being plugged into a power outlet is best. This will be the primary way the government talks to you should the unthinkable happen.

How can ham radio operators help? Start by making sure that your ham gear works. Especially your hand held and mobile radios. If you only have one battery pack for your H-T, go out and buy one or two more. Or even better, get a case that lets you use alkaline batteries that are widely available. If the power goes out, you can't recharge Ni-Cads or NiM-H cells. But you can operate for a number of hours with Alkaline batteries. So have several sets of these on hand -- at least enough to get you through 72 hours of non-stop operation.

If you are a trained communicator active with an ARES or other emergency communications group, be sure to let the chain of command know where you will be. Give them a list of phone numbers where you can be reached 24 hours a day -- 7 days a week. Better yet, get a pager and give its number only to the person who will be calling you. That way if that pager goes
off, you know it's for real.

What about looking out for terrorism in your own community? Do it. Observe and report.

If you see something that looks out of the ordinary or suspicious, call the police. Remember that old adage about better to be safe than sorry. While it's not likely you'll encounter a real live terrorist cell, it's not out of the question, either. And that's where your radio, your local repeater and its autopatch come in.

Even if you don't own a cellular telephone, your hand held or mobile radio is your emergency lifeline. If you have access to an autopatch equipped repeater its a lot better than a cell phone. Cellular phones are known for not being reliable in many areas. With a ham repeater, if you can hear it, the chances are it will hear you. And even if there's no autopatch, another amateur can relay your message to authorities.

What about on the air? What are the chances that a terrorist cell might take to the airwaves on your favorite band? Not very likely but again not impossible, either. Terrorists tend to try to blend in with the background. Setting up a communications network on even an underutilized band like 6 meters would be like waiving a red flag in front of a bull. Hams are very protective of their spectrum and are not afraid to go after those on a band illegally.

It's far more likely that a terror group would set up shop on license free public frequencies than on 2 meter F-M or 20 meter sideband. And it's a pretty good guess that government monitors are keeping a close ear on F-R-S, MURS, Class D CB and the frequencies nearby to each service.

What if you hear something that seems suspicious? There are three letters to remember: F-B-I. The agency set up a website and dial-in tip line immediately following the September 11th attacks. Both are still in service.

The website U-R-L is www1.ifccfbi.gov and it puts you only a link away from filing a report. Just click on the words "Report Terrorist Activity."

And this word to hams who have never handled emergency communications. If you hear a net going on, don't break in to ask if you can help. The chances are that you cannot. You can do more good by listening and learning procedures. Better yet, go to the ARRL's website and sign up for one of their Emergency Communications Training Classes. With the stark new reality of terrorism on our homeland soil, it should be incumbent on every ham regardless of age or license class to become

skilled in emergency communications techniques. It might be you who's called on to save a life.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, in Birmingham, Alabama.

--

The bottom line. As the Office of Homeland Security has said, every American must be vigilant. In retrospect, all of our lives could depend on it. Hams can sign up for emergency communications training at the ARRL website -- www.arrl.org. (ARNewsline™)

**

ENFORCEMENT: HAM FINED $12000 FOR MULTIPLE VIOLATIONS

A ham has been fined $12,000 for violation of the Amateur Service Rules. We have this report:.

--

Its one of the largest fines ever assessed for ham radio rules violations and its been handed to Scott E. Kamm, the license holder of amateur radio station N0UGN. And it comes after the Federal Communications Commission finds Kamm apparently responsible for causing intentional interference, broadcasting music and failing to identify with his station by its FCC assigned call.

Kamm's story goes back to December 9, 2002. In response to complaints of continuing interference on 146 point 31 MHz, an agent of the Commission's Kansas City Field Office began monitoring. At approximately 7:00 P.M., the agent observed a very strong signal on the frequency. It was reportedly made up of music, sound effects and unmodulated carriers. No station identification was transmitted. More important. These transmissions were interfering with existing communications that were in progress between other amateur stations.

Using radio direction finding the agent determined the source of these interfering signal to be Kamm's residence in near-by Waterbury, Nebraska. The FCC says that Kamm has two addresses that they know of. One in Sioux City, Iowa and the other in Waterbury where they traced the interference as coming from.

The scenario repeated itself a day later on December 10th. This time the agent entered the premises and inspected Kamm's station. The agent found an amateur radio transmitter capable of operating on 146.31 MHz but Kamm stated that no transmissions were made from his station. That he used the radio to receive only. Kamm also asserted that no one else operated the station.

But the FCC is not buying that story. It says that the Amateur Service Rules state that no ham shall willfully or maliciously interfere with -- or cause interference to -- any other radio communication or signal.

Also amateur stations are prohibited from transmitting music using and that they must identify at the end of each communication or at least every 10 minutes.

And, based on the evidence before it, the FCC says that it finds that Scott E. Kamm did willfully and repeatedly violate the Amateur Service Rules by causing intentional interference, broadcasting music and failing to identify. He is being fined $7000 for the interference, $4000 for transmitting the music and $1000 for failing to identify.

In Blair Alper, KA9SEQ, reporting for the Amateur Radio Newsline.

--

Kamm was given the customary thirty days to pay up or file an appeal. (FCC)

**

Break 1

With studios in Los Angeles California, the United States of America, and with reporters around the globe, we are the Amateur Radio Newsline, heard on bulletin stations worldwide, including the Ole Virginia Hams Amateur Radio Club net serving Manassas Va.

(5 sec pause here)

**

ENFORCEMENT: UNLICENSED RADIO BROADCASTER SENTENCED TO 18 MONTHS PROBATION

The FCC has announced that Benjamin Leroy Carter has been sentenced to 18 months probation. This, following his conviction on seven counts of unlicensed radio operation.

The conviction and subsequent sentencing is the result of an investigation that began in February of 1999. The Commission's Tampa Florida Office says that it received complaints from residents and broadcasters in the Orlando, Florida area of interference to the reception of licensed radio broadcast stations. Carter, who also went by the name of Malik Copafeel Abdul, pled guilty to seven counts of unlicensed radio operation in November of 2002. He also agreed to forfeit all equipment used in connection with the station.

The FCC says that 4 months of the sentence will be served as home confinement. In addition, Carter will be required to perform 50 hours of community service. Its all in cyberspace at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-231068A1.doc (FCC, CGC Communicator)

**

RESCUE RADIO: NEW CLASS OF FIELD DAY STATION

Amateur Radio's premiere emergency preparedness operating event is changing. This with word that the annual ARRL Field Day will gain another entry class for 2003.

Called Class F, these will be Amateur Radio stations which are set up and operate from emergency operations centers, or EOC's. ARRL says that the change renews the emphasis of Field Day's 1933 origins as an emergency preparedness exercise as opposed to a routine contest. (ARRL)

**

RESCUE RADIO: A NEW CB SIDEBAND EMERGENCY CHANNEL

Doug Schwinn N0LAY, reports over the QRZ.com website that the Michiana Emergency Monitoring Group is promoting an iniative to have C-B channel 39 designated as an additional frequency to be used and monitored during emergencies. This in addition to the existing C-B channel 9.

The reason? Schwinn, who also holds the call KDZ0430 says that he joined in the effort because of the mountainous region of Colorado where he lives. He says that he would likely be heard using lower sideband on C-B Channel 39 than A-M on Channel 9 during an emergency situation. He also notes that a spokesperson for the group stated in an article in Popular Communications that this is part of an effort to restore and legitimize the Citizen Band Service. (N0LAY via Internet)

**

RESCUE RADIO: HAM RADIO ASSISTANCE IN COLUMBIA DEBRIS RECOVERY ENDS

Ham radio communications assistance in finding parts from the fallen space shuttle Columbia has wound down. According to several Internet reports, February 12th was the last day hams were to be called out to provide communications in the recovery effort.

During the height of the recovery, activities being conducted over the W5NAC repeater in Nacogdoches Texas could be monitored using Echolink's EDU_NET conference. Rick Hambly, W2GPS, says that there was a very active effort by RACES and SKYWARN to aid NASA and government agencies like the FBI with the identification, G-P-S location, cataloging and recovery of space shuttle Columbia components.

As previously reported, the Columbia was at 203,000 feet when it disintegrated plummeted back to Earth. All seven Astronauts on board were killed. Three of the 7 were licensed radio amateurs but no ham radio gear was carried on that ill-fated flight. (VHF Reflector, W2GPS, others)

**

REMEMBERING COLUMBIA: HAM CREATES ON-LINE MEMORIAL

A former Amateur Radio Newsline Young Ham of the Year ward recipient has created a lasting Internet tribute to the space shuttle Columbia.

The memorial website was created by Kevin Boudreaux, N5XMH, of Orlando Florida. Boudreaux, who grew up just outside New Orleans was the recipient of our 1993 "Young Ham of the Year Award" for his organizing Amateur Radio emergency communications following a devastating hurricane.

Today Boudreaux is a Manager with the Hilton Hotels and a professional website designer. He tells Amateur Radio Newsline that he was so personally touched by the Columbia tragedy that he created this memorial website to the shuttle and its crew.

The webpages he has created are filled with facts about the orbiter and its mission along with photos and short biographies of its STS-107 crew. Kevin also provides links to other Columbia memorial websites along with the complete statement of President George W. Bush when he sadly went on the air to let the world know that the Columbia was lost.

Kevin was only 14 when he went out to help his community in time of disaster. He was 15 when he received the "Young Ham of the Year Award" and his dedication has never stopped.

You can view his web tribute to the fallen Columbia and its crew at www.sscolumbiamemorial.com or www.columbia7memorial.com (ARNewsline™)

**

RADIO LAW: ALLEGED PAY TV INFO THIEF PLEADS NOT GUILTY

A 19-year-old University of Chicago student has pleaded not guuilty to federal charges of stealing plans for security systems used by satellite broadcaster Direc TV and distributing them freely on the Internet. Igor Serebryany is accused of stealing information related to Direc TV's latest access cards and then posting the priporotity information to websites dedicated to the hacking of the companys security systems

As previously reported, the theft allegedly took place while Serebryany was working at the Los Angeles office of a law firm that represents Direc TV. He was indicted by a federal grand jury last month on three felony counts of theft of trade secrets and faces a maximum sentence of 10 years in prison if convicted on all charges. (Published news reports)

**

CONVENTIONS AND HAMNFESTS: CHARLOTTE NC IN MARCH

March 8th and 9th are the dates of this years Charlotte North Carolina Hamfest and Computer Fair. The venue is the Charlotte Merchandise Mart on Independence Blvd. Doors open 8:30 a.m. both days with talk in on the 145.29 Mhz repeater. This years featured forum speaker is FCC chief rules enforcer Riley Hollingsworth, K4ZDH. More information is in cyberspace at www.w4bfb.org/Hamfest.html (Press release)

**
RESCUE RADIO: HAM RADIO IN TV DOCUMENTARY

Ham radio is part of a soon to be shown documentary produced for the Discovery Channel. Joe Moell, K0OV, has the details:

--
Members of the Hospital Disaster Support Communications System of Orange County, California have been included in tapeings for a new documentary series on the Discovery Channel. "Critical Rescue," a series of programs featuring rescue workers and those who support them, made its debut on February 6.

A team from New Dominion Pictures spent a half-day with HDSCS last August. They interviewed founder and leader April Moell, WA6OPS, and taped reenactments of ham communications that took place on April 23, 2002. On that day, hams were awaiting their assignments for one of the four large-scale disaster drills in Orange County each year. At 8:10 AM, a 6000-ton mile-long freight train struck a standing Metrolink double-decker commuter train at a crossing in Placentia, causing three deaths and over 200 injuries. The drill was immediately cancelled, and as rescuers converged on the train crash scene, area hospitals braced for the wounded passengers.

As Net Control, WA6OPS quickly deployed hams to the 14 hospitals most likely to receive victims. There they handled countless messages, verifying victim dispatch and patient counts, providing information for inquiring victim families, and communicating with hams supporting the Red Cross. Within some hospitals, HDSCS provided direct links to handle messages between triage areas, Emergency Departments, and Command Posts.

Additional HDSCS operators participating in the reenactments were Sam Creason K6EW, Cheryl Simpson KD6MWZ, Ralph Swanson WB6JBI, and David Mofford W7KTS. It is not known how much of the HDSCS footage will appear in the edited program.

From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

Again, "Fateful Journey" will air 8 and 11 PM Eastern and Pacific times on Thursday February 20th, and again at 2 PM Eastern and Pacific on Saturday February 22nd. (ARNewsline™, K0OV)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

ARRL PACIFIC DIVISION DIRECTOR JIM MAXWELL, W6CF, SK

ARRL Pacific Division Director Jim Maxwell, W6CF, has died. The 69 year old Maxewll passed away on Thursday February 6th at his home in Redwood Estates, California. The cause of his death has not been announced.

Maxwell, who became a Director in January 2000, joined the ARRL Board in 1994 after being elected Pacific Division Vice Director. He also served as an ARRL Emergency Coordinator from October 1991 to March 1999.

An avid DXer, Jim Maxwell belonged to mumerous DX clubs, contest clubs and organizations. This included the famed Northern California Contest Club. He also served as a member of the ARRL DX Advisory Committee from April 1988 through 1994 and was an accredited Volunteer Examiner.

Professionally, Maxwell held doctoral degrees in aeronautical engineering and biomechanics. He retired from the Lockheed Missiles and Space Corporation as a technical consultant in 1992 and from Scitor Corporation in 1998.

Pacific Division Vice Director Bob Vallio, W6RGG, takes over immediately as Director. ARRL President Jim Haynie, W5JBP, will appoint a new Vice Director in the coming days. Maxwell previously held the call W6CUF. (ARRL)

**

HAM RADIO IN SPACE: ISS PACKET RETURN DELAYED FURTHER

When will the packet system on the International space station come back on? Nobody is quite sure but ARISS International Chairman Frank Bauer, KA3HDO says that his group has been working with its colleagues in NASA and Russia's Energia to get it operational again. Unfortunately, so far they have only been successful in getting it turned on for about one orbit.

Bauer says that several factors are impeding the packet startup. First, the progress vehicle docked with ISS and the crew is currently unpacking and stowing about a ton of supplies and equipment. Also, the crew is working with their mission control counterparts on schedule changes that have occurred due to the Columbia accident.

Given these items its apparent that this crew is not as engaged in ham radio the way the last ISS Expedition crew was. And because of this the packet system may be off for a bit longer. (ANS)

**

CONTESTING: ARRL SAYS BEACONET IS OK

ARRL Contest Branch Manager Dan Henderson, N1ND, says that BEACONet does not violate any contesting rules. According to Henderson, after additional review the ARRL has come to believe that BEACONet is similar to an automated CQ'ing system. That it only facilitates the

solicitation of contacts and as such it seems to comply with the letter and spirit of the contest rules. (VHF Reflector)

**

DX

In DX we take to the sky this week. This with word that Wayne Estes, W9AE, plans to operate the Amsat Oscar 40 satellite as FG slash W9AE from the island of Guadeloupe. The tentative plan is for Wayne to start operation at 2300 U-T-C on February 21, 22, 25, and 26 for windows to the Americas and the Pacific. Also listen for him on Sunday February 23 from 1500 to 2000 UTC for a satellite window to Europe and central Asia. Exact operating times will depend on the RUDAK schedule and Wayne's vacation activities. If you work him, QSL to Wayne Estes, 18673 W. Meadow Lane, Mundelein IL 60060, U.S.A. (ANS)

And Hagal International reports that Israeli amateur operator Dov Gavish, 4Z4DX is the first ham in the world to completely confirm DXCC using electronic QSL's. Although still not recognised by the DXCC, electronic QSL'ing is gaining ground in the DX community. (Hagal International)

Also, the ARRL's new Logbook of the World secure electronic contact-confirmation system took a major leap toward public release in January. This, with several weeks of limited tesrting of the concept. (ARRL)

**

THAT FINAL ITEM: TURN AROUND IS FAIR PLAY

And finally this week, we have all heard the expression "turn around is fair play. And one person who has just found that out is former computer hacker turned on-line security expert Kevin Mitnick, N6NHG. That's because Mitnick's new company website has been -- well -- hacked. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the rest of the story:

--

The ham who holds the honor of being the world's best-known computer hacker suffered the indignity of having hackers break into his new security consulting company's Web site -- twice. But news reports say that Kevin Mitnick, N6NHG, simply shrugged off the incidents as amusing and not serious enough for him to call authorities to investigate.

As I said, two electronic break-in's have taken place. The first was on January 30th. In that one a hacker calling himself "BugBear" added a page to Mitnick's corporate website that read "Welcome back to freedom, Mr. Kevin." This is probably a reference to Mitnick's probation which ended ten days earlier on January 20th. During his probation Mitnick was barred from accessing the Internet and this hack may have been more of a welcome home -- in this case -- home being the World Wide Web.

The latest incident took place over the weekend of February 8th and 9th and was more of an on-line job application than a hack. In this case a hacker in Texas broke in and asked Mitnick to hire him as the company's security officer.

Mitnick says that the hackers apparently exploited separate flaws in Microsoft's Internet server software. He says that the person responsible for the company's Web site failed to install patches available from Microsoft.

In neither instance did hackers vandalize the Website. One said in e-mail that he didn't do damage out of respect for Mitnick.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Mitnick's new organization is called Defensive Thinking and is located in Los Angeles. A company spokesman said that no customer information was released nor was there any danger of information being compromised. (Published news stories)

There are certainly some keyboards and whatnots on...but you will find that most of the signals are usings electronic keyers.

Most of the big guns run from their computer keyboard. BUT.....this works on Transmit only. CW is still done by ear for receive.

And thats the tuff part. Keep at it.

Dan/W4NTI

...in other words, Sgt Putz won't accept anything that disagrees
with his testosterone pill induced mood. :-)

> An engineer worth his salt wouldn't be so lame.

Ah, macho morseman, engineers are paid in money these
days. Salt may have been paid to Roman Legionaires in
the old days, but that was "the old days." Before radio and
testosterone pills.

Another certificate-waving amateur extra in here refuses to
identify his employer. Imagine that, spending one-third of
24 hours and not having pride in work or employer! :-)

>>> So how does THAT fit into your "only coder" rant, Vippy?
>>

>time on the air!

Oh, wow! "P-51 time" as an expression must have gone out of
style in the TN CAP. ["P-51 time" refers to writing in more
flight hours in a personal log than actual flight hours...as done
with a Parker 51 pen]

>>However, your statements fits with my claim that most Hams want to contest,
>>collect wallpaper, do CW, and do antennas (which often is highly technical).
>
> You again assert "most" hams and claim my post "fits your claim.

Doesn't the Immortal Amateur represent all the US ARS?!?

> I said : >And I know DOZENS upon DOZENS of NON-CW operators..

No doubt all 670-plus thousand. They all assemble on his TN
street every morning and he calls the roll...in proper uniform
with "distinctive unit insigna," of course...

> "NON-CW", Vippy. NON...as in "prefer not" or "do not" use.

Is that on the Orders For Today posted on the bulletin board
in front of your house headquarters?

>>>who "collect wallpaper", like to contest...
>
> "Dozens" does not support your claim of "most", Vippy. Unless you have
>some other access to a valid polling source that proves your assertion?

:-) [tsk, tsk, tsk, Sgt Putz should have told him to Get Down
and Give Him Twenty like a good Dill sergeant...]

>>>and could give a rat's kazoo about ANYTHING technical, INCLUDING antennas.
>
> Perhaps you are having a problem with the common American English,
>Vippy.
>"Could give a rat's kazoo" means they DON'T care...Have NO interest in beyond
>getting RF radiated in some fashion.

Is the Immortal Amateur giving away free kazoos to rats? :-)

Incomprehensible correction from the amateur language
"doctor" who frequently typos in rage in here... :-)

>>I did not say Hams are non-technical.
>
> Sure you have. You've said it repeatedly. Then you've recanted it,
>only to say it again. You're like a traffic light.

? Are there traffic lights in Tennessee? I thought they only
had Chatanooga choo-choos...

>> Antennas is highly technical, and I have
>>seen some Hams with impressive skills in this area.

>
> Antenna practice CAN be "highly technical", but then on the otehr hand it
>can be quite simple. I have zero-point-zero experiecne with Smith Charts and
>precious little time with modelling programs, yet I do have some fair
>metalworking skills and have built some very effective antennas.
>(Ooooops...HOMEBREWING! And ME an "only coder' ! ! Go figure!)

Tsk, tsk, tsk. "...otehr..." "...experiecne..."

Note: Beer fermenting is not RADIO homebrewing, your
macho morse immortalness.

>>The
>>hooby has many potential aspects.
>
> As I am sure many hoobies do.

Of course, the mighty morseman has much "experiecne" in
his hoobies.

>>Having a degree, the written tests were especially easy to pass.
>
> A degree in what? Newspeak?

:-) Here we go on certification, folks... :-)

Another small rollercoaster of sheepskin slapping from the
mighty macho morseman who is NOT a real doctor, NOT a
regular military commissioned or warrant officer, NOT even
a purchasing agent any more...

>>You said the tests were easy, earlier in this thread.
>
> I said it was pretty easy to pass the tests. This is especially so when
>one only studies a "Q&A" manual. It's a might bit tougher if you really try
>to study and learn the material.

:-) Wow, those testosterone supplements affect the Putzman's
brain, too. Well, logically, that shouldn't be too difficult
considering the few neurons...

> The code tests are prepared in the same context as the rest of the
>tests. The material is not "confidential".

No?!? I AM disappointed. Gosh, all along I thought this
virtual radio post-doctorate examination was oh, so secret
and mysterious (even metaphysical) and one had to be
"cleared" by the ARS community for the "right attitude!"

>>Okay, this definition is possible. I have never seen anyone reference this
>>phrase to any other meaning than technical achievement.
>
> That's because the sphere of your experience is very minimal.

Oh! V. Shah's "experience is very minimal!" This coming from the "immortal one" who is an EX purchasing agent who changed avionics boxes once in the corpse...and can't name a single radio used there or the Fighting 4th as "communications officer!"

I forgot "seven hostile action heroism" episodes... :-)

Temper fry

>stepped in your own doodoo) refer to the Adjutand General of the State of
>Tennessee as to the TNSG's role.

Oh, wow, color us all "officially impressed!!!" :-)

"Adjutand?" "...ahve ye...?"

"Official!" [sounds rather the same as 'offal,' donut? :-)]

> Matter of fact, 4th BDE was awarded the National Guard Meritorius Unit
>Citation for it's role in supporting the NG during the Gulf War.

WOW! "National Guard 'Meritorius' Unit Citation!!!"

During the Gulf War!!! Hmmm...Sgt Putz was "commissioned"
in the Fighting 4th BDE (soldierly abreviation for 'brigade') during
the Gulf War? One of those Seven Hostile Action heroism
events was the Gulf War.

Gosh, we are all so impressed! The Far East Command Signal Service Battalion (larger than a TN "brigade" in size), 8235th Army Unit, only got two Presidential Unit Citations - while I was assigned to it - and we wore that distinctive insignia (with a "2" in the laurel wreath). Wasn't near the heroic hostile action stuff taking place in TN during the Gulf War! I guess all us Army veterans should all hang our heads in shame for doing rear-area "radio clerking," huh? Yup, yup, nothing like the Glory and Honor of a non-federally-affiliated Official TN state guard!

Well, all of that is Officially Important HAM RADIO info, ain't it? State Guard units are all about radio, ain't they? Real Army radio communications units serving an area head-quarters with the only long-distance method at the time (HF) are just "rear area clerking." Yup, yup, we were all slackers, clerks, cowards, good-for-nothings, not even worthy of contempt, your mighty macho morseman sir?

>>Their "brigades" sound fancy but the actual size is less than
>> a conventional US Army battalion (about a thousand, give or
>> take). They've got ten kinds of rationalizations about their
>> "importance" in the scheme of things but it really boils down
>> to the level of some fraternal thing with cammies and insignia.
>
> Again, more Bravo Sierra tap-dancing by the Cowardly One.

Forgive me, mighty macho morseman, for having the temerity to state facts of the Real Army. It is obvious that the Real US Army cannot match the glory and honor of a state guard not part of the National Guard. The Confederacy has risen once again...

<all sing "Dixie" at this point...>

>>Same old story in here, fish stories.
>
> Any fish story I could make up would never beat the blatant lies you
>spew, Lennie.

Carefull, carefull, Sgt Putz, you'll pop the "distinctive unit insignia" off your poopie-suit.

>>Our Hostile Action Hero was once "commissioned" as "brigade
>> communications officer" with a "rank" of "first lieutenant."
>
> Yep. Still got the Warrant of Appointment.

"Warrant?!?" Tsk, tsk, tsk, not a "commission" as once stated?

Oh, my, mighty macho morseman is now a Warran Officer!

ooops...not present tense, past tense. he no longer "member" of state guard. lose his club card, but not his "warrant?"

> Still nothing to offer, eh Lennie? Just more arrogance and loathing of
>those who chose to "do something", rather than sit around wallowing in
>"retirement"...?!?!

"Wallowing in retirement?!?" Oh, my, now retirement is a sin!

:-) :-) :-) :-)

Just having too much fun poking at puffy little neanderthal
mighty macho morsemen who think the hobby of amateur
radio is "for the Corps, God, and Country" (in that order).

Hint: US amateur radio isn't the USMC, despite your daily
overdose of testosterone supplements. Really.

> You're a loser, lennie. You're empty, you're ugly, and dying a lonely,
>painful death.

Awwww. The ARS' answer to Efren Saldivar seems preoccupied
with death, desiring death to all who don't obey his "official"
commands. Not really a good attitude for a professional health
care provider.

Oddly, there seems to be some dispute with this Dr. Kildare
wanna-be (or is it a George Clooney wanna-be?). My real MD
(young fella, lots of certificates and practice, works in one
place rather than moving around a lot) disagrees with the
Steamy...but he isn't on testosterone supplements... :-)

> Better you than me.

Steamy will never die. He is immortal for he is an Extra
Amateur with lots of uniforms, medals, ranks, and
distinctive unit insignias! :-)

All stand at attention and salute the Amateur Immortal!

Temper fry

Wow! More important RADIO info, right?

Flight suits, one-piece coveralls, commonly called "poopie-suits"
by those who wear them. [I've worn one a few times as a
civilian] But, it's a UNIFORM! Important! "Distinctive Unit
Insignia," too! Hot damn!

Ham Radio info! Ham Radio Policy! :-)

I used to be an optimist. :-)

I remember KH2D setting the style of the mighty macho morsemen
in here five years ago. Jim is not doing so well now, moved from
Guam to Florida(?) or someplace. Does the colonel wish to
take his place?

>How about the one where you'll go for the "Extra right out
>of the box"?

Yeah, how about that? :-)

>Want to go over your well known "Key Officers" list rant?

Nah. It would highlight your mighty and important "service to the nation" or something, swell your ego (or 'swill it,' hard to tell). You are free to copy certain mastheads from HR magazine...those were in service to Communications Technology Incorporated...same as those "key lists" of yours. That was for Ham Radio magazine on ham radio topics. Did state department key officer lists have anything to do with ham radio?

Hey, I've got an idea! Why don't we all go into a discussion of the technical importance of using CW as an order-wire for an RTTY circuit! You can explain how CW is so beneficial, logical, and etc. and why other HF communications doesn't do that marvelous innovation! Yeah! Real RADIO talk! :-)

Watch the gangplank when boarding that Horst Wessel...

What "fire," obsessed one? Your Bic quit flicking long ago.

>>How was that purchasing agent job in that "big" cable TV company?
>
> Enjoyed it while I was there. Anyone should have the benefit of leaving
a
>healthcare profession for some period if they so desire...especially after the
>death of a loved one.

Of course. YOU are the only such victim, right? Nobody else
has had it as bad as you. Nobody else has "loved ones," do
they? Of course not.

So, when did you get fired from that company?

> Please notice I AM back in the SAME job as before...As a nurse.

Who cares? Nursing isn't about HAM RADIO POLICY, is it?

You aren't as good as a Real MD?!?!? How can that be?

Pre-med entrance too tough for you? Take some more
testosterone supplements and work up the courage...

>>Get to do any real engineering design?
>
> Nope.

NO?!?! Gosh, you said once you knew all about radio design
because you were buddy-buddy with those real engineers in
there!

>>Get any patents awarded for that?
>
> They issue patents for not doing anything? BUT OF COURSE! You have

>one, don't you...?!?!?

Yes, I do, and the number and discussion was done on it in
here some time ago. It is a RADIO circuit, something that
your Immortalness might understand in a couple centuries.

You can access the US government site for patents and get
a description with enough particulars...if you know how to
operate a computer-modem. Do it quick because it will
probably expire around 2008 (if GE had it renewed it in 1991,
unknown). When it expires you can hop up and down, laff,
point fingers and should DEFUNCT! DEFUNCT! That will
make you happy, you poor soul, because you like, I mean
REALLY like to talk down to others.

>>Did you write articles in radio and electronics magazines?
>
> Nope. I hear you did, but that magazine went belly-up.

Communications Technology, Inc., was the parent of two
amateur radio periodicals and that corporation along with
all properties were sold to CQ Communications in 1990.

You can still view all 22 years of HAM RADIO magazine
on three CDs for sale by CQ for $150. ARRL resells the
same thing. You will no doubt view a pirate copy.

>>Been a design engineer longer than the Loose
>> Cannon was licensed as an amateur.
>
> Speaking of which, let's consider what happened to "American
>Engineering" while His Putziness was "on watch" as an "engineer":

That's not an AMATEUR RADIO POLICY issue but let's grab
this "knowledgeable astronaut-wannabe" statements and go
with them -

> The Soviets beat us into space with an unmanned probe.

Yes, Sputnik. 1957. Little infant Steamy was just beginning
to articulate sounds.

> The Soviets beat us into orbit with a manned craft.

Yes, in 1961 by a month. Little Steamy was going through
toilet training.

> The Soviets beat us into space with a manned space station.

Yes, MIR. MIR fell to earth in blazing pieces. The International
Space Station is still up. Little Steamy still hasn't finished his
toilet training...

> The Japanese put practical consumer electronics into every American home,
>causing the collapse of countless American firms.

Yes, Hallicrafters, National, Hammarlund, Collins all quit making
amateur radio equipment. Little Steamy tries to talk like some
kind of Alan Greenspan but winds up articulating only adjectives.

> The Red Chinese managed to not only get "the bomb" while Lennie was an
>engineer, but developed technology to deliver it to the United States, all the
>while stealing it from American "engineers" who were more intent on their
>401K's and retirement homes in Southern California.

Now Little Steamy is fantasizing he is Erich von Daniken while
In Search of Ancient Insults. :-)

Little Steamy has lost his Script! He is supposed to say niceties
like "stupid bench-tech" instead of "engineer." Poor baby...

> Nice job, Lennie. Hope you're comfortable.

Yes, quite so. Comfortable income. Comfortable house (we have
two). Honorable discharge from the US Army (no conditions).
Amusing characters in a newsgroup, a bunch of brain-dead old
farts pretending to be mighty macho morsemen. Easy target
shooting for recreation.

> Obviously you are eithr lying now, or you were lying when you made the
>assertion to get "an extra lite".
>
> Which was it?

I never wrote anything about "getting an extra lite."

> Now, WHAT was it you had to offer US that is pertinent to Amateur Radio,
>Lennie? OTHER THAN, of course, the usual "back in 1953" war stories about how
>the unit you were in in JAPAN suffered all those KIA's in KOREA, three years
>before YOU got tehre?

Now, now, little Steamy, use a different tissue to wipe your
chin after a toilet session. ["...tehre..."]

I've never claimed any "heroism" in Korea. I stated what was
known fact through third party references, mainly US military
information. It was Little Steamy who tried to add 2 + 2 and
got 22 instead of 4. :-)

Arithmetic problems seem to be endemic to PCTAs... :-)

> And PLEASE, tell us how any of that is germane to your CLAIMED intent of
>changing the Morse Code requirements in Amateur Radio.

Army radio station ADA (third largest in Army network at the time)
relayed 220 thousand messages a month in 1955 and never used
manual telegraphy for any of them. It had NOT used manual
telegraphy for any trans-Pacific radio circuits since 1948. The
only reliable long-distance communications medium at the time
was HF radio. ADA operated 24 hours a day, 7 days a week,
contrary to the "facts" of some defunct diplomats in here who

were never there.

HF radio. Also used by some radio amateurs. Ever hear of HF
radio, Little Steamy? Was done as primary long-distance
communications medium over a half century ago. Did you
think hams just discovered it last year or something? :-)

> Yes, I did "military communications" while on ACTIVE duty, Lennie, and
>as an enlisted.

"...as an enlisted..." WHAT? :-)

Of course you did, mighty macho morseman marnine person.
You pushed the PTT on an SCR-300's handset and sounded real
military marine like, I'll bet! Arf! Arf! Arf!

> Your sole claim to "have done more in "radio" is, by current evidence,
>limited to military duties in 1953-56. If you are the senior you are
>refering to, then your claim is hollow.

Nope, you whining little baby. I can type in the very short form of
my resume again, but then you have another temper tantrum and
yell and carry on so about a "CV!" :-) :-) :-)

>>The few, the proud, the hams?
>
> Yep. Leaves you out.

A valid, correct definition of the word "ham" is "butchered meat
of swine." Try NOT being on display in the shop window some
time. Your "meat" has long since spoiled in here.

>goals of ham radio.

Speaking seriously (if that is possible in this venue), there is no
consensus among a wide variety of the licensed ones on that
subject. What seems to be the case with some long-timers is
simply "turf" or the human territorial imperative...they seem to
think of their personal activity as the model for all others to
emulate. Most of that group profess to have become interested
as teen-agers, a time when they did not know much of
anything and thought they had discovered some wondrous
technology! They also seem to be a mind of guild or union
plateaus of expertise as if amateur radio (by definition not of
pecuniary interest) is also some kind of guild or union.

Those whose only knowledge of radio anything is limited to
official membership publications don't realize that there are

a large number of non-amateurs who have operated radios
for a long time, maintained them, calibrated them, designed
them. Many of that non-amateur group have done all that
in several different radio services.

The FCC does not sponsor or encourage amateur radio any
more than any other US radio service. It's not their legal
job. They just regulate US civil radio. The FCC does respond
to US citizens in regards to regulations on radio...all radio
services. They don't limit regulation communications only to
those who belong to one particular radio service.

> The existing license structure does not conflict with the stated goals. A
>Technician, for example, can remain one for life and still fulfill the goals
>of ham radio.

There is no consensus on those "goals." Amateur radio is an
activity engaged in without pecuniary interest. The opposite of
professional which, by definition, is for pecuniary interest. That
is basically a hobby or avocation activity. Are there some
national "goals" for hobbies?!?

Everyone needs to be careful about using the word "goals."
Personal goals are not necessarily those that govern national
goals. The FCC sets regulations for all civil radio in the USA
and all citizens.

> Given the above facts, why would the FCC even consider your learner's
>permit idea over the existing licensing structure?

Amateur radio does not involve moving vehicle safety or any
direct danger to human life. Automobile and aircraft piloting
does and that is much different than any hobby activity
involving radio, using radio for recreation.

The so-called need for an apprenticeship in radio operating is
an artificial construct of those conservative long-timers who
seem to be involved in "turf" thinking.

>> area during the week following that earthquake.
>
>Your statement is simply not true.

Let me correct that. Radio amateurs WERE THERE, but they
were not engaged in amateur distress/emergency
communications for any general public. At least two such
amateurs were too busy working their regular job restoring
damaged utility lines to engage in ARRL-approved
emergency/disaster/distress communications.

>> FEMA put in
>> its fly-away sat terminals featuring video message boards for
>> relatives of the victims. That was on TV news.
>
>That is what FEMA should have done. The presence of elements of

FEMA did it. The beginnings of SHARES did it. The Professionals
did the overwhelming brunt of it.

Tsk, tsk, tsk, you want to demean the pros just so that you can
shine noble light on amateurs. Boo hoo, you cry when your
bulb burns out...

>Professional public safety communications *can* stop operating depending
>upon the nature of the emergency. Radio amateurs have often assisted
>overwhelmed public safety communicators. That is not to say that any
>ham with an HT will be a boon to those public safety professionals.
>ARES groups which train on a regular basis can be a very valueable asset
>to those public safety professionals.

"ARES" isn't the only or even the prime grouping. The Auxilliary
Communications Service of the State of California was not
fully formed in 1994 (compared to two years ago) but they are
large and do not discriminate on what sort of certificate anyone

got years ago.

This newsgroup is NOT some auxilliary of ARRL so try to thicken
your skin to bear up under commentary that is not overwhelmingly
in favor of amateurs.

>Straw man alert! Professional systems do not always break down. Neither
>are emergencies always of a nature which overwhelm professional systems.

Not a strawman of any sort. A MYTH. Urban legend among
some amateurs.

>You have a superior
>"I've-been-a-professional-in-radio-for-half-a-century" attitude and you
>talk down to those who don't agree with you. I'm just pointing that out.

Bill (W7TI)'s main idea is the reduction in the number of license levels. The
learner's permit idea derives from the old Novice, which was only good for a
year (1951-1967) then two years (1967-~1975). It was not renewable until the
mid 1970s.
>
> Furthermore, how does a learner's permit further the stated goals of ham
>radio (experimentation, pool of trained operators, and so on)?

The idea is to have an easy-to-get license that gets a new ham started. Full
privileges require a more comprehensive test.

>For example,
>your learner's permit idea, with it sharp limitations, seems to actually
>restrain experimentation with other modes, bands, power, technology, home
>brewing, and so on. As such, it goes directly against one of the stated
>goals of ham radio.

For the past 34+ years, getting full amateur privs in the USA has required the
Extra license, and all the written exams connected with that license. I don't
think Bill wants the level of knowledge required for full privs to decrease. I
know I don't! So if the number of license classes decreases, the full-privs

exam must get bigger and cover more areas.
>
> The existing license structure does not conflict with the stated goals. A
>Technician, for example, can remain one for life and still fulfill the goals
>of ham radio.

Of course. The main thing is that Bill does not think the incentive licensing structure (or what's left of it these days) is a good thing. So we are discussing alternatives.
>
> Given the above facts, why would the FCC even consider your learner's
>permit idea over the existing licensing structure?
>
Less work for them, if it's done right.

But - is the current Tech/Gen/Extra system optimum for the ARS? Particularly considering how Techs get so little amateur HF but all of amateur VHF/UHF?

Let me ask you the same questions I asked Bill:

If/when S25.5 goes away and FCC dumps Element 1, what should the US license classes, requirements and privs be?

Obviously FCC isn't going to go for a more-complex system than we have now, but maybe a better system can be developed that will have wide ranging support in the amateur radio community.

Pfft again. I've copied well over 18wpm on the air solid for a helluva
lot more than just 150-180 words worth of time simply for the
practice.

> > If ya do it right though ya go "File, Mode", select RTTY on yer
> > logger screen and get it over with in seconds and get back to the run.
>
> You ever do it that way?

No, which is exactly why I'm planning to take a whack at it.

> Fact is W1AW sends the bulletin before the 'test even starts, so if

Keyed a "coherent msg"?? ME?? WTF kinda goofy question izzat?? If
perchance ya mean did I ever actually ship a msg thru NTS the answer
is emphatically no. NTS is 1915 ham radio epitomized. This is 2003.
You must have yer weekends mixed up, FD is not the ARRL Portable
Museums Weekend.

> And it's another easy 100 points for maybe 15 minutes on a traffic
> net. How long did ya say those 50 phone/ 25 CW QSOs would take ya?

Yeah, right, you're gonna pump out ten on 90 second centers outta
nowhere. Baloney.

> > My radio blew
> > up ten minutes into the event.
>
> My Southgate Type 6 and Type 7 never had that problem. Nor my K2.

Point please??

> > Duh? Shouldn't happen this year, new
> > reddio. Slick little boy toy, I can punch a button, jump off 15ssb and
> > be all over a satellite in seconds.
>
> With what antenna?

Antennae actually. If I actually do it prolly a cross-polarized Arrow
146/437-10 for UO-14. Up 145.975 down 435.070. Can be done with just
whips but I'd druther have ten elements worth of gain on .070 and nail
the sucker quick after it pops over the horizon and get back to the
run on 40. Should be a lotta FD stations looking for q's, maybe I get
to do a FD pileup for once. I'd have to build a tripod for it outta
2x3s and check it all out before the event. Hunnert points. You can do
it too, all ya hafta do is pop for the 2m & 430 band boards for yer
K2.

>
> How many points ya get for having a lot of choices available?

Hmmmm . . OK. Verus the band/mode options you have?

The UO-14 thing for one, any phone mode is another. 160/6/2/430 all
modes is another. Plus a couple other tricks I could pull @ 100 points
each if I actually gave a hoot about any of it. Which I don't. I'm a
helluva lot more interested in running some antenna tests than I am in
FD scores.

> > Yeah, yeah, and you ougta been there when I was rolling EUs on 80 wih
> > my ARC-5. Without any 866s.
>

Ya ducked the bullet, try again. I do FD and chase DX, bofum. What's
yer problem? FD is a lousy 24 hrs/yr. DXing is 24/7/365.

Brian:

To the best of my knowledge, there has never been a layoff in the history of my union (Amalgamated Transit Union, Local #842). I'm not saying there haven't been any, just none that I know of or ever heard of. I'll axe my shop steward about this next time I see him. The service I provide is federally mandated under the ADA, so it is unlikely that the Paratransit Operators in my company would be laid off (except for the part-timers). There is literally a building full of supernumerary admin types who would hit the street long before any drivers got laid off. On the contrary, a reduction in force in my company would more than likely result in our losing our part-time drivers, who don't have full union job protection -- and full-timers like myself would end up getting a bunch of overtime.

Yes. Neither one has any dashes in it. The fact that white men enter
amateur radio does not indicate that they are chauvinists or bigots.
That being the case, why'd you bring those words up or even bother with
your rant about white men being predominant in amateur radio?

Jim,

My *personal* view would be as follows:

1) fix the disconnect between power levels and technical knowledge required
for the tech license (either make the test a bit more comprehensive or limit
the
power to more reasonable levels ... the first option would make entry
harder,
so I prefer the second approach, so as not to make the bar discouragingly
high
for newbies)
2) add limited power HF access to the tech license (same bands as General?)
3) improve the General and Extra tests a bit ... not necessarily to make
them
"harder" but to make them more up-to-date and comprehensive ... if this
requires
a reasonable increase in the number of questions on the test, so be it.
4) fix outmoded bandwidth/baud_rate/modulation_type and any other technical
rules that limit innovation
5) pretty much leave the rest as is (if it ain't broke, don't fix it ....)

Just to be PERFECTLY clear, these are my *personal* views, NOT "NCI's
position."

Bet: The FCC is not about to put themselves thru another
"restructuring" of ham radio for years. We've only had three major
overhauls in last 52 years, that's one every 17+ years. History does
repeat itself, yes?

Stupid answer.

When I was a Novice, that "WN" call "bought" me some help when I made
mistakes on the air, and offers of assistance and advice at club meetings.

Never once did I take any "flak" over BEING a "Novice".

Stupid, Anderscum...really stupid.

Definitely. I got into the 2000 ARRL Sweepstakes with the sole goal of working a "Clean Sweep".

I did it in both modes with no more than 155 contacts in either contest! I hunted multipliers only, and threw in extra contaacts for one's I was unsure of or to throw some points to other friends I heard on.

Got the mugs!

No you're not. You just had this to say on CW DX? OT:

"I can easily imagine a first crack at this contest being very
discouraging. If you do jump into the thing don't let yourself become
discouraged. None of us were born with any of the skills required to
be competitive in any dx contest. We all started right where you are
now in this game, ground zero and you can do it too."

>Keyed a "coherent msg"?? ME?? WTF kinda goofy question izzat?? If
>perchance ya mean did I ever actually ship a msg thru NTS the answer
>is emphatically no. NTS is 1915 ham radio epitomized.

Not at all. Back then they used the trunk line system. NTS is post WW2.

>This is 2003.

So what's your solution? Where's the all-digital high speed UHF relay system
that we were told was just around the corner, as soon as the code test went
away?

>You must have yer weekends mixed up, FD is not the ARRL Portable
>Museums Weekend.

Points is points. Besides, the Southgate Type 7 is a decade newer than your
TS-940.
>
>> And it's another easy 100 points for maybe 15 minutes on a traffic
>> net. How long did ya say those 50 phone/ 25 CW QSOs would take ya?
>
>Yeah, right, you're gonna pump out ten on 90 second centers outta
>nowhere. Baloney.

What are you talking about?

The message to the SM - one little message, maybe 20 words, made up ahead of
time - is worth 100 points. Show up at net time, tell NCS ya got one for the
SM, stand by while savoring dinner, then pass the thing when he calls ya. Maybe
ya hafta QSY down 5 to pass it to another check in, whatever. Once it's gone,
NCS will let ay go toot sweet because he knows you're a contest station and
eager to get back. 15 minutes tops. I've been doing it for decades. Last year I
let the other op do it on SSB and it took him 20+ minutes 'cause he had to wait
in line and the SSB boys don't often do the up 5, down 10 thing.

How long will it take ya to make 50 phone or 25 CW QSOs to earn the equivalent
100 points?
>
>> > My radio blew
>> > up ten minutes into the event.
>>

>> classes, requirements and privs be?
>
>Bet: The FCC is not about to put themselves thru another
>"restructuring" of ham radio for years.

Probably true. The most likely scenario is they just dump Element 1 and do nothing else.

>We've only had three major
>overhauls in last 52 years, that's one every 17+ years.

Depends on what you call a major overhaul...

1951 gave us the basis of the scheme we have now.
1952-3 gave Generals and above all operating privs.
1968-9 gave us subbands on top of subbands
1990-1 gave us code waivers and a license with no code test
2000 simplified things somewhat, dropping two code test speeds and closing three license classes to new issues.

If ya lump 51-2-3 into one pile, it's about 16 years to the next redo. Then about twenty years to serious code test changes, and another decade to the last restructuring. Which was 3 years ago.

> History does
>repeat itself, yes?

Sure - lookit how things were before 1951. Three classes of license, one code test speed.....

>
Only way I can see FCC doing anything besides just dumping Element 1 is if there's a simple, well-thought-out restructure proposal put before them that gathers widespread support AND simplifies FCC's life.

>for the tech license (either make the test a bit more comprehensive or limit
>the power to more reasonable levels ... the first option would make entry
>harder, so I prefer the second approach, so as not to make the bar
>discouragingly high for newbies)

As we discussed before, RF safety at VHF/UHF is a big concern. To avoid taking
privs away from anybody, existing Techs could be allowed to run full power,
keeping their old license docs to show they really are "old" Techs.

>2) add limited power HF access to the tech license (same bands as General?)

If Techs get the same HF/MF as Generals, then the only reason to upgrade to
General will be to get more power. Is that really the most desirable incentive?

But Techs should definitely have a lot more HF/MF spectrum and modes than just
the old Novice bands.

>3) improve the General and Extra tests a bit ... not necessarily to make
>them "harder" but to make them more up-to-date and comprehensive ... if this
>requires a reasonable increase in the number of questions on the test, so be
it.

Yup. In fact, I think the idea should be to make the Tech written more focused on operational and theory fundamentals.

>4) fix outmoded bandwidth/baud_rate/modulation_type and any other technical
>rules that limit innovation

Gotta give us more detail than that.

I'd say the HF/MF bands should be divided by occupied bandwidth of mode, and forget about the baud rate or modulation type. What we now call the "CW/digital" parts of the band would be open to any documented mode that has less than, say, 900 Hz bandwidth. What we now call the "phone" parts of the bands would be open to any documented mode that has less than, say, 7000 Hz bandwidth. And the old "Novice" subbands would be open to any documented mode that will fit inside the subband.

>5) pretty much leave the rest as is (if it ain't broke, don't fix it ....)

Three classes of license, 10 year term, no age requirement, etc.
>
I forgot one question: What happens to existing Advanceds and Novices? Just leave 'em alone?

To some of the "unititated" (i.e. those amongst us who have never
done compliance enforcement) power levels by class may appear to be
a good incentive.

For enforcement purposes, it is a bloody nightmare.

Best to find another incentive, and meanwhile make knowledge of RF
safety at all power levels up to the maximum authorized power a
basic testing requirement for ALL classes. Anyone who can't or
won't exhibit that knowledge is not qualified to be permitted to
operate a radio transmitter, whether six years old or sixty years
old.

I don't think an incentive licensing system is a problem. The blue dress is a
different story.

>The blue dress is a
>past that cannot be changed, and there is no move towards removing incentive
>licensing. Therefore, I think the point is that to continue to dwell on
>either is somewhat useless.

The thing that really bugged me about the blue dress incident was the bald
faced lying connected with it.

As for removing incentive licensing, FCC seems to have moved from the idea that
amateur radio needs 5 or 6 levels of license to the idea that 3 levels are
adequate. Seems like a form of removal to me.

>skip past you anyway.

All depends how many others are answering their CQ. When the pickings get slim, they'll take the time to work anybody who calls.

--

Think about how many stations you've heard on the air this weekend, all using CW. Consider that there are lots more out there you can't hear due to propagation, antenna limitations, etc. Also those you won't hear because they're mostly in hunt'n'pounce mode rather than calling CQ.

Remember all those stations next time somebody says or writes that CW has no relevance in ham radio today, or that nobody uses it anymore.

From K4YZ:
>>Okay, this definition is possible. I have never seen anyone reference this
>>phrase to any other meaning than technical achievement.
>
> That's because the sphere of your experience is very minimal.
>
>Steve, K4YZ

Please list one example of where your definition is used, in a sentense. I cannot find an example of "radio art" other than technical achievement.

>(Except Vipul and BB, and I think we've been able to establish what kind of peanut gallery THEY are...)

The only thing you established is your hostile attitude.

> Only you, Leonard Anderson, for embellishing YOUR Army service on the
>memory of combat KIA's who died IN combat 3 years before you were ever in the
>unit.

Not related to amateur radio. If someone disagree's with you, you try to attack the person's background.

> The "fun" you are poking, Lennie, lands in your own lap. You've lied so
>often and misrepresented the truth that NO ONE believes or trusts you.

He seems to put forth some credible points, and they are well backed up.

Let's rewrite N2EY's paragraph:
>No matter what job, educational level, employer, or
>government/military service that a radio amateur has, if said radio
>amateur opposes K5YZ's views,

K4YZ will always find some fault with someone's background to use it to claim the person has no credibility in Ham radio.

However, he will go to great lenghts to defend a club's action for a club he has never been to just to prove the club did not use hype.

> he/she will be the target of
>K4YZ's insults, ridicule, name-calling, factual errors, ethnic
>slurs, excessive emoticons and general infantile behavior."

K4YZ insults, ridicules wherever he can. He has insulted alot in this thread. General infantile behavior is also pretty common. Name calling often includes "putz".

From: "KB9TMP"
>That's easy V just learn the code and you'll "Beat" the test, or if
>you feel you have to cheat it just learn the letters and pro signs.
>If you pass you'll have cheated the test.

I don't want to learn the code, okay? I have a BSEE and am just interested in the technical portion. Learning the code is a waste of time.

Having the code license actually works against me, since it shows one wasted time learning code. This takes away from other (legitimate) skills. I agree with that opinion. Also I just don't find code fun and I resent the higher license class being tied to the code.

>> However, that picture of the club Homebrewing, shown to people outside the

>doesn't like food?

If they had their picture taken, they probably posed for the picture. So, they had to put their utensils down.

The homebrewing photo is placed to show the club likes to Homebrew. However, noone in the club likes to homebrew. I see a contradiction.

2273. After S25.5 goes : restructuring US hams minds

Newsgroup: rec.radio.amateur.policy
Date: 2003-02-17 00:17:32 UTC
From: Anonymous <cripto@ecn.org>

The urgent thing to do is to restructure US hams minds. They always talk about "classes" for ham-radio.
Cool guys ! This is a hobby ... One class is sufficient, same power, same bands. No more privileges.
What is your problem ? You have a complex about the length of your dick ?

Its the same with oil, use smaller engines in your cars and less power in your ham stations, you will need less oil and you will not bother all the planet with the Iraq war to get its oil.

Think that you are only human beeings like others on the planet, not superior clones. You must understand that. Without the others you are nothing on Earth ... If all the guys on this planet made so much pollution than USA, you will be yet dead.

So, its time to change your mind ...

Terminator

If it's broke, it ought to be fixed ... but I doubt that you'd really be
taking away
something that's actually used by the vast majority of techs if you imposed
a limit

akin to what most "higher powered" mobiles put out ... say about 50W ...
Also, I think that most of the "old" techs who would likely be doing
something
more than just FM/packet/APRS with commercially built radios have probably
already upgraded to General or Extra already.
>
> >2) add limited power HF access to the tech license (same bands as
General?)
>
> If Techs get the same HF/MF as Generals, then the only reason to upgrade
to
> General will be to get more power. Is that really the most desirable
incentive?

Maybe not ... but they need to get "mainstreamed" so that they get a
(decent)
taste of HF ... to be honest, I'm hard pressed to think of a better "carrot"
than
giving them access but limiting their power (seems to be the way in the UK
and
when I worked from 4U1ITU, I gave preference to the new foundation class
guys from the UK, to give them "a rare one" and build some enthusiasm for
their
new privs ...)

> But Techs should definitely have a lot more HF/MF spectrum and modes than
just
> the old Novice bands.
>
> >3) improve the General and Extra tests a bit ... not necessarily to make
> >them "harder" but to make them more up-to-date and comprehensive ... if
this

be
> it.
>
> Yup. In fact, I think the idea should be to make the Tech written more
focused
> on operational and theory fundamentals.
>
> >4) fix outmoded bandwidth/baud_rate/modulation_type and any other
technical
> >rules that limit innovation
>
> Gotta give us more detail than that.

Needs more thought to be detailed in a really coherent manner, but current
rules
tend to stifle innovation (and before folks start flaming, I'm not talking
about doing
spread spectrum all over HF at high powers ... if at all ... the HF bands

aren't wide
enough for SS except at rather low data rates, though there could be some
applications
for that ... but those applications could use low power ... much less than 1
W)

> I'd say the HF/MF bands should be divided by occupied bandwidth of mode,
and
> forget about the baud rate or modulation type. What we now call the
> "CW/digital" parts of the band would be open to any documented mode that
has
> less than, say, 900 Hz bandwidth. What we now call the "phone" parts of
the
> bands would be open to any documented mode that has less than, say, 7000
Hz
> bandwidth. And the old "Novice" subbands would be open to any documented
mode
> that will fit inside the subband.

Sounds heavily slanted towards low data rate stuff ... and why would you
allow the
entire old novice bands to be consumed by one signal while restricting to
much lower
bandwidths elsewhere?

> >5) pretty much leave the rest as is (if it ain't broke, don't fix it
....)
>
> Three classes of license, 10 year term, no age requirement, etc.
> >
> I forgot one question: What happens to existing Advanceds and Novices?
Just
> leave 'em alone?

Seems to be the approach ... though why someone who's actually
interested/active
in ham radio and already has lifetime credit for the 5 wpm Morse test would
remain
a novice really stumps me ... as for the advanceds, I suspect that
eventually all of them
will either upgrade or go SK (not that I'm eager for the latter in any way
...).

Once the numbers in those classes drop to zero, they can simply be ignored.

For anyone who is interested, there will be a net tonight, in Dallas, pertaining to the activities of amateur radio operators during the Shuttle Recovery operations.

I am not real familiar with how this works, but I've been told the net will be "broadcast" (may be wrong terminology) over EchoLink. I do know the software for this can be had at http://www.echolink.org/el/ as well as other web locations. In fact, once the software is installed, with a computer microphone, you may ragchew with other hams all 'cross the world. How to "connect" for the net here in Dallas I haven't a clue. My guess would be the K5JD icon, near the bottom. Maybe there are some savvy enough with EchoLink to figure this out.

Thought you all might be interested in at least listening. Via EchoLink, it is my presumption that you could enter the net with recognition from NCS, whom I believe will be AA5QX, Jim Lawyer.

EchoLink is very cool. Too bad the mic input to my soundcard's shot or I would've been using it. Having tried it out (and then determining that my mic input is shot), I was still able to "connect" to different repeaters and "talk" via the computer chat interface (if the stations had themselves hooked up on a PC). The interface is very easy to use; I didn't even need a tutorial to guide me. Do check it out, it might be very interesting listening to what the Shuttle recovery group has to say.

I hear ya, Phil! It's my understanding that one of the big reasons the
incentive licensing changes of the '60s involved loss of spectrum rather than
power was that it is much easier to enforce a violation for frequency privs...

And of course it's an uphill go to get The Comission to add restrictions that
don't exist today.

But let me play devil's advocate and ask this question....

Once upon a time, Novices were only allowed 75 watts input - was there ever a
serious enforcement problem with QRO Novices? How about today, with the
low-power limits on the Novice subbands and 30 meters?

>

I agree with Carl Stevenson's idea that entry-level hams should have reduced power limits on VHF/UHF.

I don't think that entry-level hams should have the option of requesing Vanity Call signs. In fact, I would like to change the Vanity call sign program to eliminate the ability to request out-of-district call signs, with the retroactive cancellation of any which have already been assigned!

Of course, everyone's assuming that when S25.5 goes away at the International level, that the FCC will automatically drop the 5 WPM code test for General/Extra. Has there been any indication from the FCC that this was a fait accompli? It would be fun to see the FCC say, "We've done enough changing of the requirements, they're not set, live with them, we're not going to pay to print up a new set of rules just to drop the code test!" However, I'm sure that the whiners would eventually get their way with the government.

From a regulator's point of view, dumping Element 1 is a 'small' change!
That's why the smart money is that they will do just that. Someone needs
to think of a 'simple' way to phase out the closed licence classes of
Advanced and Novice, and to redistribute their subbands. The FCC have said
that we must reach a consensus on that, and then they will do it, but not

before. I bet this group has a few proposals for that.

Yep. Did both the checking and config. of the soundcard and the firewall was changed to allow the Echolink protocols, nothing. Called the place I bought the computer and the tech said that the mic input's likely shot and that since it was still under warranty, they would replace the soundcard.

>
> I don't want to learn the code, okay?

I didn't WANT to either but I did because that is the requirement!

>I have a BSEE and am just interested in
> the technical portion.

You don't need a higher class of license for just
the technical portion of amateur radio.

>Learning the code is a waste of time.

I disagree on that one. That is what I thought
before I learned it and upgraded, now that
I'm on HF I'm finding that it's not wasted time
at all. I just wish I could do it better.

>
> Having the code license actually works against me, since it shows one
wasted
> time learning code.

You have wasted more time on this internet NG
than it would have taken you to learn code.

>This takes away from other (legitimate) skills.

BULL, I haven't lost any of my other skills by
learning Morse Code!

>I agree
> with that opinion. Also I just don't find code fun and I resent the higher
> license class being tied to the code.

At first I didn't find it fun either, and still don't on my "bad days"
but at times it's rather fun. You just resent having to do something
you don't like to get what you want. It's called "life" get over it!

>
> >> However, that picture of the club Homebrewing, shown to people outside
the

> >but none of us were eating at the time. Does that show that our club
> >doesn't like food?
>
> If they had their picture taken, they probably posed for the picture.

No we didn't! The newspaper just came in told us who they were and
started taking pictures. All the photos were of us sitting at the table.

>So, they
> had to put their utensils down.

Breakfast was already over, we were having the meeting then.
>
> The homebrewing photo is placed to show the club likes to Homebrew.
However,
> noone in the club likes to homebrew. I see a contradiction.
>

How do you know they don't like to homebrew. Your
not spying on them at home are you? BTW you come
off as a "know-it-all" in here, if you do the same in
person that might explain why they don't want to do
any homebrewing with you. That BSEE might be
what's doing it, I am a certified GM service tech and
that seems to put the weekend mechanics noses out
of joint when I try to point stuff out to them. Any
more I just play dumb until they ASK for my help.

OK, Jackie. Sounds good if it's under warranty. One other thing to check - there are **THREE** connectors on the sound card; one is for speakers, one is for the microphone, and one is line input. Just make sure you aren't accidentally plugged into the line in as the microphone output is way to low for the line in and it will act as though you have no microphone. Good luck!

>I don't want to learn the code, okay? I have a BSEE and am just interested in
>the technical portion. Learning the code is a waste of time.

BSEE from who? Ronco? K-Tel?

And statistically, 50% of everything you learn in college is useless byt
eh time you get to the job market, but you still did it to get YOUR degree,
didn't you...?!?! Paid a lot of money for it too.

>Having the code license actually works against me, since it shows one wasted
>time learning code.

Refer to the above comment. This isn't the MOST stupid thing you've ever
posted, Vippy, but it's in the top three.

> This takes away from other (legitimate) skills.

Such as? Morse Code STILL ahs it's uses, Vippy.

>Also I just don't find code fun and I resent the higher
>license class being tied to the code.

The lazy and the spoiled usually do resent having to do something to get
something...They want it given to them for as cheap as they can get it,
regardless of how easily it can be come by.

>The homebrewing photo is placed to show the club likes to Homebrew. However,
>noone in the club likes to homebrew. I see a contradiction.

The contradiction is in YOUR assertion that they dislike homebrewing when
they obviously posed for a picture that promotes it.

Vippy, you just don't make sense. The funny part is you think you do.

>Please list one example of where your definition is used, in a sentense. I
>cannot find an example of "radio art" other than technical achievement.

"Sentense"...?!?! You claim to have a bachelor's degree?

How about in at least 30 years of QST, CQ and 73 that I am aware of where
the contributions of Amateurs has been refered to as the "radio art", Vippy?

>The only thing you established is your hostile attitude.

Let's see...Vippy hides his identity for 6 months until I take 30 minutes
to do a bit of detective work and "out" him. All the while he is making
disparging comments about Amateur radio in this and other forums.

He's posted COUNTLESS posts expressing significant anger, disapproval and
boldface lies in this and other radio-related forums about Amateur Radio and
THEN has the temerity to say >>I<< have a "hostile attitude"...?!?!?

BBBWWWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHA ! ! ! ! ! ! !

And Yes, Vippy, I am not laughing WITH you, I am laughing AT you!

>>Only you, Leonard Anderson, for embellishing YOUR Army service on the

>the
>>unit.
>
>Not related to amateur radio. If someone disagree's with you, you try to
>attack
>the person's background.

I didn't attack Lennie's background, Vipul. He left himself wide open to
this when he tries to credit himself with some kind of "honor-by-association"
with REAL men who were killed in action in the Armed Forces.

I doubt you were ever IN the Armed Forces (ours or anyone elses) and have
no concept of what that act means to Soldiers who DID make that sacrifice.

What I did in the Marines was piddling compared to what a lot of others
did before, during and since MY tour of duty. I don't dishonor them by trying
to lay some personal claim to what THEY did.

That scumbag you are defending doesn't see it that way.

>> The "fun" you are poking, Lennie, lands in your own lap. You've lied
>so
>>often and misrepresented the truth that NO ONE believes or trusts you.
>
>He seems to put forth some credible points, and they are well backed up.

Backed up with WHAT...?!?! The ONE and ONLY "point" Lennie has made that bears even the slightest semblence of "credibility" is that the once assumed need for Code proficiency due to the prolific use by the Armed Forces and Maritime services is no longer there.

That there are still OTHER reasons for Code proficiency are beyond him (and you too, it would seem).

>Let's rewrite N2EY's paragraph:
>>No matter what job, educational level, employer, or
>>government/military service that a radio amateur has, if said radio
>>amateur opposes K5YZ's views...(SNIP)

You need to pay attention to how you "rewrite" someone else's words, Vippy.

K5YZ might not like you making such assertions when he may not even know this forum exisits.

>K4YZ will always find some fault with someone's background to use it to claim
>the person has no credibility in Ham radio.

"Always"...?!?!

So far I have been able to sucessfully discredit somone three times based upon thier "background".

First of all is Lennie. Lennie has made countless posts of how he is a "radio professional", yet he makes error after error related to Amateur radio practice.

You may ask of the regulars here...I have publically stated that Lennie knows more about the inside of the box than I do. That's a "gimme" for him as I have no real way of knowing otherwise other than he cut's-and-pastes well in this forum. Hardly "fault".

What I DO fault with Lennie is his assertions of "fact" when his own practical experience is "squat". Furthermore, Lennie continues to make patently false statements that are either easily disproved, or which he refuses to validate with any "evidence".

The next was Mark Morgan. What can I say? Mark is an illiterate, docutmented pathological liar with absolutely no honor, self-respect or dignity.

And then there's you.

Tried to enter this forum with some aire of "knowledge", yet time after time you have been shown to be lacking in practical experience. You hid behind "Vshah101" all the while denying that my assertions of your inexperience and relative "novice" status were incorrect.

Thirty minutes of "detective" work outted KB1HMW and we found out that I was right all along.

You make assertions of "support" for Amateur Radio, then go into a CB radio nwsgroup and don't even take the time to create another AOL screen name in order to hide your tracks..Did you think you could make such outlandish and disparaging comments about Amateur Radio in that other forum and NO ONE would see...?!?!

That's pretty arrogant, but I get the feeling that you are ALL ABOUT being arrogant. Your

Now you are again "hiding" something and I can only assume it's becausee you have yet another secret that you don't want exposed.

And to top it off, you have taken up the cause of "defending" yet another Amateur Radio basher who is not only NOT an Amateur, but who has been clearly shown to be a pathological liar.

Again..What does that say about you, Vipul?

I am not impressed. Not even amused. You are a parody of the court jester. Lennie is the original.

What a pair.

Steve, K4YZ

> #$%^&!!! and a $@!$@!! for writing that.

Naaaaah...We just recognize where Vippy is getting his "facts" from,
Lennie.

The Learned in this forum (even you) know that "Ham Radio" did not become
QST. QST was an independent journal even before the creators of "Ham Radio"
were born.

Vipul, on the other hand, doesn't know the difference. His approach is
that if he slings enough mud something he's aiming at will get splatted.

>Steve Cannon will probably trot out one of his old set-pieces
> about "extras are So good because they expertly know how
> to tune their receivers..."

I am always tickled on how Lennie pulls stuff like this out when he has
nothing else to add.

>>>I have been an ACTIVE Amateur Radio
>>>licensee, probably before you were born, and I ahve NEVER heard of ANY
>>>"definintion" of "radio art" to be ONLY "technical achievement".
>
> Oh, my, another "OF" blowing his trumpet!

At least I have a trumpet to blow, Lennie.

>The first evidence of moonbounce came from US Army Signal
> Corps experimentation in Project Diana.

Nope. Amateurs and commercial stations as far back as the mid-1920's
reported "long delay echoes", some of which were (later) attributed to
terrestrial phenomena, other occassions were attributed to lunar reflectivity.

>That, in 1946, is considered the first.

...and about 20+ years after the phenomena was first nted.

>Outside of hobby "park flying" it is not possible to build
> cheap, safe rockets.

Not yet. But there will be.

>From a regulator's point of view, dumping Element 1 is a 'small' change!
>That's why the smart money is that they will do just that.

One paragraph, waiving Element 1 until a full rewrite can be done at some
future date.

>Someone needs
>to think of a 'simple' way to phase out the closed licence classes of
>Advanced and Novice, and to redistribute their subbands.

Why? FCC sees no problem with the way things are.

In fact, when ARRL and others proposed a free upgrade of Novices and Tech
Pluses to General back in 1998, FCC said no.

>The FCC have said
>that we must reach a consensus on that, and then they will do it, but not
>before. I bet this group has a few proposals for that.
>
The problem is simply one of not being able to meet all goals at once.

Take the Advanced for example. 88,000 of them, and slowly dropping.

If they get all privs, they've gotten a free upgrade to Extra that others had
to pass a test to get. Not going to be popular.

If they're reduced to General privileges, they've lost privs just to make the
rules a little shorter.

Neither idea is going to get much support.

Chances of that happening are slim-to-none, Larry!

How about this:

Entry level can have "six character" calls (2x3)
Middle level can have "five character" calls (2x2 or 1x3), OR they can keep
entry level call
Top level can have "four character" calls (1x2 or 2x1), OR they can keep
entry/middle level call

>Of course, everyone's assuming that when S25.5 goes away at the
>International level, that the FCC will automatically drop the 5 WPM
>code test for General/Extra. Has there been any indication from the
>FCC that this was a fait accompli?

Yes.

In the R&O to the 2000 restructuring, FCC addressed the various pro-code-test arguments and said they did not agree. FCC also said they saw "no regulatory purpose" in keeping any code test at all, EXCEPT meeting the requirements of S25.5.

And even though the majority of those who commented not only supported code testing, but supported code testing at at least 2 speeds, FCC dumped all but 5 wpm testing.

FCC made it as clear as they could without actually saying 'if/when S25.5 goes we'll just dump element 1'.

>It would be fun to see the FCC
>say, "We've done enough changing of the requirements, they're not
>set, live with them, we're not going to pay to print up a new set of
>rules just to drop the code test!"

I'd be very happy if they did just that. But I hold out little hope for such an outcome.

All FCC would have to do is issue some sort of order that Element 1 is waived for all applicants, pending a rewrite of the rules during the next review. One paragraph, replacing the current definition of Element 1. I think FCC could even cite their earlier R&O's on the subject and simply do it without needing a proposal or NPRM.

Another possibility, though less probable, would be for FCC to restart the whole restructure process yet again. It's been 5 years since they began the last one!

Main thing is that we hams should be proactive rather than waiting.

>> >discouragingly high for newbies)

I prefer the first approach too, but as K2ASP points out, enforcement could be
a big problem. FCC may not want to enact rules that are harder to enforce than
the existing ones.
>>
>> As we discussed before, RF safety at VHF/UHF is a big concern. To avoid
>>taking

>taking away
>something that's actually used by the vast majority of techs if you imposed
>a limit
>akin to what most "higher powered" mobiles put out ... say about 50W ...

If the vast majority are not running more than a few dozen watts, is there
really a problem at all?

Also, I'm pretty sure that a proposal to remove privileges from anyone won't be
popular enough to get enacted. Heck, we still see/hear griping about the
incentive licensing changes of 35+ years ago, from folks who weren't even
licensed at the time!

>Also, I think that most of the "old" techs who would likely be doing
>something
>more than just FM/packet/APRS with commercially built radios have probably
>already upgraded to General or Extra already.

I don't know about that. I know some Techs who are simply not interested in
HF/MF and its physically large antennas, unpredictable propagation, narrrow
bands, etc. These folks are into satellites, ATV, etc.
>>
>> >2) add limited power HF access to the tech license (same bands as

>(decent)
>taste of HF ...

I'd say give 'em all of 160 and the WARC bands, plus about half the General subbands on 80/40/20/15. Same power level as allowed for Novices/Tech Pluses today. All it would require is a rewrite of the part of the rules which specify the bands/modes allowed to Novices and Tech pluses.

>to be honest, I'm hard pressed to think of a better "carrot"
>than giving them access but limiting their power

All depends where you put the power limit. The current limit for HF Novice/Tech plus was set to be above that of the typical "100 watt" HF rig. Many hams never use more power than that, so they would have no incentive to upgrade. Heck, the most powerful ham rig I've ever used at my own station put out maybe 150 watts. (but at other stations....)

Now if you limit them to QRP levels (as is done for UK novices), there's a whole set of different problems, like rig selection and the double whammy of low power and antenna inefficiency.

>> But Techs should definitely have a lot more HF/MF spectrum and modes than

>> Hz
>> bandwidth. And the old "Novice" subbands would be open to any documented
>> mode
>> that will fit inside the subband.
>
>Sounds heavily slanted towards low data rate stuff ...

The problem right now is that in the area of HF mode subbands we have a strange set of rules about modes and bandwidths that, in my opinion, are based on a hodgepodge of ideas rather than a comprehensive plan.

For example, if somebody figures out a way to fit a voice signal into a 500 Hz occupied bandwidth (say, by buffering and accepting some time delays in transmission), they cannot use that mode in the CW/digital subbands. But they can use 850 Hz shift FSK Baudot RTTY, which is a much wider signal!

OTOH, data modes other than "image" are prohibited in the "voice" subbands, again regardless of bandwidth.

Why not keep all the narrow signals together, and likewise all the wide ones?

> and why would you
>allow the
>entire old novice bands to be consumed by one signal while restricting to
>much lower
>bandwidths elsewhere?

Some time back there was a proposal to "refarm" the Novice subbands. "Refarm" was just a euphemism for "widen the 'phone bands". Some of us thought a better use would be to create a few subbands where any mode that would fit could be tried out.
>
>> >5) pretty much leave the rest as is (if it ain't broke, don't fix it

>in ham radio and already has lifetime credit for the 5 wpm Morse test would
>remain
>a novice really stumps me ...

In many cases I know, long-time Novices are inactive folks.

The number of Novices has dropped by about half since Restructuring - far faster than Advanceds.

> as for the advanceds, I suspect that
>eventually all of them
>will either upgrade or go SK (not that I'm eager for the latter in any way
>...).
>
Agreed.

>Once the numbers in those classes drop to zero, they can simply be ignored.

Or written out of the rules.

Tech pluses will simply disappear in about 7 years even if nothing else is done, due to renewal as Techs. Novices will continue to drop, but we may see an aymptotic effect towards the end. Who gets to be the "last Novice"?
>
And here's a scary thought....

Back at the very end of 1952, FCC closed off the Advanced to new issues. No new Advanceds were issued for almost 15 years - and then the license class was reactivated. ~40,000 Advanceds in 1952, maybe 80% of that number in 1967. ~88,000 today.

Heh!! After sending the note out to the group and all that...I ended up falling asleep while watching a movie. I was woke up by my hubby at 10:30 and got to hear the net being closed.

I assume it went well. I am recovering from being sick since Christmas, ultimately ending up in the hospital with major surgery--so I couldn't participate in any of the Shuttle Recovery nets in any way. I told myself I was going to listen, but didn't even do that. I'm just glad hams were involved and could help.

Fuhgeddit. Power level regs are beyond useless. When was the last time
any ham in the ham bands got busted for running over the legal limit??

And the drift toward lower average power on HF has been underway for
years.

> >4) fix outmoded bandwidth/baud_rate/modulation_type and any other technical

Welp, if you say you can't hear a CW station, then you just shot down
the Morse Myth that CW always gets through.

As far as CW having no relevance, that's just not true. Lots of hams
enjoy using it.

The ARGUMENT is that a CW EXAM is no longer relavant. Give CW the
same exam that FM, SSB, RTTY, SSTV, FSTV, PACKET, PACTOR and PSK31
have.

Jim knows the mind of the FCC.

Why would 3 levels be adequate?

Why wouldn't 3 levels be optimum?

In the FCC's view, that is.

> 73 de Jim, N2EY

Interesting, 52% of all hams are Novice, Tech or Tech+. Tech+ and
Novice decreased by 70,819 but General and Extra only increased by
37,863. I suspect that much of the upgrade to Extra is by Advanced and
Generals who had those licenses prior to the the reduction in the code
speed requirement. So where are the Tech+ licensees going?

Does this have something to do with the FCC database not listing the
Tech+ anymore and movement from Novice or Tech to Tech with code credit
is reflected in the Tech license increase?

The overall increase is 1.54% or a little over 1/2 percent per year,
with Novice, Tech, Tech+ decreasing by 6.8% and General, Advanced,
Extra increasing by 12.6%. While the ARS does not seem to be growing
very much since May of 2000, the movement to higher class licenses and
Hf privileges (General, Extra) seems to be increasing at good rates.

Very interesting ... the original gate 2 grants (or gate 3, can't remember which now, but it was the gate
that allowed Extra class hams to apply whether or not they or a family member had ever held the call they
were requesting) were issued on November 4th - election day.

> Seems to me that what's needed here is a paper or CD-ROM Callbook to
> check up on who held what call when.

The vanity hq web site at http://www.vanityhq.com/ has some information on old call signs. It shows some
interesting grant dates for W3DW and AB0AL.

One more thing that is resulting from the ham activities in East Texas: we have had requests for licensing classes at our local club. In the last 2 weeks, we set up and filled up our next Tech class starting next week.

No, these likely aren't going to be 'home-brew' type of hams, they'll be 'public service' type of hams. Thank goodness the hobby has room for all of us (*smile*).

...and there are still plenty of "old" Technicians who, while not
particularly interested in HF are interested in unpredictable
propagation and BIG antennas on tall towers. These folks are doing weak
signal work on 50, 144, 432 and above with KW amps on SSB and CW. A
number are doing moon bounce on 6m, 2m and 70cm.

I must correct my previous post. Not just "thick skin" on the
head, thick skull too! Plus a touch of Alzeimers syndrome.

US ham radio is all about working DX on HF with CW. :-)

Ahem...take a look at the title of NPRM 98-143 and R&O 99-412.
it reads "biennial." "Biennial" as ordered by the Congress of
the United States. "Biennial" is defined as "happening every
two years" or as a "period of two years."

>Obviously FCC isn't going to go for a more-complex system than we have now,
but
>maybe a better system can be developed that will have wide ranging support in
>the amateur radio community.

To get INTO amateur radio, one cannot ALREADY be in it. If one
is already in it, there is no need to be concerned about getting in.

"Wide ranging support in the amateur radio community" is invalid
for any federal regulation applying to ALL citizens.

What you personally like is fine, but why do you
insist on subjugating others to what "you like"
or "don't like?"

If manual telegraphy is so wonderful, why didn't
you voluntarily learn it without having to follow
orders?

>> Having the code license actually works against me, since it shows one wasted
>> time learning code.
>

>You have wasted more time on this internet NG
>than it would have taken you to learn code.

Nonsense. The US military found out in WW2 that only
about one in eight recruits had the aptitude to learn
morse code successfully. Seven out of eight would
have a hard time becoming marginally proficient.
That's why one of the recruit tests (WW2 through at
least 1960) was a morse code cognition aptitude test.

>>This takes away from other (legitimate) skills.
>
>BULL, I haven't lost any of my other skills by
>learning Morse Code!

Unverifiable. We are not informed of those "other
skills" of yours...

>more I just play dumb until they ASK for my help.

Oh, my, a "certified GM service tech!" My late
neighbor Ralph Hurley was one of those. His nose
never got out of joint nor did anyone else at his
work at the service department. Ralph, bless his
soul, related well with other people.

Maybe if you quit waving around your certificate and
going "nyah-nyah" you might improve your working
relations with others?

>
>Please list one example of where your definition is used, in a sentense. I
>cannot find an example of "radio art" other than technical achievement.

Quite true. You must give him some slack since he's never been involved in any professional or military communications and his only experience, other than ham radio, is a short-time job as a purchasing agent of parts. He does not understand the context "state of the radio art" other than it might be a drawing on black velvet.

>>(Except Vipul and BB, and I think we've been able to establish what kind of

Interesting psychological quirk is that outrage and temper causes
him to even mis-spell his own call sign... :-)

>However, he will go to great lenghts to defend a club's action for a club he
>has never been to just to prove the club did not use hype.

Attilla is influenced only by images of greatness, illusions of
grandeur, uniforms and distinctive unit insignia. :-)

>K4YZ insults, ridicules wherever he can. He has insulted alot in this thread.
>General infantile behavior is also pretty common. Name calling often includes
>"putz".

The sad part is that Attilla is not a Jew and doesn't understand
that "putz" is a middle-European Jewish ethnic swearword
meaning "dickhead." Not even close to being acceptible
behavior by a superior amateur extra of the US amateur radio
corps, er, I mean community. :-)

See other message. First Presidential Unit Citation was awarded to the FEC Sig Svc Bn in 1954, the second Presidential Unit Citation awarded in 1955. I was stationed in the battalion from February of 1953 to the end of January 1956.

You L-O-S-E cheapskate.

Such a challenge is not relevant to amateur radio unless all you care about are uniforms and pretty medals and ribbons and things. Apparently all you care about is image. Try to confine your topics to something relevant at least to radio in here.

The Tennessee State Guard is NOT any part of the National Guard and certainly NOT a part of any USA military. They are essentially a sort of security guard unit wearing surplus US Army uniforms who are supposed to be caretakers of abandoned US military posts in Tennessee if the US military units normally at those posts are called to federal duty. They meet once a month according to their website information.

Tsk, tsk, tsk, Sgt Putz is one total sad sack...

My assignment in Japan (as part of a REAL US Army tour of duty) was the 8235th Army Unit, first named 71st Signal Service Battalion about 1947, then renamed Far East Command Signal Service Battalion in 1954. The 71st/FEC Sig Svc Bn served the Headquarters, Far East Command located in Tokyo, Japan. I was in the 8235th AU from February 1953 on through January 1956.

When the Korean War broke out in June 1950, FEC Hq ordered extra communications personnel to Korea. 19 members of the 71st, along with communications equipment, were on a C-54 that crashed on landing in Korea on June 1, 1950. The 19 and

the flight crew of 4 were killed. Five more members of the 8235th AU were casualties after that date and until the truce agreement was reached in July 1953.

Note: The numeric Army Unit designation is an alternate form of identification and is kept as-is despite the full title changes that might occur.

The billet for most companies of the 71st/FEC battalion was "Hardy Barracks," so named in honor of one of the 19 of the 71st that were the first casualties, Cpl. Elmer Hardy. That renaming was done in 1951. Hardy Barracks was also the site of offices of Central Command, US Army. It still exists as a US military site with that name although much reduced in size now with fewer units there.

None of the above has any direct relation to amateur radio (a MARS station was put up at Hardy in mid-1954)...but the 71st/FEC Sig Svc Bn did operate-maintain all HF radio communications for the Far East Command. HF radio was the only reliable long-distance communications means at that time.

The HF radio communications facility had the call sign ADA, that call sign still used by Headquarters, US Army Pacific, located at Fort Shafter, Hawaii. ADA transmitters in Tokyo in the 1950s had the following separate communication circuits working as a minimum, 24 hours a day, 7 days a week: 63 TTY, 9 Voice using 36 to 44 transmitters ranging in RF power output of 1 KW to 40 KW. Those circuits were to: Seoul and Pusan, Korea; Saigon, French Indochina (to become Vietnam later); Manila, Phillippines; Okinawa; US end-points of Anchorage, Seattle, Hawaii, and San Francisco. Additional radio circuits were also made to other places but not on a full 24/7 basis. Not a single radio circuit used on-off keyed telegraphy. None. HF radio, 24/7.

Battalion strength was approximately 1200 divided into four companies, Hq, A, B, C. A Company was composed of the photography unit, FEC Hq tasks directly at Pershing Heights (including crypto) and the downtown Tokyo central telephone exchange English-language section. B Company was located far northwest of Tokyo at newly-named Camp Owada, manning an HF receiving site jointly with the USAF. C Company was transmitters located first on Tsukishima Island, then northeast of Tokyo at Kashiwa, named Camp Tomlinson. A fifth Company was formed in 1956, D, for the Control Center personnel at Chuo Kogyo outside Camp Drake. D Company operated the "torn-tape" TTY manual message switching system for both receivers, transmitters, and landline TTY circuits.

The Far East Command Signal Service Battalion received TWO Presidential Unit Citations, the first about 1954, the second in

1955, both for excellence in signal corps work. That consisted
of a small cloth laurel wreath worn on the lower right sleeve of the
Class A unitform. For a second award the center of the wreath
bore a numeral 2. Few of us in the battalion thought much about
it at the time since it meant some extra sewing to replace the first
with the second.

I am proud to have done my military duty in the "71st" and honor
the names of all 71st members who died for their country. I'm
sure Eugene Rosenbaum, N2JTV, thinks accordingly although we
have not talked for over a half year (he lives on Long Island, NY).
Gene was in the 71st at the same time I was, but on a different
transmitters shift. I keep a list of all the 71st's casualties and
give them a mental salute from time to time.

HF radio as the prime long-distance communications medium
would enter its twilight in a decade and be relegated to just a
back-up communications facility for the US military by the
mid-1980s. For permanent locations, the US military depends
first on the DSN (Defense Switched Network), basically a
digital data medium which has built-in cryptographic facilities.
For sea-mobile, the USN depends on satellite relay and ELF
for submarine alert notices (a coded alert, not the message
itself). USAF uses a variety of communications depending on
mission requirements, everything from satellite relay to relay
through J-STARS aircraft to direct UHF and VHF comm to
ground units. US Army has everything of the above plus a
variety of shorter-range radio relay LOS and by Troposcatter.
DSN may be routed through any of the general systems
mentioned except for the ELF. HF radio is available for field
use, from low-power backpack to KW mobile but that is
generally older and kept in reserve as a secondary method.
No manual telegraphy is in any military communications
doctrine on land or in the air but some older HF radio
equipment still has a CW mode function capability (not all
equipment). For "behind-lines" intelligence gathering, there is
a variety of UHF radios which have medium-speed data rates
and encryption, capable of operating with satellites or airborne
J-STARS or other relay aircraft.

> The "fun" you are poking, Lennie, lands in your own lap. You've lied so
>often and misrepresented the truth that NO ONE believes or trusts you.
>(Except
>Vipul and BB, and I think we've been able to establish what kind of peanut
>gallery THEY are...)

None of what I have written about is any sort of lie. It is factual
and may be verified through a variety of third-party references
from NARA to the US Army Historical Center to the issues of
the Pacific Stars and Stripes military newspaper. There is
considerable military communications information on the Internet,

much of it found at the Foundation of American Scientists (FAS) large site (some of it old but newer items only five years old). None of the information written above is classified and a catalog of military signal equipment is found at the Army Training and Doctrine Command Digital Library, cleared for public viewing. Much technical information on military doctrine and equipment is also available from the US Government Printing Office (branch stores in major US cities), but that costs a nominal fee as their publications are mostly on paper (a few are now on CD).

For personal references of members of the 71st/FEC Bn, there is myself and Gene, N2JTV. When I was in the battalion, the transmitters officer-in-charge was Capt. William Boss, a licensed radio amateur and maintenance NCOIC SFC Donald Ross, holder of an amateur, first 'phone, and first 'telegraph licenses. Callsigns of those two are not remembered nor do I know if they still live. I have been in contact with James Brendage, a retired civilian who had worked at both ADA transmitter sites and for the USAF as a civilian engineer when the USAF took over all HF radio functions from the US Army in 1963.

> Pitiful, Lennie...You're just pitiful.

Such a comment was expected from a so-called superior amateur interested not in radio or radio techniques but in verbal combat for the sake of fighting. That reflects badly on the US amateur radio community.

> (Rest of anti-volunteerism and anti-veteran tripe snipped...Sam
>Anderscumisms we've heard before)

"Anti-veteran?" Hardly. I do not consider veterans of state guard units as having much importance or deserving of respect for pretending to be army soldiers. State guard units are NOT with the federal government or the US military.

"Anti-volunteerism?" No. I do not believe in gratuitous praise heaped upon any group that has done no more than any other citizen could do. Volunteerism by amateurs (in anything) is fine, but it is ridiculous to claim that such volunteers are better than professionals in a particular task.

> Putz.

Sgt Putz does not need to sign his name after a message.

Seems like the SIX levels of amateur licenses were five too many to me...unless it was to segregate the newbies and less superior (to the long-time extras mind) amateurs?

Why not just have a single license? Amateur radio is a hobby, not a guild, not a union, not a profession.

If you need rank-status-title and other posturing of your whatevers, just join a state guard unit... :-)

>I don't want to learn the code, okay?

OK, fine. So you can't operate on amateur HF/MF until the rules change. And the rules won't change unless the treaty changes.

>I have a BSEE and am just interested in
>the technical portion.

Great! Enjoy!

>Learning the code is a waste of time.
>
I have BSEEand MSEE and I say it's not a waste of time at all.

>Having the code license actually works against me, since it shows one wasted
>time learning code.

You have spent far more time posting here than it would take most people to learn enough code to pass the 5 wpm test.

How you spend your time is up to you, but the way you write says that learning code is a waste of time for everyone, not just for you.

>This takes away from other (legitimate) skills.

Is Morse code not a "legitimate" skill for a ham to have?

>I agree
>with that opinion. Also I just don't find code fun and I resent the higher
>license class being tied to the code.

Nothing anybody can do about it until the treaty changes.

Did you get to pick and choose the courses you wanted for the BSEE, and reject any that didn't interest you? Or did you have to learn some stuff that was of no interest but was required for the degree?

(I'm NOT saying a ham license is an academic certificate, just that one doesn;t get to pick and choose.)

>The Tennessee State Guard is NOT any part of the National
> Guard and certainly NOT a part of any USA military.

You are again redirected to the relationship between the Tennessee State Guard and the Tennessee State National Guard. Part of the TNSG's stated mission is to support Family Services and to man evacuated armories in the even of a Guard activation.

>They
> are essentially a sort of security guard unit wearing surplus
> US Army uniforms who are supposed to be caretakers of
> abandoned US military posts in Tennessee if the US military
> units normally at those posts are called to federal duty. They
> meet once a month according to their website information.

You attempt to define it to the least common denominator without having any first hand experience of thier training. This, of course, to further denigrate yet another volunteer function, this one staffed by Veterans.

You got a "two-fer"...Got to "diss" volunteers AND veterans in on fellled swoop.

>My assignment in Japan (as part of a REAL US Army tour of duty)
> was the 8235th Army Unit...(SNIP)

Yes, yes, yes, Lennie...We've heard it over and over.

It still does not make you any more knowledgeable in Amateur Radio matters, nor does it "score" you any points for having tried to embellish your career by associating yuorself with KIA's before.

>None of the above has any direct relation to amateur radio...(SNIP)

Exactly. But you DID find it necessary to recite it for the billionth time.

>I am proud to have done my military duty in the "71st" and honor
> the names of all 71st members who died for their country. I'm
> sure Eugene Rosenbaum, N2JTV, thinks accordingly although we
> have not talked for over a half year (he lives on Long Island, NY).
> Gene was in the 71st at the same time I was, but on a different
> transmitters shift. I keep a list of all the 71st's casualties and
> give them a mental salute from time to time.

Next time try using all five fingers in a traditional military salute, and without doing it so as to try and make YOU look like some kind of rear area war hero.

You were a radio clerk in a rear area radio station. Period.

>None of what I have written about is any sort of lie.

About the unit history? I am sure it's reasonably correct.

But I was not addressing the history of the "71st". I was addressing YOUR histroy in this newsgroup, Pinnochhio.

>Such a comment was expected from a so-called superior amateur
> interested not in radio or radio techniques but in verbal combat for
> the sake of fighting.

I don't need to be "superior" in ANY venue to see through YOUR lies, Your Putziness. You are as transparent as glass.

>"Anti-veteran?" Hardly. I do not consider veterans of state
> guard units as having much importance or deserving of respect
> for pretending to be army soldiers. State guard units are NOT
> with the federal government or the US military.

They are not "pretending" anything, Lennie. Thier uniforms do not say "US ARMY".

>"Anti-volunteerism?" No. I do not believe in gratuitous praise
> heaped upon any group that has done no more than any other
> citizen could do.

OK, what have YOU done, Your Scumminess? TELL us about all the organizations you support (and I don't mean by dropping a buck in thier bucket at Christmas).

You consistently denigrate the services of volunteers in all pursuits. I ahve yet to see you say a single complimentary thing about ANY one or ANY agency that provides, supports or utilizes volunteers.

None.

>Volunteerism by amateurs (in anything) is
> fine, but it is ridiculous to claim that such volunteers are
> better than professionals in a particular task.

In some cases volunteers ARE better than professionals. It happens.

>>Putz.
>
> Sgt Putz does not need to sign his name after a message.

Then let me clarify who it was intended for...

YOU'RE a putz.

Better?

No, Lennie, I asked what were the effective dates of the awards...for WHAT PERIODS were they awarded for?

Not WHEN were they awarded. Very few awards are issued immediately upon recommendation.

If those dates were when you were there, you will receive your nickle (and appropriate acknowledgement in this forum).

>You L-O-S-E cheapskate.

Either way, I win. A nickle invested in a bet wih you is more than YOU ever invested in Amateur Radio.

You're a putz.

Didn't you follow orders when you were a little soldier?

> I've never had any requirement for "the code" in a half
> century past...and I started out in Big Time HF comm.

Lemme clue you in: You won't be getting that "Extra right out of the
box" any time soon. There is a *requirement* of 5 wpm morse for HF
access in ham radio.

> >You have wasted more time on this internet NG

>
> Why? FCC sees no problem with the way things are.

And, in reality, the Novice bands are available to all Tech+, Gen, Advanced
and Extra anyway.

Likewise, even if the Advanced hams all vaporized tomorrow, the "advanced
subbands are are fully usable by Extras. Indeed, today that is the major
benefit
of going from General to Extra...you get all frequency privileges.

> >The FCC have said
> >that we must reach a consensus on that, and then they will do it, but not

That's 99 QSOs per hour, every hour, for more than a day and a half. Single op, too.

Simply amazing.

They must have been referring to technical accomplishment. Still, you did not cite an example from one of these magazines. Also, these are "Ham" radio magazines, so they follow the same hype that Hams do.

Please provide a sentence where "radio art" is used to mean non-technical achievement, from an unbiased source.

>didn't you...?!?! Paid a lot of money for it too.

I don't believe that 50% learned is worthless in EE degree. N2EY (probably)
will agree. 50% of skills useless by the time you learn them could be true of
trendy IT "field".

>>Having the code license actually works against me, since it shows one wasted
>>time learning code.
>Refer to the above comment. This isn't the MOST stupid thing you've ever
>posted, Vippy, but it's in the top three.

Someone else claimed it. I agree with it. If you have a General class license,
it shows you learned the code. This is a waste of time for technical skills.

2344. Re: The RIGHT Stuff

From N2EY:
>>Learning the code is a waste of time.
>>
>I have BSEEand MSEE and I say it's not a waste of time at all.

It is a waste of time for those that have a degree or are just interested in the technical aspect. The exception is if you TRULY enjoy it. In that case, it is not a waste of time. You may truly enjoy it,so it is not a waste of time for you. I do not truly enjoy Morse code.

>How you spend your time is up to you, but the way you write says that
>learning
>code is a waste of time for everyone, not just for you.

It should not be tied to the higher licence class.

>>This takes away from other (legitimate) skills.
>
>Is Morse code not a "legitimate" skill for a ham to have?

Its legitamate for a Ham. Not for one who wants to increase technical skills and does not enjoy Morse code.

>Did you get to pick and choose the courses you wanted for the BSEE, and
>reject
>any that didn't interest you? Or did you have to learn some stuff that was of
>no interest but was required for the degree?

There were many course I didn't like. Many even were irrelevant. To satisfy some rationalization, or to act as filler courses to get the required amount of credits, or for a variety of reasons, they were tied to the degree. That does not make it right. There is not need to do the same thing to amateur radio.

>(I'm NOT saying a ham license is an academic certificate, just that one
>doesn;t
>get to pick and choose.)

One has the ability to use common sense and not tie the code to the technical license class.

>>The homebrewing photo is placed to show the club likes to Homebrew. However,
>>noone in the club likes to homebrew.
>
>How do you know?

I can ask someone in the photo if they like homebrewing. What proof do you need?

Morse code, dissected:

It is possible that in the early stages of learning an "audio-motory" skill such as Morse code , a quasi-phonological approach to temporal processing is used, which prioritizes sequence over temporal precision, and that what marks the acquisition of a motor skill is the changeover to from sequence-priority processing to time-priority processing.

It is this state of "time-priority" processing, when one can say they "learned" the code. This state is not achieved at 5wpm. (It is still a waste of time, however). I have successfully learned another real-time encoding/decoding symbol set scheme, with Kinaesthetic processing (because I enjoy it). Once one reaches the state of time-priority processing, one cannot unlearn the code.

After the changeover to time-priority processing, one may lose the ability of sequence priority processing. This is called "motor-memory".

The end result is communication over a medium, which despite hypothetical scenarios, can be achieved by voice. If you don't enjoy it, or find it relevant, don't learn it. Don't be pressured into it, just to satisfy some "requirement".

Hard to tell if there is compliance where modern enforcement is on a
reactive (complaint-driven) rather than a proactive ("on patrol")
basis.

I can relate first hand to what it takes to prove that a "CB style"
operator is operating with more than 4 watts - the following is no
secret to anyone who has been so inspected:

It takes two technically-qualified agents (engineers or
technicians). The signal is df-ed to a particular antenna, (yes,
for at least 25 years the FCC has had hand-held concealable
equipment that can differentiate between two antennas on the same
house on close-in df) and the level of the signal is noted on a
spectrum analyzer for reference. One agent goes into the premises
to attempt the inspection while the other agent observes the antenna
(if it is rotatable) and the signal level. Meanwhile the inspector
is usually kept waiting outside while the very characteristic
"tinkle" sound of PL-259s being hastily uncoupled from equipment is
heard inside before being admitted. The inspector measures the
transmitter power (which by that time is at or below legal limits
umless the operator is stupid as well as sleazy) with an in-line
wattmeter while the other agent notes the level of the signal on the
spectrum analyzer. From that it is easy to calculate the power of
the original "before inspection" transmission. If the antenna is
rotated or the spectrum analyzer moved between those readings there
are certain "fudge factors" applied in the operator's favor.

Contrast that with frequemcy or occupied bandwidth measurements
which do not require two agents and can be done at long range.

>Do you think today's test questions and methods are an adequate determination
>of that knowledge?

Not being involved with the VE program (by choice) I could not say
one way or another, but from the comments that I have heard about
the level of today's testing, I have my doubts.

I could be 100% wrong, though. Ed Hare (whom we haven't heard from
lately) could speak with more authority.

The last time that -I- busted a licensed ham for overpower was
the oiperator at the Peoples Temple in San Francisco. Remember
them - the stateside terminal of the Jonestown settlement of
Massacre fame in 1978.

However, unlicened "CB style" operators get busted routinely when
the complaint volume gets great enough and there are extrinsic
factors involved to warrant assigment of the necessary crew.

Yes but - the "Biennial" refers to the requirement to review SOME service's rules in depth every two years. There's such a review going on all the time. We in the ARS had ours in '98. Now it's someone else's turn.

The last thong that Billy Tauzin thinks of when he thinks of "getting" the FCC is Amateur Radio Service Rule Revisions. He has much bigger fish to fry.

As Bill Cross intimated in his famous statement two years ago - we have to keep our head down and stay out of the crossfire.

Tell that to Bill Cross and the other staff members who decide when to make revisions and what they should be. He's not going to do anything unless there is a consensus WITHIN the amateur community. That's part of the "self policing" that the Commish' expects from the licensees in the ARS.

He said so in Dayton two years ago.

But then again you are not a licensee nor are you within the amateur radio community.

Yup - down from 57% in May of 2000.

>Tech+ and
>Novice decreased by 70,819 but General and Extra only increased by
>37,863. I suspect that much of the upgrade to Extra is by Advanced and
>Generals who had those licenses prior to the the reduction in the code
>speed requirement. So where are the Tech+ licensees going?

Three places:

- Some are upgrading to General or Extra. Note that Tech+s who can show they were license-tested before March 21, 1987 don't need to take any tests to upgrade to General, but they must show up at a VE session, do the paper, pay the fee etc.

- Some are dropping out (not renewing).

- Some are becoming Techs. Since April 15, 2000, FCC has been renewing Tech Pluses as Techs, and leaving it up to the license holder to maintain records of being a Tech Plus. So even if no other changes are made to the rules, there will be no more Tech Pluses in about seven years from now.

>Does this have something to do with the FCC database not listing the

Chill, nursie. We all see the steam from your ears...

> And statistically, 50% of everything you learn in college is useless byt
>eh time you get to the job market, but you still did it to get YOUR degree,
>didn't you...?!?! Paid a lot of money for it too.

Of course, spoken by some Dean of Admissions or
professor? Or by some amateur dumshit who hasn't
gotten an academic degree OR worked in any sort of
academic or professional area other than once filling
out forms as a purchasing agent?

Or is it the amateur saying others make "countless errors"
when he, again, tries to bite somebody with "...byt eh..."?

You ARE one vindictive little son of a beeper, Attilla. You
will make fun and ridicule against anyone who goes out of
their way to learn something. [see the attempted defamation
of "15 years of night school" as a pejorative in here often
enough]

>>Having the code license actually works against me, since it shows one wasted
>>time learning code.
>
> Refer to the above comment. This isn't the MOST stupid thing you've ever
>posted, Vippy, but it's in the top three.

Tsk, tsk, tsk. Still sucking that dill brine, Sgt Putz?

Hard day at the orifice?

Hospital administrator took away your keys to the medication
cabinet?

>
>> This takes away from other (legitimate) skills.
>
> Such as? Morse Code STILL ahs it's uses, Vippy.

"...ahs...?" What's an "ahs," mighty macho morseman?

Could that be one of the "countless errors" others commit
by mighty macho morsemen never do? :-)

>>Also I just don't find code fun and I resent the higher
>>license class being tied to the code.
>
> The lazy and the spoiled usually do resent having to do something to get
>something...They want it given to them for as cheap as they can get it,
>regardless of how easily it can be come by.

Ooopsie. Nursie got the wrong pill bottle again? Tsk, tsk.

Here we go on another jaunt down ONE HAS TO *WORK*
AT HAVING FUN IN A HOBBY from one of the afflicted
brain-dead old farts ("thirty years a ham!").

Work. Slave. All for "dedication and resolution to show the
amateur community!" Yeah, like everyone has to be
subservient to the wishes and demands of the BDOFs
wearing distinctive unit insignia.

Go for it, mighty macho morseman, dress down them nasty
young recruits in your hambone boot camp. Show 'em who
is god. [you are, of course, there was never any doubt]

Make everyone WORK, WORK, WORK.

>>The homebrewing photo is placed to show the club likes to Homebrew. However,
>>noone in the club likes to homebrew. I see a contradiction.
>
> The contradiction is in YOUR assertion that they dislike homebrewing when
>they obviously posed for a picture that promotes it.

The only "contradiction" Attilla the Ham makes is attempting
to pass hisself off as a civil human being who knows something
about radio.

> Vippy, you just don't make sense. The funny part is you think you do.

Steamy, you've lost it again, sitting on standby, garbled
modulation, and your electrolytics are all leaking out. Go
wipe up the mess with some of your extra certificates. Get
a better human disguise, alien, your echoes are long delayed.

YES. That's one of many colloquial names for that garment.

> I've been wearing flight suits in one form or another for over 30 years
>and never heard them called "poopie-suits", by USAF, USN, USMC or even (dare
>I say it...?!?!) CAP members.

Then you haven't been listening, Attilla the Ham. There are
dozens more euphamisms for flight coveralls and flight
helmets and other things in air crew quarters. They are
THERE and no amount of exaggeration of your "experience"
in changing black boxes (under instruction) is going to make
you some definitive etymological source.

> Like I said, Your Scumminess, I don't make an issue of "off topic" issues
>except with you, and that's only because you delight in resorting to
chastising

Hell, boy, you can't even get ON-topic subjects correct!

You've flipped out, lost it, switched off, drifted off frequency
a long time ago and live in a world of fantasy, certificatism,
and uniforms with distinctive unit insignia.

>were born.

Oh? Ham Radio magazine's first issue came out in 1968. Were the publisher (Skip Tenney) and editor in chief (Jim Fisk) infants in that year. HR remained in publication for 22 years until Communications Technology, Inc., sold it to CQ Communications.

Attilla the Ham has maintained HR "went defunct," as some kind of epithet. To Attilla it wouldn't matter since most of the material in 22 years of monthly issues was above Ohm's Law in level and such is beyond what Attilla can grasp. Even after three decades as an amateur.

Simple arithmetic rules are seemingly beyond the BDOFs. Some say that "1 = 26" (Kellie), "7 x 24 = 148" (Heil) and Reverend Jimmie Callsign, pastor of the newsgroupies, can see trends in numbers that elude statisticians. :-)

> Vipul, on the other hand, doesn't know the difference. His approach is
>that if he slings enough mud something he's aiming at will get splatted.

Hello? Anyone there? Just who has signed posts with epithets
like "Putz" and "Creep" for months in here?

>
> Nope. Amateurs and commercial stations as far back as the mid-1920's
>reported "long delay echoes", some of which were (later) attributed to
>terrestrial phenomena, other occassions were attributed to lunar
>reflectivity.

"Attributed?!?" By whom? Some articles in ANALOG magazine
a few decades ago by a member of the British Interplanetary
Society? Show the EVIDENCE, Attilla. At least come close to
some kind of definitive source.

THE FIRST EVIDENCE OF MOONBOUNCE CAME FROM US
ARMY SIGNAL CORPS EXPERIMENTATION IN PROJECT DIANA.

The subject was MOONBOUNCE...using the moon as a reflector.
Not some mythical "long delay echoes" said to be observed by a
few and verified by no one. PROJECT DIANA. Hello? 1946.
Definitive evidence, witnesses from the press, echo waveform
photographs, verification by others doing the same thing
afterwards. It was in Real radio literature and recognized as first
by the rest of the Real radio world, not by some UFOnaut.

I guess that I have to use all capitals in order to make things
clear to your few neurons, Attilla.

>>Outside of hobby "park flying" it is not possible to build
>> cheap, safe rockets.
>

>> a year go to industry for minimum cost and maximum
>> reliability. Anything else is pipe-dream nonsense.
>
> More ignorance and arrogance. Market forces are already driving for
>alternatives to NASA and ESA assets.

Attilla is now a meteorologist? Did he think so because
he once read a meter?!?

Go reasearch radiosondes and their use, their history,
Attilla. Try NOAA "assets" on radiosondes before you
make yourself another ass again.

You can find out about meteorology, too, and how all those
little isobars get on weather charts...did you think some
artist drew them because they looked nice that way?

If you weren't known as a total ignorant slut about radio
technology behind the front panels you could learn about
pencil triodes by the tens of thousands installed in little
plastic boxes containing PC switches and one-shot
batteries tracked by radar-like directional receivers having
automatic tracking.

>>Membership organizations rationalize their statements by

>
> "Sentense"...?!?! You claim to have a bachelor's degree?

Tsk, tsk, tsk, alleged 'amatuer,' you do NOT want to go there.

[poor baby gets all uptight and frequently makes writing errors,
one common one being spelling 'amateur' as "amatuer"]

> How about in at least 30 years of QST, CQ and 73 that I am aware of where
>the contributions of Amateurs has been refered to as the "radio art", Vippy?

Oh? Now Attilla the alleged educated Ham claims "awareness?"
:-)

Other than paintings on black velvet, what does the alleged
educated Attilla the Ham consider as state of the art in amateur
radio? Having one-tube regenerative receivers showing up on an
annual basis? Two-transistor transmitters built in tuna cans?

>>The only thing you established is your hostile attitude.
>
> Let's see...Vippy hides his identity for 6 months until I take 30 minutes
>to do a bit of detective work and "out" him. All the while he is making
>disparging comments about Amateur radio in this and other forums.

Awwww...somebody said something nasty about "the corpse"
and the dill sergeant came all unglued? Another person who
ignored your mighty command to get down and give you twenty?
Tsk, tsk, tsk, Sgt Putz.

Clue: This is NOT boot camp, you are NOT an NCO anymore,
and few in here are recruits. Most importantly, Sgt Putz, you
are NOT entitled to act like a barbarian by a single certificate
you own and have yet to act in a civil manner to anyone here or
anywhere else who disagrees with your opinions.

Google has many archived posts where Sgt Putz has signed
his posts by "Putz," sometimes adding "Creep" (another family
surname?), unaware that "Putz" is a middle-European Jewish-
ethic epithet for colloquial English "dickhead."

That's NOT anywhere close to being civil.

> He's posted COUNTLESS posts expressing significant anger, disapproval and
>boldface lies in this and other radio-related forums about Amateur Radio and
>THEN has the temerity to say >>I<< have a "hostile attitude"...?!?!?

Sgt Putz has a very hostile attitude, confrontational, aggressive
and all from a decided ignorance of anything technical in radio or
in electronics pertaining to any radio. He cannot play well with
others. Sociopaths are like that.

> And Yes, Vippy, I am not laughing WITH you, I am laughing AT you!

Sociopaths think nothing of laughing at others, attempting to
ridicule them from some imagined superior state. Since they
cannot understand a subject under discussion, they attempt
to assassinate the character of anyone disagreeing with them.

>>Not related to amateur radio. If someone disagree's with you, you try to
>>attack the person's background.
>
> I didn't attack Lennie's background, Vipul. He left himself wide open to
>this when he tries to credit himself with some kind of "honor-by-association"
>with REAL men who were killed in action in the Armed Forces.

Tsk, tsk, tsk. [does everyone need me to repeat what I've written
about my military unit and its history?]

> I doubt you were ever IN the Armed Forces (ours or anyone elses) and have
>no concept of what that act means to Soldiers who DID make that sacrifice.

Tsk, tsk, tsk. Attilla the Ham tries to put on some kind of uniform
and winds up in a poopie-suit (having "distinctive unit insignia").

> What I did in the Marines was piddling compared to what a lot of others
>did before, during and since MY tour of duty. I don't dishonor them by trying
>to lay some personal claim to what THEY did.

Hello? Did someone say something about "in hostile action
seven times" plus something about "saving a fellow marine?"
:-)

No identification of when, no identification of where, no reference
to third-party sources of reference for any of those "seven times."

A fish story is still a fish story, regardless of what it is about.

Attilla the Ham is desperately trying to find some "opening" of
attack. He cannot find that so he manufactures something
never before made. If Attilla the Ham's statement were true,
then I would be a ghost in this machine, having died in 1950.

:-)

> That scumbag you are defending doesn't see it that way.

Nobody "sees" things like Attilla the Ham.

>>He seems to put forth some credible points, and they are well backed up.
>
> Backed up with WHAT...?!?! The ONE and ONLY "point" Lennie has made that
>bears even the slightest semblence of "credibility" is that the once assumed
>need for Code proficiency due to the prolific use by the Armed Forces and
>Maritime services is no longer there.

Tsk, tsk, tsk. Attilla the Ham not only sees things but is quite
blind to what has been posted in here...references of many kinds,
all credible. Attilla ignores those, thinking his sword of epithets
can cut through anything. :-)

> That there are still OTHER reasons for Code proficiency are beyond him
>(and you too, it would seem).

Yes...the common PCTA BDOF refrain is "do as I did because
I am your superior." :-)

>>K4YZ will always find some fault with someone's background to use it to claim
>>the person has no credibility in Ham radio.
>
> "Always"...?!?!

Absolutely. :-)

> So far I have been able to sucessfully discredit somone three times
>based upon thier "background".

"...thier...?" Some mighty warrior cut himself in the club foot
again with his sword of epithets? Tsk, tsk, tsk.

:-)

> First of all is Lennie. Lennie has made countless posts of how he is a
>"radio professional", yet he makes error after error related to Amateur radio
>practice.

"Error after error?" :-)

Of course. Disliking certain things about amateur radio regulations
is a capital crime in the world of Attilla the Ham. To say anything
opposite to his mighty morse magnificence is a higher crime, one
of sacrilege against his godhood.

Attilla (formerly Sgt Putz) flipped out years ago. He is in some
Twilight Zone, a black-and-white rerun fantasyland no one else can
see. :-)

> You may ask of the regulars here...I have publically stated that Lennie
>knows more about the inside of the box than I do.

Anyone knowing simple Ohm's Law knows more about the
"inside of the box" than Attilla. :-)

>That's a "gimme" for him as
>I have no real way of knowing otherwise other than he cut's-and-pastes well in
>this forum. Hardly "fault".

Oh, my. "Thirty years a ham" and there's no evidence of knowing
a forking thing about radio-electronics technology theory or
practice. Tsk, tsk, tsk. How would Attilla the Ham "know" if
something is "cut and paste" since he has no base of knowledge
to judge?

But, Attilla has all those nice certificates and has spent all that
money for those ready-made radios over "thirty years" (and
probably memorized lots of advertisements) so now he feels
entitled to attempt killing anyone who disagrees with him.
Weird science. :-)

> What I DO fault with Lennie is his assertions of "fact" when his own
>practical experience is "squat". Furthermore, Lennie continues to make
>patently false statements that are either easily disproved, or which he
>refuses to validate with any "evidence".

Poor baby. Too lazy to check out any of the references I posted
in here a long time ago...became all upset and outraged because
I made a mistake in sending him the wrong image file, had to make
a libelous character-assassination homepage on AOL to get even
(that lasted only two days, AOL got rid of it), then refused to even
look at the correct image sent several times in e-mail. Tsk, tsk.

If anyone wants a copy of the correct image, I will send one in
e-mail unless there are signs of just wanting something else to
fight about. :-) [it's just a scan of my first First Class
Radiotelephone (Commercial) license received in 1956, not a
real big thing like an amateur radio license]

> Tried to enter this forum with some aire of "knowledge", yet time after
>time you have been shown to be lacking in practical experience. You hid behind
>"Vshah101" all the while denying that my assertions of your inexperience and
>relative "novice" status were incorrect.

"...aire...?" :-)

"...hid...?" How? Internet screen names are just screen names.
Those aren't bona fide identifications of a person, Attilla.

"Denying your assertions" of anything is such a common practice
in here that it becomes 99% of what Attilla the Ham posts. :-)

> Thirty minutes of "detective" work outted KB1HMW and we found out that I
>was right all along.

Oh, wow! Ellery Queen should worry, Nero Wolfe should worry,
Mighty macho morseman Attilla the Ham is on the job!!! :-)

> You make assertions of "support" for Amateur Radio, then go into a CB
>radio nwsgroup and don't even take the time to create another AOL screen name
>in order to hide your tracks..Did you think you could make such outlandish and
>disparaging comments about Amateur Radio in that other forum and NO ONE >would
see...?!?!

"...nwsgroup...?" :-)

Oh, my, Attilla the Ham is waving his lil' sword of epithets again,
poising to strike! :-)

Tsk, tsk, tsk, capital crimes against the state! The "state" of
Attilla's vengeful imagination! :-)

> That's pretty arrogant, but I get the feeling that you are ALL ABOUT
being
>arrogant. Your

"Your " ? Couldn't finish? Had to wipe the spittle off the screen?
Had to take a tranquilizer to lower your blood pressure?

> Now you are again "hiding" something and I can only assume it's becausee
>you have yet another secret that you don't want exposed.

Oh, wow! CONSPIRACY TIME! Somebody is HIDING
something! Tsk, tsk, tsk.

Is that anything like a military medical discharge?

Is that anything like being in "seven hostile actions?"

> And to top it off, you have taken up the cause of "defending" yet another
>Amateur Radio basher who is not only NOT an Amateur, but who has been clearly
>shown to be a pathological liar.

Oooooo! The "medical professional" knows about "pathological
liars?" :-)

> Again..What does that say about you, Vipul?

I'd say Shah ought to be commended for standing up to Attilla
the Ham. It takes courage to go up against a mental basket
case like Attilla.

> I am not impressed. Not even amused. You are a parody of the court
>jester. Lennie is the original.

Get help, Steamy.

>assertions of yours? Who enforces these decisions?

Who IS your mental therapist? Drop that one and get a real
pshrink (one with plenty of nice certificates and qualification
papers hanging on the office walls to impress you).

"Ham traditions" are many and varied, chief among them is the
lore and mythos collection based on the 1920s and 1930s
good works issued by the very official BoDs of Newington.
You do not want to go there. It isn't the Corps.

> I've not once been to a "Wouff Hong" ceremony, ever been twitched by the
>readysnitch, nor am I on anyone's Honor Roll. So...How is it I was "allowed"

Now, now, Sgt Putz, don't get up the usual head of steam, you'll trip the safety valve. Again. :-)

What are these "legitimate awards and attributes not deserved?"

Failure to get down and give you twenty when you command?

Failure to obey your orders as a dill sergeant calling all recruits maggots or worse?

Failure to bow down to a blowhard cussing others who won't agree with Attilla the Ham's opinions?

Of course. All heed the barbarians issuing orders, even if they haven't the foggiest notion of reality or what they are doing. The barbarians only want to fight and kill those who displease them.

Tsk, tsk, tsk.

> The epitome of US amateur radio is working DX on HF with CW.

Despite your ardent insistence to the contrary, Len, there is no "one" mode of communication that epitomizes amateur radio. That's one of the things that makes it interesting.

While you might continue to insist that a REAL ham must worship at the altar of CW so that others in the hobby might consider them worthy (which I still don't get, since I've never heard anyone say such a thing on the air, but ONLY off the air), the facts are out there if you bother to listen... I turn the VFO knob up and down the bands and hear the dits and dahs of Morse, the bleep-bloops of RTTY and other digital modes, lots of tinny, untuned vocalizations of SSB (if I don't tune explicitly to every QSO I hear) plus many other weird noises that I cannot yet identify. Some ops may prefer one mode, and some may work multiple modes. The only thing that I think "epitomizes" amateur radio communications is that there IS no "one" way of communicating.

Those who insist that Morse is an onerous, backwater mode of communication and who don't want to be forced to learn it in order to upgrade will probably see their position vindicated soon by the powers that be. I don't care one way or the other about Morse testing going away, so long as it's not outlawed as a communication method (some people will always want to work it-- so what). That certainly won't happen. It will be interesting to see what happens when it's time to decide what privileges the new Techs will get on HF if E1 is done away with. However, I will certainly not be whining for one nanosecond if/when the new Techs get HF privileges without taking E1. I don't consider this anything to get my undies in a bunch over.

I think that the key to the future of AR does not reside in any one mode, but rather in the people who're attracted to it in the first place. With some exceptions (and there are always exceptions), the type of people that are attracted to this hobby are technically oriented and fascinated by technical/scientific stuff that the general public finds mostly undecipherable, and therefore many (if not most) of us who're initially interested are plenty capable of keeping this hobby alive via the sheer force of our curiosity and willingness to experiment. Such experiments have borne the fruits of advancement in RF communication. There are many new digital modes that've come out in the past couple of decades; there are many new, state-of-the-art, tiny, yet cheap commercial rigs, and there are many,

many design plans on the Internet for antennas, transceivers, etc. etc. But no matter how hard we yell to get the word out about AR, only some will be inclined, indeed able to hear-- and, more importantly, understand-- the value of this hobby.

If you've got an amateur radio license, use the privileges you have and have maximum fun with them. Don't let the jackass know-it-alls tell you what is fun. As a human being that has reached adulthood, YOU get to decide what is fun about your hobbies. I've got my HF privileges and rig set up now, but I still can't wait to get a 6 meter SSB transceiver and try out the "Magic Band" before the sunspots disappear. A new Tech licensee can do this from the get-go, no code required. Life's too short to not have as much fun as you can in your hobbies of choice.

Jackie

That minor detail aside so was my S-40B which today would actually
more useful than NTS has been for years. There isn't a single third
district regional NTS net on 80/75/40. Even Mae Burke gave up traffic
handling long ago. Traffic handling had a lotta good points and a
lotta hams benifitted from being involved in it. But those days are
long past. E-mail drove the final stake in it.

> So what's your solution? Where's the all-digital high speed UHF relay system
> that we were told was just around the corner, as soon as the code test went
> away?

The solutions are already on the Internet. Which is why it ain't gonna
happen on the ham bands.

> What are you talking about?

Now I gotta be *your* FD rules lawyer. The msg to the SCM is not the message handling bonus I'm talking about, look up the lousy ten points per ya get when ya waste yer time chasing down the bonus points per 7.3.6.

> Lessee, you need to bring two antennas, tripod mount and hardware, associated
> coax and other goodies. Plus set it up and take it down. Have fun!

No more hauling a truck load of FD crap for me. One way trip once except for the electronics and the toolbox. Which this time will weigh only around 35 pounds total and I'll have room left in the back seat. Radio, 'puter, P/S, keyer, mic and that's about it as far as the equipment goes. The tripod would be built there and would stay there along with the coax, all the other cables and the antennas and all the rest of the junque which is already stored there from last year. I even had the coax drop-shipped there. The monitor also stays there.

I expect to have everything set up and well tested long before FD weekend. I'm a helluva lot more interested working dx wih the antennas I have in mind than I have in my FD score and I hope to have plenty of that activity under my belt before FD. I'll do a cerimonial dipping of the antennas Friday nite to keep that detail kosher. I won't have anybody leaning on me about being home for dinner on Sunday so it might still be set up after the event in order to continue antenna experiments if I have that notion.

> 2980 points, 629 CW/11 phone QSOs, class 1B-1. No help at all, FD site 73 miles
> from home. No computer, not even a memory keyer. No usable trees, put up a 41

Ya know.... I have Echolink installed, but have only used it a little bit. Have Eqso and Ilink as well and same usage for the most part. Although I do see some usage in regards to keeping in contact with certain people in different areas that you normally would not have the ability to contact, I just don't get too enthused over it.

I have used the programs to contact one of our club members who is a snowbird, and goes to Arizona from Michigan and would not normally have the opportunity to speak to him until he gets back. Another good benefit I could see is to get to know some of the hams in the communities you may be traveling to in the future. For instance, I may be going to Maryland in about 3 months and may establish some friendships before I even get there.

Don't get me wrong. I am not really supporting or discouraging those programs. I guess I just don't get too enthused over them.

Line level in
Line level out
Microphone in
Headphone out

Those are the inputs/outputs on my soundcard..... dunno about "rear speakers" but used to have my DJ equipment connected to the computer a few years ago when it wasn't at a gig. Playing some of the shoot-em-up games sound cool as hell with 400-500watts audio output!

> legal limit when the rules allowed less than 1500W output??

Back when the legal limit was one kW *input* power, or roughly 700w
max output on a good day. Also back when there were gross violations
of that rule to the point that pairs of 4-1000As running 3-4kW input
were not uncommon. Hell, I built a few of those big two-holers myself
for a couple of the multi-multis and did the metalworking for others.
None of the numerous users of even outrageous illegal amps I know or
knew personally ever got spanked by the FCC for running those beasts.
The FCC did tap a few I never knew but the game went on undaunted.

Those monster RF decks were usually based on cheap military and
industrial surplus parts, sources which have long since dried up. So
now costs (and RFI) rule and amps almost all come outta the catalogs
today. Those costs just ain't worth the few dB "gain" ya get out of
monster amps vs. legal amps. If yer s9+20 with a single 3-500Z an
additional 3-500Z only gets ya an s9+23. Fuhgeddit, the smart guys
spend the money on their antennas instead.

> "regular" ham license? Not me.

You seem focused on the driver's license/learner's permit concept when neither compares to a ham license. There is no "regular" ham license - each have the same goals and intent - only method changes (that eliminates the driver's license concept). Since there is no regular ham license, there is also no suggestion that the goal of the lower licenses is to upgrade to it (and there goes the learner's permit concept).

Further, I find your premise somewhat disingenuous. If you truly feel the ultimate goal of the lower licenses is to upgrade to something else, why aren't you concerned about those who have not reached the Extra after many years. A quick search shows that many General licensees have been so for many years, yet I see nothing about this.

> Because the existing licensing structure is flawed,
> IMHO. (snip) Having this authority carries

> etc)
>
> 4. Neighborhood relations (TVI, etc)

But, again, you haven't show how the present license structure does not accomplish these things, or that the present licensees have not used their authority responsibly, or how your learner's permit concept would change

either. Without these, you're offering a solution where no problem has been shown.

The epitome of US amateur radio is working DX on HF with CW.

We've all been told by the Fearless Leaders of the Beeper
Brigade.

[or is that Feckless Leaders?]

Beep, beep.

"Tinkle?!?"

Gosh, community leader, I've been familiar with Type UHF connectors since Army days of 1952. Never heard one "tinkle" yet, not even at Christmas holiday time. Same with BNC, N, TNC, C, SMA, SMB, and some other types. No "tinkle." Maybe a slight "click," very soft. I've never found PL-259s to "hastily uncouple."

Please advise.

Thank you.

Fine.

>We do it because we like it and because we choose to do so.

Fine. But what are you complaining about? You have
everything you need. Or do you need more rather than morse?

Yes, that's it...CONTROL. Ultimate want. Make others obey
your wishes. MORE, not morse.

>You, as a non radio amateur, may do as you can.

Damn well believe it, senior.

>You remain a sidewalk superintendant.

Incorrect. I've walked on a sidewalk. I've been a superintendant.
I've never found a sidewalk that could be supervised. Do you
have supervisory sidewalks in the east?

Why are you talking about sidewalks, boss?

This is an amateur radio newsgroup full of the regular newsgroupies
with the PCTAs full of it.

Please keep to the program.

Amateur radio is NOT a military unit or auxilliary.

No soldier, sailor, or airman can "argue" the UCMJ.

The regulations for US amateur radio are US law set by
a federal agency. Those CAN be argued.

Why does the colonel wish to stop discussions about
US law?

>Lemme clue you in: You won't be getting that "Extra right out of the
>box" any time soon.

"Lemme clue YOU in," Herr Robust. That isn't the subject.

Poor baby. Doesn't get much. Thoughts of SEX permeate his
mighty macho morsemanship machinations in here.

Erection of a statue, dumass. Erection of a monument to your
mighty machismo of being able to fight, fight, fight when your
brain is dead, dead, dead. Long live the weird zombie.

> You are again redirected to the relationship between the Tennessee State
>Guard and the Tennessee State National Guard. Part of the TNSG's stated
>mission is to support Family Services and to man evacuated armories in the
>even of a Guard activation.

Wow! For that they need cammies and meetings every month
to discuss military matters using old US Army manuals?

Good grief, your distinctive unit insignianess, putting cammies on
state social workers would handle the family services duties.
No police forces in town? No civilian security guards? Those can
safeguard National Guard facilities if the REAL Guard is deployed.

It's fairly obvious that this TNSG thing is just another fraternal
order excuse for a bunch of macho military minded civilians to
have monthly fun playing sojer in da woods. All the trappings
of army post life are there for everyone to see.

> You attempt to define it to the least common denominator without having

>
> It still does not make you any more knowledgeable in Amateur Radio
>matters, nor does it "score" you any points for having tried to embellish
>your career by associating yuorself with KIA's before.

Nobody can possibly "score points" with you because you
haven't any idea of what the score is.

I was assigned to a signal battalion for 35 months and that
same battalion suffered 23 killed in action in the Korean
War. I honor their sacrifice, but you, you sorry excuse for
a former US military person, want to damn them and me
in order to win some sort of message point thing because
you can't admit you are wrong in anything.

As far as I'm concerned, the USMC kicked you out of the
corps for failing to recognize the "US" part. They would be
correct since you've managed to not only damn the US
Army and veterans thereof but also the US Navy for insulting
a long-time Chief who served honorably longer than you
claim to have been in the Marines.

> Exactly. But you DID find it necessary to recite it for the billionth
>time.

Not the "billionth," not even a millionth. I don't mind repeating
it for as long as it takes you to understand it. I am pessimistic
in regards to your understanding any of it...you are just an
amateur in everything you do, nursie.

> Next time try using all five fingers in a traditional military salute,
and
>without doing it so as to try and make YOU look like some kind of rear area
>war hero.

Next time I give YOU the upraised finger you sorry excuse for
an EX United States serviceman. No...I won't. You don't
deserve any kind of salute.

I've never claimed any "heroism" in any war. I served my country,
the United States of America, for eight years and received an
Honorable Discharge for that. I did it honoring those who served
before me in my unit, all signalmen, the United States Army, and
all the members of the US military.

YOU "honor" no one but yourself and some perverted imagination
and attempt to DISHONOR anyone who served his country
honorably if they don't agree with your lardship's opinions. Ptui.
All you get is a bit of excess spit you sorry excuse for an EX
marine.

> You were a radio clerk in a rear area radio station. Period.

I was an operating team leader for fixed station transmitter operations and maintenance and a supervisor of operations and maintenance of microwave radio relay equipment.

I did NO clerking.

The headquarters of an entire area command IS a "rear area" you anal-retentive claimant to "seven hostile actions." Do you think an area command is done from the front lines?!?

What about those "seven hostile actions?" Where? When? Source of information? Or are you going to lie about that as well?

In the immediate post Korean War period, HF radio was the prime communications medium for long-distances absent any ground wireline facilities. That applied to the Army, the Navy, the Air Force. It also applied to other nations' military and to all the commercial communications carriers. HF radio behaved the same for all users. It had since before WW2.

Those of us who were IN such long-distance HF radio operations learned how it was done, what to expect, the theory of it, and took the time to learn more. Clerks don't do that. Clerks handle administration matters. They don't operate radios, they don't maintain them.

Some HF radio bands are used by amateurs for avocational recreation. Radio amateurs do not have to operate-maintain their radios 24 hours a day, 7 days a week. Communications carriers must, for that is their business. The military must, for that is their mission in a period when thermonuclear war could begin in an hour or so.

HF radio works the same for anyone using that spectrum part. There is no difference between radio services and radio physics. Except in the perverted minds of some who have no real grasp of basic radio physics, shouting and waving their certificates "this is amateur radio!" No one can legislate fields and waves to make them do humans' bidding.

HF radio works the same way now as it did a half century ago or a century ago. Having a fancy certificate giving access to a limited spectrum space and limited mode selection (all optional) does not give more control over radio physics than anyone else. Training, knowledge, experience yields more insight into radio but myth, lore, and urban legends detract from true insight, a long tenure as an amateur or a fancy certificate saying someone is "extra" is no guarantee or qualification other than having a long tenure as an extra or having a certificate.

YOU, Sgt Putz, think you can "command" anyone by waving your magic certificate and hurling epithets. That does not

work in the real world. This is part of the real world. Your imagination is not the real world.

Temper fry

>
>Great! Enjoy!
>
>>Learning the code is a waste of time.
>>
>I have BSEEand MSEE and I say it's not a waste of time at all.

You can have a PhD if you wanted...all you have to do is some
post-graduate work. Why don't you? That would let you speak
with AUTHORITY on a non-academic avocational pursuit that
is burdened with federal regulations because of radio physics.

The more certificates you have, the more you can mention
them and present an image of AUTHORITY on morsemanship.

>>Having the code license actually works against me, since it shows one wasted
>>time learning code.
>
>You have spent far more time posting here than it would take most people to
>learn enough code to pass the 5 wpm test.

"Most people?!?" There's a Poll for that, too?!?

There's approximately 300 million people in the USA. How many
are "most people" in approximate numbers? Two? Three? A

four-year-old?

>How you spend your time is up to you, but the way you write says that
>learning code is a waste of time for everyone, not just for you.

Rev. Jimmie, the way you write is that anything, and I say
ANYTHING against morse code is an abomination before
the lord. Chill down, boy, this ain't the church.

>>This takes away from other (legitimate) skills.
>
>Is Morse code not a "legitimate" skill for a ham to have?

The epitome of US hamming is working DX on HF with CW.

But the FCC does not mandate CW-only use or require it
to be used over and above any other allocated mode.
No code test Technicians are given the option to use morse
code on their allocated bands.

Wow! Think about such a heresy! No code Techs working
CW and never ever taking any code test! Why that looks
like a fabulous subject for another Sermon on the Antenna
Mount!

>>I agree
>>with that opinion. Also I just don't find code fun and I resent the higher
>>license class being tied to the code.
>
>Nothing anybody can do about it until the treaty changes.

Don't fight city hall? Don't even TALK about it?

Tsk, tsk, tsk, if all that talk about the displeasure of morse
is grating on your superior-grade ears, your lordship, then
have them summarily eliminated.

>Did you get to pick and choose the courses you wanted for the BSEE, and reject
>any that didn't interest you? Or did you have to learn some stuff that was of
>no interest but was required for the degree?

Oh, wow, RETRO talk! The license test is a Degree Final!

Here's an amazing clue-in, Rev. Jimmie: There aren't any
federal regulations regarding the "courses for a BSEE" or
any other degree. No regulations mean no legislative stuff
to argue about. Hello? Are you beginning to see any light
yet?

>(I'm NOT saying a ham license is an academic certificate, just that one
>doesn;t get to pick and choose.)

You're shot down again, ace. Ever hear of "electives?" Those
are recognized by all the major colleges and universities.

Yes, you ARE all but shouting out loud that a ham license test
is just like a college degree final test. Everyone hears you
loud and clear..."599" in appropriate "reporting." :-)

>Could have been a candid picture.

Allan Funt you ain't.

>>The homebrewing photo is placed to show the club likes to Homebrew. However,
>>noone in the club likes to homebrew.
>
>How do you know?

How do YOU know? Do you now claim prescience in addition to
reading the minds of the FCC staff?!?!?

>>I see a contradiction.
>
>Yeah, me too.

The rest of us see just another irritated BDOF, Rev. Jimmie.

The epitome of US hamming is working DX on HF with CW.

I absolutely agree, Jim. But this is something Clinton and his supporters would rather we not focus on - the bad boy screwing around image is better than the liar image.

Furthermore, I was never comfortable with the fact that Clinton was having a sexual relationship with a subordinate on the job - something that would, for many reasons, almost certainly get a regular employee of the government fired instantly.

And, to prevent this thread from getting too far out, I'll end my comments about that with this message.

How many services are there at two years per look-see?

A mandate to review is not a mandate to change.

I assume that the all the FCC has to do to remain kosher is to log the
review and move on if that's what they choose to do.

Actually, it's probably not a heck of a lot of editing work to simply eliminate
all references to Element 1 from Part 97. Not a "full rewrite" by any stretch
of the imagination.
>
>> >Someone needs
>> >to think of a 'simple' way to phase out the closed licence classes of

>>
>> Why? FCC sees no problem with the way things are.
>
>And, in reality, the Novice bands are available to all Tech+, Gen, Advanced
>and Extra anyway.

Yes, but the power level in those subbands is limited for all license classes.
And there are some folks who favor "refarming" the Novice subbands as more
'phone space.
>
>Likewise, even if the Advanced hams all vaporized tomorrow, the "advanced

>> the
>> rules a little shorter.
>>
>> Neither idea is going to get much support.
>
>Nor is there any reason for the FCC to do anything anyway.

Right! The rules are on the books already. No new Advanceds being issued, so no admin work there.

>The renewal
>process
>is pretty much automated (my renewal was done via ARRL and it was processed
>in less than 10 days earlier this month. Now I'm just waiting for the hard
>copy to
>show up in the mail which is probably computer generated and mailed.

Been that way quite a while. Last time I did a modification (late '99) I just downloaded the PDF for Form 605, printed one, filled it out, sent it to the FCC. Computer printed license showed up a few weeks later.

If they are really "old" techs (or Tech+), they have code credit for
5 wpm and the upgrade to General shouldn't be much of a hassle
(particularly if they are technically astute enough to do the sorts of
things that you list) ... I would suspect than many have already done
the upgrade ...

Bill Cross? Makes me think of my old boss of many years, a very quiet, but highly professional and extremely intelligent engineer who rarely smiled, just went about his business in a highly professional manner. He now holds a professorship in engineering at a prestigious university. He was also a ham radio operator and enjoyed attending hamfests. I had the opportunity of attending a hamfest with him one time where Bill Cross was a speaker. Upon seeing Cross, my normally very serious boss broke into uncontrollable belly laughs, whooping his knees, and bringing the place down with loud laughter. When he finally regained his composure, I asked him what was so funny. All he would say is that the Cross always sent him into peels of laughter and he would tell me some day why. Hmmmm.

That's not the 100 points I'm talkin' about at all.

You get 100 points for originating a message to the SM during the FD
period, reporting your FD activity. Write it up ahead of time, pass it
on a section net, 15 minutes tops. 100 more quickie bonus points.

The ten messages at ten points each I don't bother with.
>

> > foot mast single handed. Gas engine generator for power.
>
> Should have gotten ya the Field Day version of the Darwin Award.

I'm still here.

btw, back then you could get 100 bonus points by making at least 10
VHF/UHF QSOs (FM simplex OK, but no repeaters). The 11 phone QSOs were
on FM simplex from the HW-2036 and a homebrew GP on one of the end
support masts.

>Please provide a sentence where "radio art" is used to mean non-technical
>achievement, from an unbiased source

Vippy, this is an Amateur Radio NG, occupied by Radio Amateurs.

Your assertion is based upon wording of Amateur Radio related regulations
in the Code of Federal Regulations.

Any "reference" I provide is going to be ABOUT Amateurs from Amateur Radio
related sources.

We are discussing (on occassion, anyway...) AMATEUR PRACTICE...Not
commercial, military or any other form of excitation of the ether.

Therefore any reference to the use of the term "radio art" is going to be
as it is applied to Amateur Radio...NOT how the IEEE or any other source refers
to it.

It is impossible to provide a cite where it is NOT related to Amateur
Radio.

And what "hype" are you refering to, Vippy?

>I can learn code. I don't find Morse code fun or relevant to the higher
>license
>class.

It's not what YOU find relevent, Vippy. It's what the FCC and Congress
find relevent.

As of today, Fevruary 18th 2003, a Morse Code test IS relevent to the
operation of an Amateur Radio station authorized to operate below 30 mHz.

That's the law.

That you don't consider the benefits of what you would obtain in return
for the effort to learn the code "worth it" is YOUR opinion, suited to YOUR
lifestyle and choices.

Your demeaning and denigrating remarks about those who DO expend the
effort are spiteful and selfish.

Period.

In what venue? In what periodicals, manuals or other "colloquial" media?

>You've flipped out, lost it, switched off, drifted off frequency
> a long time ago and live in a world of fantasy, certificatism,
> and uniforms with distinctive unit insignia.

Yep...I do.

I live in a world where I am proud to be serving in some capacity. My "service" has, on more than one occassion, meant that someone went home alive that might not have otherwise had that option had I and other like-minded volunteers not been there.

Uniforms come in all shapes, sizes and origins. Some were uniforms of military origin. Others were from EMS service and no connection to the Armed Forces at all.

That you disdain uniforms is obvious. That you try and discredit the people who wear them for your own selfish reasons is ugly.

You should try volunteering somewhere, Lennie. It's good to get out and be with people who enjoy helping other people.

I know it will be a new experience for you, but try it anyway.

You're a putz.

Steve

With all due respect :) In actuality what anyone finds relevant *does*
matter, if they are a voting citizen. It is the public, after all, that
supposedly has influence on the decisions that ultimately reach the
regulatory and enforcement branches of our government. What the FCC and
Congress find relevant is, hopefully, what the majority of the public finds
relevant--the majority that is involved, that is.

Those were not aimed at anyone BUT you, Your Putziness...Or is it Your
Creepiness? Still too early in the day to decide.

>[Steamy don' really wanna
> go there again, he gonna bleed and bleed again if he do...]

Lennie! Making THREATS...?!?! Oooooh! I am SOOOOOOO scared!

Not.

>THE FIRST EVIDENCE OF MOONBOUNCE CAME FROM US
> ARMY SIGNAL CORPS EXPERIMENTATION IN PROJECT DIANA.

Shouting will not make you any more "right", Lennie.

>The subject was MOONBOUNCE...using the moon as a reflector.
> Not some mythical "long delay echoes" said to be observed by a
> few and verified by no one. PROJECT DIANA. Hello? 1946.

Hello yourself. Still wrong. Albeit not called "moonbounce" then the
phenomena was descibed in both "Radio" magazine and "QST" in the 20's and 30's.

>Definitive evidence, witnesses from the press, echo waveform
> photographs, verification by others doing the same thing
> afterwards. It was in Real radio literature and recognized as first
> by the rest of the Real radio world, not by some UFOnaut.

PRACTICAL Moonbounce was explored by Project Diana. That a website YOU
prefer says "this is the definitive word on the subject" does not make it so.

>I guess that I have to use all capitals in order to make things
> clear to your few neurons, Attilla

Nope. You use all capitals because you're the bully who has to yell it
out louder regardless of how wrong he may be.

>Go reasearch radiosondes and their use, their history,
> Attilla. Try NOAA "assets" on radiosondes before you

> make yourself another ass again.

I don't have to go anywhere, Lennie, and I am not the one who has a perception problem.

Private resources seeking to be NASA and ESA alternatives is old news.

>If you weren't known as a total ignorant slut about radio
> technology behind the front panels you could learn about
> pencil triodes by the tens of thousands installed in little

> Regulations) for a non-amateur-radio-related subject and
> for incessant arguing in here? You lose either way.

More arrogant refusal to specify for what periods of time the awards were earned...Which only leads me to beleive this is yet another Leonard H. Anderson claim to an award won without his input.

I read fine, Lennie. As for the adjective, I have asked you three different ways to tell us from what day to what day the PUC's to which you lay claim were awarded.

For those who have never served in the Armed Forces, unit citaions are awarded for one of two events...Either a specific event of notable accomplishment, or a period of time over which noteworthy and exemplary service was performed.

Lennie is once again dodging the question because he knows that if he reveals the periods over which the PUC's for his unit were awarded, we will know that he was NOT in the unit for the periods cited.

In other words, he did not contribute to the character of the service for which the award was made...He did not contribute...(as if we didn't already know...)

>Sgt Putz, aka Attilla the Ham, is suffering PMS (Powerful Marine

> 73 de Jim, N2EY

Me too, Jim:

My very first experience with 2-way radio was a "CB" walkie-talkie that my best bud and I used to communicate accross the vast expanse that was the vacant lot between our houses. I put CB in quotation marks because although they were advertised as CB h/t's and operated on CB frequencies, they wer Part 15 devices @ 100mW rather than Part 95 @ 4W.

They were awfully fun though and had the 'International Morse Code' placarded on the front of the rig with a bright orange button labeled 'Morse Code Key.' After sending some very slow code back and forth for awhile, we wanted a little more range. (Here is where I admit my very first violation of a FCC rule.) So I read up a little on outdoor antennas and decided that a dipole would be best on a 13-yr. old's lawn-cutting/snow-shoveling earnings. Dad provided supervised access to his soldering iron and the h/t's telescoping whip was replaced by RG-58 coax feeding a half-wave dipole. My friend's whip was replaced by a commercial quarter-wave ground plane. Ah, those were the days!

I'd be remiss if I didn't mention the trip to the local CB/ham shop to buy the necessary materials. When the owner asked me about my planned "installation" and how much I had to spend, Mike (WB2 something or other) cheerfully supplied me with a Budwig-style center insulator, two dogbone end insulators, the required 14-gauge stranded copper antenna wire, 18 ft. of RG-58 coax, and a set of crystals for ch. 20, the local rag-chew freq. "Yep,

fourteen bucks'll just about cover that." The ch. 20 crystals were $8.99
alone. That was my first exposure to the amicable spirit of radio. :-D

>Erection of a statue, dumass

Temper fry, Your Putziness...Temper fry.

>Wow! For that they need cammies and meetings every month
> to discuss military matters using old US Army manuals?

No...They discuss military matters using CURRENT US Army manuals...The same one's that pertain to the active Army, the Reserves AND the National Guard.

>Good grief, your distinctive unit insignianess, putting cammies on
> state social workers would handle the family services duties.

You mean the social workers who are already so under staffed that kids are lost for YEARS in the social services programs?

You mean the social workers who already have to just rubber stamp cases bcasue they can't be in 20 places at once?

Yep...those are the same social workers I'd want taking care of MY family if I was overseas...Uh huh.

>No police forces in town? No civilian security guards? Those can
> safeguard National Guard facilities if the REAL Guard is deployed.

Geeeeee.....Guess all those "human interest" stories on CNN, MSNBC and other news outlets about how understaffed many police departments are because Guard units are getting called up and drawing away local police assets hasn't played in SoCal, huh...?!?!

>It's fairly obvious that this TNSG thing is just another fraternal
> order excuse for a bunch of macho military minded civilians to
> have monthly fun playing sojer in da woods. All the trappings
> of army post life are there for everyone to see.

More insults of veterans and veterans who volunteer.

Scum from the scumbag. What did I expect from a coward who makes his "fame" from hiding behind Army KIA's for newsgroup glory?

>Oh, pizza off, you little thin-skinned excuse..."thier" included.

Learn this in night school, did ya? I am impressed.

>Nobody can possibly "score points" with you because you
> haven't any idea of what the score is.

Sure I do. Been playing THIS game a lot longer than you have, Your
Putziness!

>I honor their sacrifice, but you, you sorry excuse for
> a former US military person, want to damn them and me
> in order to win some sort of message point thing because
> you can't admit you are wrong in anything.

I am not the one dishonoring those men, LennieH. You are. Every time you
recount their deaths so taht you can hide behind them.

I "damn" you for being a coward and a liar. You have yet to prove
otherwise. The above quoted passage yet another attempt to hide your own
misdeeds.

I DARE you to quote ONE sentence where I said ONE disrespectful thing
about those Men, Lennie. I am only sorry that a disgusting coward like you can
hide behind "Freedom of Speech" when you invoke their memory for your own gain.

>As far as I'm concerned, the USMC kicked you out of the
> corps for failing to recognize the "US" part. They would be
> correct since you've managed to not only damn the US
> Army and veterans thereo...SNIP)

I have not damend the Army, Lennie, and you are again tasked to provide
the quote wherein you say I did.

And I have "damned" only ONE veteran. That would be you. I still call
you a liar and a coward. That's MY right under the Freedom of Speech".

>Not the "billionth," not even a millionth. I don't mind repeating
> it for as long as it takes you to understand it.

I understand it fine.

You were in the Army.

You were voluntarily enlisted, not conscripted.

You were assigned to a rear area radio relay station in Japan, three years
AFTER that unit had been in combat.

You frequently invoke the memory of members of that unit who were KIA
during the active phase of the Korean Conflict, the sole purpose of which was
to embellish your own "record".

>I am pessimistic
> in regards to your understanding any of it...you are just an
> amateur in everything you do, nursie.

"Nursie" is with a capital "N", Lennie.

>I've never claimed any "heroism" in any war.

Sure you have. Everytime you invoke the memory of their deaths and then try to hide behind it, Lennie.

>I served my country,
> the United States of America, for eight years and received an
> Honorable Discharge for that.

According to what you have posted here, you only served for THREE years. The rest was inactive reserve. You were back home, working a civilian job, and not on any federal payroll. (at least not as a member of the Armed Forces).

What's the truth?

>I did it honoring those who served
> before me in my unit, all signalmen, the United States Army, and
> all the members of the US military.

You maybe did it then. You certainly don't do it now. In all of the Veteran's Day posts made by me and others in this forum you have not once acknowledged any of them. Nor have you ever acknowledged any of the Memorial Day posts made by me and other veterans in this forum.

>YOU "honor" no one but yourself and some perverted imagination
> and attempt to DISHONOR anyone who served his country
> honorably if they don't agree with your lardship's opinions. Ptui.

Not "anyone", Lennie. Just you. And only because of your cowardly and spiteful conduct in this forum, especially towards your fellow vets.

>In the immediate post Korean War period..(SNIP)

YadaYadaYada.

Still not germane. Same old stuff as yesterday.

>Temper fry

I am not the one who's got an anger problem, Lennie.

Ya Putz.

Maybe I didn't make it clear. I am proposing a new license structure
where there are only two classes: learner's and regular.

> Since there is no regular
> ham license, there is also no suggestion that the goal of the lower
> licenses is to upgrade to it (and there goes the learner's permit
> concept).

See the answer above.

I never said the present license structure does not accomplish these
things. I said the present license structure is overly complex and
focuses on the wrong things for beginners. We have too many hams now
with General and above who exhibit poor understanding of the basics of
operating. I'd like to see that changed. The other, more technical
items can come later.

"Memorandum Report and Order" - thanks, Phil, for the proper name of
what I've been referring to by other names.

I took a quick look at Part 97, and it seems to me that all that's
required to remove Element 1 would be revision of 97.501, 97.503,
97.505, 97.507 and 97.509. Most of the revision consists of simple
deletions, with a few rewordings and some renaming.

I'm pretty sure my good friend K2UNK has all the new wording ready to
go, which will save the Commission a little time.

Since I'm the one who wrote the phrase "Wide ranging support in the
amateur radio community" in the first place, let me clarify what it
was intended to mean.

I intended 'amateur radio community' to mean all parties interested in
the good of the amateur radio service. That includes hams of all
license classes, people in the process of getting a ham license,
people thinking about getting a ham license, amateur radio
organizations ranging from NCI and ARRL to your local radio club,
amateur radio publishers and equipment manufacturers, regulatory
agencies like the FCC, and probably some others I haven't thought of
yet. Not just licensed hams.
>
> But then again you are not a licensee nor are you within the amateur
> radio community.
>
Anybody can comment, propose rule changes, etc., not just hams.
However, it is a mystery why an individual who has never held an
amateur license and obviously has little interest in getting one is so
interested in changing the rules.

C'mon, Dave, you know that's not going to happen. Proof is not one of
Len's methods. Ask the hypothetical first grade teacher whose reply
Len would ignore anyway if it did not match his expectation.

3. Claimed that I described Amazon.com as "bankrupt" when no such
claim was ever made by me. What I actually wrote was that Amazon.com
was not making a profit, in direct opposition to Len's claim that
Amazon was a "profitable" company. I backed it up by posting links to
Amazon's financials of the time.
But Len keeps quoting me as saying Amazon was/is "bankrupt". Just
another of his untruths.

>
> Let's ask ourselves about the reason for these statements of yours. Do

In other words, Len cannot reply to my posted facts, so he does the behavior described in my quote.
>
Here, I'll answer those:

> I've asked before but you didn't respond, what is "overly proud"?

Any mention of any accomplishment by those who disagree with Len.

> Why
> does it bother you that Jim chooses not to tell you where he is
> employed?

Because it removes a whole line of possible insults from Len's NG ammo case.

> Why the silly names like "Reverend Jimmie"?

Avoids addressing the actual issue. Also, an attempt to get me to reply in kind.

> Why the comments about "undisclosed location"?

Because keeping the location undisclosed removes a whole line of possible insults from Len's NG ammo case.

> What are we to make of your comment about
> certificates and chassis punches?

Len wants to minimize the fact that I have electrical engineering degrees from major universities (Penn and Drexel, right here in Philly) and that I have designed and built much of my own ham equipment in my 35 years as a ham. Nowhere have I claimed to have designed and built all of it. That's just another of Len's misquotes.

> Why would you refer to Jim as a
> brain-dead old fart?

Direct insult in an attempt to get me to reply in kind.

> It looks as if what you have done is simply
> provide proof of his statement about your behavior.

Len does that with almost every post.

Does anybody think that posting info about my employment would result in anything from Len except more insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior? No matter what the job actually is?

Didn't think so.

When the inspector is standing outside the door, the name of the
game is to get the "leener" out of sight as fast as possible - as a
cable is removed and allowed to flop vertically, the "tinkle" sound
id heard.

You gotta be there to recognize it. Try it - back off the threaded
sleeve and let the cable flop free. Works every time with the
cheapie PL-259 knock-off connectors found in CB installations where
the sleeve backs off the connector body with only a few turns.

Why should radio amateurs go along with what you want for amateur radio,
Leonard? You aren't involved at all. Could it be CONTROL? Why'd you
snip the relevant quote from you? It wasn't about morse testing. It
was about morse USE.

> >You, as a non radio amateur, may do as you can.
>
> Damn well believe it, senior.

I do believe it. That is why I wrote it. We'll operate on HF using
which ever mode strikes our fancy. You'll sit here and continue to
snipe. It is all you have.

> >You remain a sidewalk superintendant.
>
> Incorrect. I've walked on a sidewalk. I've been a superintendant.
> I've never found a sidewalk that could be supervised. Do you
> have supervisory sidewalks in the east?

No, we just have folks who know what the term means. It suits you.
You're simply an amateur radio bystander, an onlooker with an attitude.
You're probably still dumbfounded that hams don't welcome you with open
arms.

> Why are you talking about sidewalks, boss?
>
> This is an amateur radio newsgroup full of the regular newsgroupies
> with the PCTAs full of it.

Sure is an amateur radio newsgroup, mostly filled with radio amateurs. There are some long time hams, there are a few new hams. Then there is the non-ham who knows what is best for amateur radio, knows that a minimum age for radio amateurs should be established, plunks rocks at the ARRL. That windy fellow has contemplated entering amateur radio for several decades. It could only be funnier if you were a fellow thinking about getting into a swimming pool for that long.

> Please keep to the program.

I've been with the program for nearly forty years. You're still making up your mind.

Good. I didn't write that it was. I asked if you followed orders when
you were a little soldier? After all, you brought up the "good little
soldier" stuff. It wasn't written by you as a compliment to someone who
set out to meet the requirements for upgrading his amateur license.

[auxiliary is still spelled with one "L"]

> No soldier, sailor, or airman can "argue" the UCMJ.

No one can obtain an HF access as a radio amateur without passing the
little five word per minute morse exam.

> The regulations for US amateur radio are US law set by
> a federal agency. Those CAN be argued.

You've "argued". The current regs set a 5 wpm code test for HF access.

> Why does the colonel wish to stop discussions about
> US law?

No discussions have been stopped. I've not attempted to stop such
discussions, Foghorn.

> >Lemme clue you in: You won't be getting that "Extra right out of the
> >box" any time soon.
>
> "Lemme clue YOU in," Herr Robust. That isn't the subject.

It is certainly a subject. You told us you were going for it. THAT was a subject. You haven't done so. THAT was a subject. You've told us that you were only here for civil debate on removal of morse code testing. THAT was a subject. That you have not limited yourself to that discussion and that you haven't been civil--THAT has been a subject.

> >There is a *requirement* of 5 wpm morse for HF
> >access in ham radio.
>
> There is a REGULATION about it, dumass. See appropriate

That's right, Windy. The regulation sets the requirement. What is it about that you don't understand?

> >The current five word per minute test is less than what would be
> >considered "marginally proficient".
>
> No problem, Herr Robust, your orders and commands are
> marginally nonsense items better left to dialogue in the TV

> Klemperer character, a Klink without a clink.
>
> Gutt nacht, Herr Oberst. Gruss gott.

About the only parts of N2EY's profile of your behavior missing in this one are the excessive emoticons and references to my former job. Have you yet noticed that the only times you get the "Foghorn" and "Windy" treatment is when you start with the cutesy names? If you like, I can repost the urls so you can re-familiarize yourself with the Foghorn Lenhorn wave file and jpeg. Now be a good little Foghorn Lenhorn and play nicely with others.

I agree 100%.

The way I see it, about the only way we'd get a big change in Part 97
is to come up with a comprehensive proposal that makes FCC's life a
lot easier, AND which has demonstrated widespread support in the
amateur community. IOW, a complete package that the FCC can just sign
off and be done with.

I place the chances of such a package being created and the necessary
support being shown somewhere between very slim and none.
>
> You didn't think that the FCC wanted to do that exercise on its
> own, did you?
>
I dunno, Phil. I do know that FCC isn't staying up nights worried
about the future of the ARS, or how to fine-tune the rules to improve
it.

Way back in 1997, somebody posted here that FCC was going to simplify
the ARS rules in a big way. Three classes of license, 5 wpm code, no
more waivers, massive simplification across the board. They said it
was a "done deal" and we'd just have to get used to it. I thought the
poster was way off target and said so. 'Specially after the ARRL
proposal and the 4-class NPRM

But it turned out that the R&O more closely resembled that old post
than any proposal which came after.

George, do you have a CB radio, or do you just use your amateur
radio on the citizens band frequencies?

I think the current Technician license is a bizarre abstraction of
what a learners permit should be, what an entry level license should
be, and is wholly unsuitable in priveleges granted, i.e., dangerous
levels of rf radiation, repeater trustee, etc. Those are not entry
level items.

Don't forget that the Technician license was once the door prize for
those who passed the General written exam, without passing the 13 WPM
code exam. The General license is no beginners license, and neither
is the Technician, no matter what has been done to it in the
intervening years.

>Flight suits, one-piece coveralls, commonly called "poopie-suits"
> by those who wear them.

By the way, Lennie...Found your source of "poopie-suit" reference.

"Poopie suit" is NOT the one piece flight suit (CWU27/P) as you claim, but was a 1950's era immersion suit used in the Korean Conflict.

Figgers...Why am I not surprised that your reference was over 50 years old?

The only other "colloquial" use of that term is by the United States Navy Submarine Service in reference to thier blue and purple jumpers worn while submerged.

Close, Lennie. A 1950's item and stuff used by submariners...Guess you picked the use up in a Clancy or Koontz novel.

Same old Putz, Lennie. I can always count on you!

According to Mark Furman on Fox News, you need a seperate search warrant for the new truck. He felt the search warrant on the new truck was MORE important than the house.

To go before a judge, you have to have some kind of evidence, observance of potential crime, to cause a search warrant to be issued on the new truck.

Mark surmized that the detectives must have, under surveilance, seen something, (suspicious?) regarding that truck, to warrant, a search warrant of a truck that Scott has only had for just a few weeks.

What do you think about this:

If ONLY it were that simple... that was the first thing I checked... then, when I discovered that I had the soundcard configured correctly, I had a major go-around with Windows Sound Recorder before I discovered that the mic input was shot. I'm picking up the new soundcard this weekend. Apparently this was not uncommon in the soundcards that they supplied with my computer. Easy fix.

Or an employee of many private companies as well.

I was willing to give Clinton the benefit of the doubt about the whole mess
until the lying was exposed. (After all, he's hardly the first politician to
fool around. That's not an excuse, just reality). But the fact that he looked
the camera in the eye and lied about it was simply too much.

The odd part is that if he'd just come out and said "Yeah, we did, big deal,
get over it", the whole thing might have blown over in two weeks.

>effect on any of that.

Actually, I think it does have an effect. The more license classes there are,
the more admin work FCC has to do. Even though the paperwork is highly
automated, it still requires some human intervention, which costs resources.

For example, when the license term was doubled from 5 years to 10 years in
1984, one of the main benefits to the FCC was an admin work savings estimated
at 1000 person-hours/year. Yes, that's maybe one person's job for six months,
but it was worth it to FCC to make the change.

Under the old system, a new ham who went from no license to Extra could "cost"
FCC as many as 5 interactions (new license, upgrade to Tech Plus, upgrade to
General, upgrade to Advanced, upgrade to Extra) even if no tests were failed
and no CSCEs issued. Under the current system, the total is reduced to 3
interactions (new license, upgrade to General, upgrade to Extra). Multiply
that by the number of new hams and upgrades and the saving is considerable.

Yessiree...and in today's world of budget cut-budget cut-budget cut, it's got to be at least an attractive thought in the minds of Congress and maybe even the FCC. I know if I was the head of the organization and I was told to look for deep cuts, I'd be considering what could be done in the world of radio services.

My hard copy arrived today. I mailed the ARRL renewal formback
to ARRL about 2/5/03. Not bad, total elapsed time from my
mailing to hardcopy was only 13 days.

Cheers,

Just as the "fight" between the North and the South, to see who would "win the battle" of becoming the last living Civil War Veteran, became a national obsession in the last century... could the ongoing battle between Advanced and Novices to see who will be the last surviving member of those two classes breath exciting new life into the hobby?

With the Advanced presently holding about an 85,000 to 36,000 advantage, and with the Novice numbers dropping more precipitously, at first glance one would think that the Advanced folks are a "shoe-in".

But - the same thing could be said of the North/South numbers around the beginning of the last century. The North held a HUGE advantage in initial numbers; but, the South had an ace up its sleeve - there were loads of barefoot 13-year-old Southerners manning the trenches along with the grey-bearded warriors at Richmond in the waning days of the war. Yes - it is my contention that the Novice ranks also contain some of these "aces" as well... barefoot 13-year-old Puerto Rican Novices. I predict that sometime around the year 2040, there will be more Novices than Advanced... with about 2,000 left from each category... then, around the year 2050, with only about 500 left in each bracket, things will start to get REALLY interesting... The suspense is killing me - I can HARDLY WAIT.

Beyond what is required by the rules, there are no "basics of operating."
Most are simply conventions which evolve with time and technology.
Therefore, enforcing and/or teaching convention is not exactly high on the
FCC's agenda.

I don't know Paul. I do remember an Aaron who posted here some time back, but don't remember much about him (only read his messages in passing).

Anyway, I'm not exactly just now settling in to this newsgroup. While I haven't been very active over the last year or so, I've been posting in this newsgroup under various email addresses (stewart@sc.rr.com, stewart@sccoast.net, stewartx@sccoast.net, stewart@amouse.net, and so on) for perhaps ten years. However, whatever the email address, I've always used my real name.

I've never "trolled around in rec.radio.cb." Yes, I've posted messages there. I have a CB in my truck, so I've posted in that newsgroup. I also have a scanner and shortwave and have posted to those newsgroups. I also have a Macintosh, so I've posted in the Mac newsgroups. I've owned PCs, so I've posted in the PC/Windows newsgroups. I own a boat, so I've posted to the boating newsgroups. In fact, I've posted to a large number of newsgroups over the years. However, I'll repeat again, I've never posted with anything other than my own name. And, unless you're one of those people who think anything posted that disagrees with your own position is a troll, I don't troll. And that is the end of my comments about this nonsense.

Awww C'mon Jim, give me a freakin' break, name one politician that has not lied! In the camera, or in person, every politician has done that.

Waaaa, Waaaa he lied. Big deal. Every single person I know and have ever met or will ever meet has told a lie (or many).

I am not downplaying the sex issue nor am I am fan of the democrats or of Billybob Clinton, but that statement you made below could not stand on its own.

2454. Ahoy! This ham, who befriended us in India, needs CQ, QST & 73s (long)

Newsgroup: rec.radio.amateur.policy
Date: 2003-02-19 10:04:49 UTC
From: bigfatcircle@yahoo.com
Message-ID: <7f5bef7c.0302190204.1fdc36e9@posting.google.com>
Source record: 61534

Ahoy Friends, Boaters and Hams...

My name is Cap'n Fatty Goodlander. I'm a marine journalist who is sailing around the world on a 38 foot sloop named Wild Card. (See www.cruisingguides.com/fattygoodlander/fatfacts.htm or punch in my name on Amazon.com or do a 'google' internet search of both web pages AND 'groups' for more information on me).

In any event, a lot of people have been very nice to us along the way----but none nicer than an Indian ham (VU2ITI) named T.K. Mani who lives in Cochin, India.

He helped us out tremendously by fixing our SSB radio aboard Wild Card----and refused all payment.

Once we started hanging out with him we discovered what a wonderful guy he truly is. (See story which follows).

...could you do me a small favor for a very good cause?

Mani and his entire radio club are in need of any-and-all-types of amateur radio magazines... like CQ, QST, or 73.

Is there is any chance that you could collect some of these magazines... or contact some local amateur radio group to do so... and mail them to the address which follows?

...I know it would take a little time and some money----but, believe me, it would be greatly appreciated by the amateurs of India.

It doesn't matter how old or ripped up the mags are... they'll read whatever you send them to tatters!

Thanks so much.

Here's the address:

T.K. Mani
Department of Electronics
Cochin University of Science and Technology
THRIKKAKARA Kochi 682022
Kerala, India

Thanks again.

Cap'n Fatty Goodlander, author of Chasing the Horizon
Sailing Yacht WILD CARD
Cochin, India

Indian Ocean
Earth

On Radios, Indian Friends and Electronic Heros
Copyright 2003 by Cap'n Fatty Goodlander

In the last few years, we've sailed to dozens of counties, many of which are reputed to be the friendliest in the world. Nowhere, however, have we made more wonderful friends quicker than in India.

Take electronic guru and university professor T. K. Mani as example: once he heard there was a visiting American yacht '...stranded without a radio,' he dropped everything and rushed down to the Cochin harbor to help.

My wife Carolyn and I happened to be away traveling inland at the time, so he kept returning day after day until he found us aboard----despite the hour-long, heavy-traffic commute.

I was, frankly, somewhat suspicious of him at first. Without even looking at the radio, he assured us he could fix it. His only question was, "Do you need it back tomorrow, or can I have a couple of days?"

To dampen his optimism, I warned him that the radio had not work since we'd been hit by lightening and that I had no idea what was wrong with it, no schematic diagram, no parts list, etc.

He just shrugged.

I didn't know it at the time, but T.K. Mani had every right to be confident.

About thirty years ago, when he was a teenager, he saw a newspaper ad for a small radio receiver for 10 rupees, about twenty cents American. He wanted that radio so bad he could taste it, and began bugging his hardworking-but-nearly-penniless father day after day. His family was VERY poor and often hungry----and his father told him repeatedly that it was too expensive. But Mani wanted it, wanted it, wanted it.... so badly that his father ultimately relented and gave Mani the 10 rupees.

Mani sent away for the radio, and waited. And waited. And is still waiting. "It was a rip off... a scam," he told me. "I never got the radio. I was furious. My father said, 'I told you so..!'"

Mani could not believe it. His chance to own a radio and to hear beyond the front door of his tiny rural shack... was gone forever.

Or was it?

Mani decided to build his own radio. He collected old television sets and gutted them for parts. He went to the library and read dozens of books on amateur radio. He visited every radio repair shop within hiking distance of his house----and silently watched/questioned the technicians hour after hour after hour.

"One old radio guy lent me what we both thought were enough parts to build a radio----but we were wrong. Dozens of times, I put it together... and nothing. It was discouraging. I spent all my spare time working on it, soldiering different parts together... testing my circuits. Then I got a new carton of used stuff... transformers and tubes and copper windings... and exactly two years after I started... I heard a faint signal through my headphones! I'd done it. I'd built a radio."

No one has ever built a radio in Mani's village before----or even heard of anyone doing so. Mani immediately became famous. He soon built a transmitter...

"It was supposed to be two watts," he said, "but it was actually a little less than one. But I had my amateur radio license (VU2ITI) by then, and I made a lot of contacts with that crude little x-mitter.."

Suddenly, Mani's world was huge. Every day he talked to sophisticated, educated people from around the world----and was taken seriously by them.

It dawned on him that electronics could be his ticket out of the grinding poverty of his youth.

Mani ceaselessly built radio after radio... all from scratch, with salvaged parts... and soon headed off to college to study electronic theory. Eventually he got his master's degree, a teaching job at the local university, and now, when I meet him, is only a few short months away from receiving his doctorate.

Along the way he invented the 'acoustical ocean rain gauge' which remotely monitors the amount and location of rainfall at sea-----a very important device in drought-stricken India.

Anyway, Mani knows his stuff----and proved it by returning to Wild Card a couple of days later with the repaired radio... and installing it in such a manner that its output was radically higher than ever!

"How much do I owe you," I asked.

"How 'bout," he said with a sly smile, "the privilege of your company at my home for a traditional Kerala feast?"

How do you repay such a person... a total stranger in a completely foreign land... for such a kindness? For not only fixing something important for you, but also welcoming you into his heart, home and life?

It was a challenge. Since Mani refused all payment, we made a sizable donation to his amateur radio club----for an upcoming ham fest.

After meeting his lovely wife Sheela and partaking of her wonderful food-----we returned the invitation and had them both aboard Wild Card for a 'typical American meal' of meat-and-mash-potatoes and, of course, hot apple pie.

Learning that Mani was involved with fund-raising for a school for children with 'special needs,' Carolyn and I decided to sponsor a deserving child by paying a year's tuition.

But most of all, we just enjoyed each other's company. Mani was very interested in our voyage, and Carolyn and I were very interested in his life. He stopped by Wild Card almost daily, and introduced us to his entire family, many friends----and even roped me into giving an hour long lecture on marine electronics to his eager students.

One of Mani's teaching assistants was getting engaged, and we had a seat of honor at the day-long party----during which one hundred people taught us to eat with our hands... amid much laughter and love. (The marriage was an 'arranged' one: the groom's parents had found the bridge via a newspaper advertisement and this was only the third time she and the groom had ever met... always with both sets of parent's present, of course!)

Perhaps the nicest moment came when I held his lovely, laughing daughter Krishna (she's mentally challenged) in my arms and sang 'Sweet Adeline' and 'On Moonlight Bay' and 'Old Man River' to her.

In essence, we became fast friends. We relaxed and luxuriated within each other's presence. Mani showed us his world, we showed him ours. Sure, we mostly talked----but after awhile the pauses were as comfortable as the conversation.

That's the very best part of sailing around the world... meeting wonderful people like T.K. Mani of Cochin, India.

Would it be too much to ask "who cares" and what relevence it has to ANY
thing?

I seriously doubt thre are ANY "active" Novices on the air. Most are
probably kids (or were kids) who got the license as part of school projects,
quickly forgotten when the class was over and the grades assigned.

>The North held a HUGE advantage in
>initial numbers; but, the South had an ace up its sleeve - there were
>loads of barefoot 13-year-old Southerners manning the trenches along

It's a horrific fact that innocence is the first tragedy of war. Your
attempt to humorously anaolgize it to Amateur Radio is sick.

>Yes - it is my contention that the Novice ranks also contain
>some of these "aces" as well... barefoot 13-year-old Puerto Rican

There are many husband-wife duos around. Meaning the OM
made his xyl get a Novice license just before the Novice license
was transferred to the VEC program. Before the Novice license
was transferred to the VEC program, all it took was to get two of
your willing old CB buddies (now hams, gen. class or higher) to
sign off on a 610 for your old lady to get her Novice license. Lots
of guys even went so far as to get all their kids licenses the same
way. It is easy to spot these couples. The xyl is restricted to 10m
and 220 mhz and does not know the code, even though 5 wpm was
required. The OM, even though he knows better, will make excuses
for his old lady's lack of operating ability by making excuses like,
"she forgot the code already" "she's does not want to upgrade"
etc. It is even more obvious when his old lady says things on the
air like, "What was that beep beep sound on the repeater?"
(Repeater ID). Even worse is when the OM thinks he can get
away with operating on 2m with his old lady, as that is a violation
of the rules. Then when they get caught by local hams, the OM
starts harassing the guys who caught them. Bottom Line: Ham radio
today has all kinds of nuts and psychos. Don't believe it? Go to any
hamfest!

Lloyd

Hello,

I'm not a ham, but my parents are: AB2OA and AB2OB. I'd like to get the general opinion of the group about callsigns.

Later this year I'll be getting my "nickle extra". Despite the lowly, dumbed down status of the Extra ticket today, I'm thinking about getting a 1x2 callsign. :-)

But some questions come to mind:

1. Any opinions about region? It seems like cheating to get a W3 call when I live in 2-land.

2. What about waiting times? The FCC enforces a two-year wait, but it feels a little tacky to ask for the call of a silent key who died only two years ago.

3. Related to #2, is there a good way to find out about the previous owner, especially if he died several years ago? It seems respectful to at least get to know the fellow whose call you're inheriting.

4. Similarly to #3, it would seem like a nice idea to learn about the general status of the previous owner. If W2ZZ was the best-loved old fellow in all of 2-land, it doesn't seem like a great idea to go asking for his call. Thoughts?

5. Is getting a 1x2 call just begging for harassment? A large part of my interest in amateur radio is historical, so it seems like a natural move. Can folks comment, especially from a historical perspective, on the idea of getting a 1x2 or a 2x1 call, etc?

Thanks!
Len.

This was your reply (I assume) to Dave's request that you prove where he ever said anything about veteran's allegedly being the biggest group of folks with thier hand's out.

Please try and explain your logic here, and how did you get ANYthing from this about vet's having "thier hand's out" over a couple of TVI chokes?

Steve, K4YZ

Hey if you pass the current test for extra-- you are an extra period. Ignore
any comments about extra lite, etc
>

Lots of folks do this as they can't get the desired prefix or suffix in
their area. So common as NOT TO WORRY
>

Once you get the new callsign -- check past Callbooks and ask a club near
where he lived. Asking relatives may get a little dicey.
>

Can't imagine someone harrassing you for a reassigned call. Ignore

While you are at it --- some suffixes are nice for CW -- others catchy on p
hone. N2NY for new York. K2L? your initails. Good luck on getting a call
with the suffix DX.
DXers favor calls with letters that have sylabiance --- S, K, T as it
enhances intelligibilty in weak signal work, etc.

>1. Any opinions about region? It seems like cheating to get a W3 call
>when I live in 2-land.

It's legal, whatever anyone else says about it.

If you ever choose to participate in contests, though, it's considered
good ettiquette to sign the slant bar and your district (if in CW) or say
"stroke" and your district in voice.

>2. What about waiting times? The FCC enforces a two-year wait, but it
>feels a little tacky to ask for the call of a silent key who died only
>two years ago.

If you can get the signature of an immediate blood relative authorizing
it, the FCC will immediately reissue the call you, even if the box isn't nailed
shut yet, otherwise family members get first dibs.

>3. Related to #2, is there a good way to find out about the previous
>owner, especially if he died several years ago? It seems respectful to
>at least get to know the fellow whose call you're inheriting.

There ae some fellows who offer such a service but for a fee. You can
always try to find old copies of the callbook and look up a previous address
and then write a letter "To The Family Of..." if you wanted to.

>4. Similarly to #3, it would seem like a nice idea to learn about the
>general status of the previous owner. If W2ZZ was the best-loved old
>fellow in all of 2-land, it doesn't seem like a great idea to go
>asking for his call. Thoughts?

Sure it would. Some folks might take offense, but then if he was that
revered, someone probably scooped up his call for themselves or for a club
call.

And on the otherhand, what if the guy was a ....uhhhhh......well, LESS
than respected...?!?! You might not want to show up on the air with his old
call either ! ! ! =)

>5. Is getting a 1x2 call just begging for harassment?...(SNIP)

Only from unlicensed ex-radio technicians in Southern California.

>A large part of
>my interest in amateur radio is historical, so it seems like a natural
>move. Can folks comment, especially from a historical perspective, on
>the idea of getting a 1x2 or a 2x1 call, etc?

There's a LOT of histroy behind a lot of calls. A lot of them ae already back on the air...W1AW, W1BB, W1FB, W6AM, etc...

I chose my 1 x 2 for two reasons...One was that it was the MODEX call of a USMC helo unit I was assigned to at one time, and two because the "YZ" is distinctive in CW. I never did know the previous owner other than to have received some old QSL's from the buro when I filed an envelope.

> each bracket, things will start to get REALLY interesting... The
> suspense is killing me - I can HARDLY WAIT.

Total pointless trivia, Stew.

You've also overlooked factors that work against your prediction:

1) Civil War veteran status doesn't expire. Ham licenses do. If a
current Novice or Advanced lets the license lapse for more than 2
years, he/she cannot get it back.

2) Novices have far more to gain in privileges by upgrading than
Advanceds.

3) There's no telling what FCC may do in the future wrt license
classes and grandfathering.

FCC closed off the Advanced to new issues at the end of 1952. I imagine there was similar speculation then about who would be the "last man standing" with the old Class A/Advanced ticket. Then in 1965 as part of an incentive licensing package, FCC proposed demoting existing Advanceds to General, but fortunately that idea was never enacted. Finally in 1967 the Advanced was reopened to new issues. I held Advanced from 1968 to 1970.

Given factors 1 and 2, and possibly 3, it's more likely that the last Novice license will be gone from the database before the last Advanced.

I sure do remember the Jonestown disaster, 900 dead . . ? Hideous.

I'd put ham radio aside by 1978 and this is the first I've heard that
they had an "HQ communications department" in SF. He was a damned
sight better off getting spanked by you in SF than he would have been
if he was with the rest of the whackies. If that's the way it went.

> Most are simply conventions which evolve with time and technology.
> Therefore, enforcing and/or teaching convention is not exactly high on the
> FCC's agenda.

I don't think conventions are what Bill's talking about, Dwight. I think he's more concerned with operating concepts that are covered by the rules, or by "good operating practice".

Here's an example: working split on HF. It's common for DX stations to transmit and receive on different freqs, particularly when things get busy. This keeps the QRM off the DX station so it's easier for the pile to hear him. On 'phone, it's common for the DX to be outside the US phone band.

Yet it's also common to hear US hams calling the DX on his transmitting frequency, even though the DX keeps announcing that he's listening elsewhere. If the US hams are using 'phone outside the US 'phone band, that's a violation, but even if not, calling a DX station on his xmt freq while he's working split does nothing but add to the QRM. It's technically a rules violation because it deviates from good amateur practice, which is to operate in such a way as to minimize avoidable interference. The root cause is almost always clueless newbie syndrome.

Another example of what Bill (and I) are concerned about is basic misunderstanding of certain aspects of the rules. For example, there are hams who think they have a right to use any repeater, in any way they see fit, regardless of the repeater owner's wishes. (There's a good editorial on this subject in the current 'Worldradio' mag). Of course FCC rules say just the opposite - the repeater licensee ultimately decides how a repeater is to be used, and bears the responsibility for it.

The concern for all this stems from the fact that violations of the type described above are much more common today than technical violations.

> Tsk, tsk, tsk. See SHARES. It is documented.

So? Nobody is denying that govt. agencies have their own
communications facilities.

You seem to be saying that hams do not play a role in any emergency.
>
> >Was Hurricane Floyd (1999) a "real emergency"? Ask KT4ST. How about
> >the ice storms of the winter of 1998?
>
> Yeah, how about those hurricanes of the east and the ice
> storms of the north? Real emergencies, right?

"You cannot answer a question with another question". Your own words,
Len.
>
> How about the Loma Prieta and Northridge earthquakes?
> Little local "left coast" piddly things? Of course.

Who said that? Not me.

> The only
> sanctified, official emergencies are what Newington defines
> on "activating a net" and sounding very public-service-like.

Typical diversion by Len. Examples of CW use by hams in real
emergencies are given, but he continues to deny they exist. There are
none so blind as those who will not see.

> >You missed the point, Dave.

Tell ya what, Len...I'll think about not posting here about military
communications when you stop posting about amateur radio.

> >Note that what constitutes "1930s status quo" is not defined in any
> >way.
>
> Having trouble understanding euphamisms and aphorisms?

No. You have trouble writing clearly, though.
>

> sinking barbs in a roundabout way.

I can reply directly. I usually choose not to.

> >The important thing is that Len presents his non-amateur experience as
> >proof. It isn't.
>
> Oh! "PROOF!" Well, ham radio is DIFFERENT than all other
> radio, right?

Actually, yes. That's why there are different radio services. If
amateur radio were the same as some other type of radio, it would not
need its own spectrum or its own rules and regulations.

> HF communications is DIFFERENT if done by
> non-ham equipment versus ham equipment, right?

The goals and resources are different. That's obvious to almost
everyone but you, Len.
>
> Oh, wow...NON-ham is nothing, ham is everything! :-)

You said that - I didn't.
>
> >The main reason hams do ham radio is because it's fun. Len wants to

>
> Oh? Can you "prove" that with Google Quotes? :-)

Sure ;-)
>
> How does advocacy of removal of a morse code test consitute
> DICTATING WHAT HAMS SHOULD DO FOR FUN?

You tell us, Len.

btw, FCC removed not just "a" morse code test but two of them.

Your posts here go far beyond advocating removal of a morse code test.
You play a game best described as "spoil the party".
>
> You are getting STRANGE, Rev. Jimmie. Very strange.

I'm not the one calling people names and commenting endlessly on a
radio service I'm not involved in.
>
> >The point is that Len repeatedly minimizes and dismisses the help and
> >public service performed by hams using ham radio.
>
> Hello? Is your reading comprehension THAT bad, Jimmie?

No, it's that good. Also my memory.
>
> I've been MINIMIZING the selective editing and propagandizing
> of ARRL...NOT the US amateur radio service.

BULL.

> Wake up, boy.

Interesting. First you call me an old fart, now you call me boy. Is
that part of advocating removal of a morse code test?
>
> >There was a first-hand account posted here about the search efforts

> and a half, "factual, clear, and concise." Newspapers aren't
> mentioning amateur radio, though, so regular journalism can't
> be as "factual, clear, and concise" as ARRL, huh?

The post I refer to was not done by ARRL. It was written by a ham who
was there, part of the search. Documented the service given by amateur
radio communications. Were YOU there, Len? I don't think so.

The fact that you reply the way you just did above is proof that you
minimize and dismiss the help and ublic service performed by hams
using ham radio.

And that's a fact.

> >Most of the pejorative-hurling has been done by Len, though.
>
> Tsk, tsk, tsk. Go live in Google for a while, Jimmie, search

> :-)

You're saying that pejoratives hurled by another justify your
behavior. Sounds like the classic "BUT MOMMY! STEVIE DID IT FIRST!!!"
that I would expect from a four-year-old.

I would not accept such a lame excuse from a four-year-old. Nor from
you. Live with it.

>
> No, little Jimmie (not yet born in 1953), such skills were NOT
> RELEVANT TO THE NEEDS OF THE REST OF THE RADIO
> WORLD.

That's just wrong. You are mistaken, Len.

> Hello?

Goodbye.

> The REST OF THE RADIO WORLD was busy with
> voice and teleprinter communications just beginning to be
> the overwhelming majority of message transmission.

Do you have an accurate count of how many radio messages were handled,
per mode, to make that announcement?

The fact of the matter is that back in 1953, and for decades after,
Morse code was used by many radio services besides the ARS. Of course
such use was declining, but morse and morse skills were still very
relevant in 1953 and for many years afterwards. In amateur radio,
those skills are still relevant.

That relevancy doesn't prove that such skills must be tested for a
license. But to say those skills were not relevant is simply untrue.
>
> >A lot of historical accounts say that's just plain wrong.
>
> Tsk, tsk, tsk. Jimmie's "lot" is confined to ARRL publications.

Nope. Not at all.
>

Since you are interested in the history and traditions of Amateur Radio
please accept these opinions from me.

A W/K one by 2 or one by 3 at one time were considered 'prefered calls'.
This all went out the door when the fcc got lazy and went to a whole bunch
of new callsign blocks and refused to break into the new program and
re-issue ANYTHING.

That being said....from that point on (late 70s or so) a bunch of strange
callsigns came about. Still having trouble with some of them...hi. The
concept of 'prefered calls' have been lost. Then the FCC in another stroke
of insanity basically vacated the call districts that served a useful
purpose.

Basically what Im saying is its open season and I don't like it. But
neither do a lot of others, which means squat. You obviously have a good
mind and Im sure you can work out the way to go.

Enjoy and have a nice life.

I installed it and had some fun with Echolink last night. One qso was
with a ham in Japan. He was mobile and I was linked to a repeater
in his town. At first he thought I was in his town, but I described
the echolink system, and he enjoyed it. I logged it in the log book
as "echolink" under "frequency" and "mode". Of course it wouldn't
count for "wallpaper" awards but it was fun.

This is often mandated by the contest rules if the call districts are the
actual multipliers. If the whole country counts as a single multiplier
or if the multipliers are states, there is no need to add the /something.

I used to add the /6 for ragchewing but gave it up as rather pointless
since the FCC no longer requires it. I just say W7TI located in Southern
California, and let 'em figure it out.

I'm trying to think of a useful purpose that served. If ham call signs had been issued without regard to district from day one what would have been the harm? That's what's happening now, in effect, and ham radio goes on just fine it appears. Where am I wrong?

You used the word "insanity" so I'm expecting a pretty convincing reply. Something more than "I don't like it".

I've never seen one of those. Just Amateur Extras.

> Despite the lowly,
> dumbed down status of the Extra ticket today, I'm thinking about
> getting a 1x2 callsign. :-)

Just do it. Or a 2x1
>
> But some questions come to mind:
>
> 1. Any opinions about region? It seems like cheating to get a W3 call
> when I live in 2-land.

It's not cheating at all, but it does cause a bit of confusion because
folks think you are from somewhere else. I got my present call when I
lived in Wayne County NY back in 1977, and kept it when I moved back
to the Phila. PA area in 1979 because FCC would not have reissued it
to somebody else.

If I were you, I'd get a call that matches where you live if there are
any available. But it's not a big deal.
>
> 2. What about waiting times? The FCC enforces a two-year wait, but it
> feels a little tacky to ask for the call of a silent key who died only
> two years ago.

Not tacky at all. The two-year wait gives the family plenty of time to
go after it if they want. It also prevents the loss of a call if
somebody forgets to renew (the two years is same as the grace period
for renewal).

Also remember that not all families report SKs to the FCC. If nothing
is reported, the license stays in effect, and the callsign
unavailable, until two years after the license runs out. It's possible
for a ham to have been dead for 12 years before his/her call is
available for vanity request (ham sends in renewal papers, dies soon

after, nobody tells FCC).
>
> 3. Related to #2, is there a good way to find out about the previous

> general status of the previous owner. If W2ZZ was the best-loved old
> fellow in all of 2-land, it doesn't seem like a great idea to go
> asking for his call. Thoughts?

Famous calls are almost always spoken for by the family before the 2
years is up.
>
> 5. Is getting a 1x2 call just begging for harassment?

Yes, but don't let it get ya. As long as the call is not
obscene/profane/indecent, go for it.

> A large part of
> my interest in amateur radio is historical, so it seems like a natural
> move.

Nearly all 1x2s that start with W or K have had previous holders - in
some cases, several previous holders. OTOH, 1x2s beginning with N and
2x1s often have few or even no previous holders.

> Can folks comment, especially from a historical perspective, on
> the idea of getting a 1x2 or a 2x1 call, etc?

First off, be aware that there's no guarantee you'll get the one you
want, so the FCC encourages that you submit a list.

Second, some 1x3 calls are actually more "historic" than some 1x2s.
Like W9MWC.

Third, the big advantage to a short call is that it speeds things up
in contesting and dxing.

Yes, there was a time when a 1x2 or even a 1x3 meant you were an
experienced oldtimer. And there was a time when the numeral in your
callsign always matched your location. Those times are long gone, and
they'll probably not return.

Good luck!

>Despite your ardent insistence to the contrary, Len, there is no "one" mode
>of communication that epitomizes amateur radio. That's one of the things
>that makes it interesting.

Not in here... :-)

>While you might continue to insist that a REAL ham must worship at the altar
>of CW so that others in the hobby might consider them worthy (which I still
>don't get, since I've never heard anyone say such a thing on the air, but
>ONLY off the air), the facts are out there if you bother to listen...

I tried to point that out to the Merrie Morsemen in here,
Jackie but all their master switches are in Off position.

>I turn
>the VFO knob up and down the bands and hear the dits and dahs of Morse, the
>bleep-bloops of RTTY and other digital modes, lots of tinny, untuned
>vocalizations of SSB (if I don't tune explicitly to every QSO I hear) plus
>many other weird noises that I cannot yet identify.

Really? :-) "Weird noises?" Oh, my, you mean there are
real "weird noises" out there? I haven't heard any "weird noises"
for a long time since I can identify all of them as various modes
carrying information. Used to generate and send some of those
modes and modulations...most of those not allowed in the
amateur radio bands on HF.

>Some ops may prefer one
>mode, and some may work multiple modes.

Ahem...there's only ONE acceptible mode to the Three
Morseketeers in here, the one that shows Mastery of Radio.
Can you guess what that mode might be? [the familiar
acronym can also stand for "conventional wisdom." :-)]

>The only thing that I think
>"epitomizes" amateur radio communications is that there IS no "one" way of
>communicating.

I keep trying to point that out in here and the Three
Morseketeers shout, holler, weep, and wave their sword
hilts around when not waving their morsemanship plumes.

>Those who insist that Morse is an onerous, backwater mode of communication
>and who don't want to be forced to learn it in order to upgrade will
>probably see their position vindicated soon by the powers that be.

Ah, yes, good old "international LAW." :-)

Tsk, tsk, tsk. What MIGHT be discussed in June in Geneva
(WRC-03) is a total rewrite of all of S25, not just S25.5. Don't
bank anything on that, it is a minor matter as far as ALL of
this world's radio. Many, many, many items of non-amateur
radio to take up by the administrations in summer Switzerland.

What be this "vindication?" In FCC 90-53 the FCC stated that
it didn't consider a morse code test to be worthwhile for its
task on determining any amateur applicant's qualifications for
an amateur radio license. That was in 1990. 13 years ago.
FCC said it again in NPRM 98-143. 5 years ago. The IARU
took a position against the morse code test nearly 2 years ago.
ARRL still hasn't made up its mind, won't take a stand either
way (they say the speak for all US amateurs).

How soon is the "soon" you mention? :-)

>I don't
>care one way or the other about Morse testing going away, so long as it's
>not outlawed as a communication method (some people will always want to work
>it-- so what).

You aren't arguing any minority view, Jackie. That's a good view,
flexible, adaptable to change and new conditions.

In this newsgroup it's a Very Different condition. The Three
Morseketeers (and their aging bus driver buddy, Dartisgone)
keep commanding "IT'S THE LAW!!!" as if they are authorized
amateur kops. :-)

Remember the old mantra, "CW gets through when nothing else
will?" :-) Dates from the 1930s and the official pages of QST.
Morsemanship is EVERYTHING about the radio expert to them.

>That certainly won't happen.

Not a good statement. Nobody knows what will happen, despite
what the Three Morseketeers "knowing what will happen."

>It will be interesting to see
>what happens when it's time to decide what privileges the new Techs will get

>on HF if E1 is done away with. However, I will certainly not be whining for
>one nanosecond if/when the new Techs get HF privileges without taking E1. I
>don't consider this anything to get my undies in a bunch over.

Is that like the Churchillian (?) statement "up with which I will
not put?" :-)

>I think that the key to the future of AR does not reside in any one mode,
>but rather in the people who're attracted to it in the first place.

The "attractiveness" has become less with age and the refusal
of so many to adapt to change. Some of the BDOFs do a
bad parody of the famous closing scene of the film "Sunset
Boulevard" (Gloria Swanson announcing she is ready for her
close-up).

>With
>some exceptions (and there are always exceptions), the type of people that
>are attracted to this hobby are technically oriented and fascinated by
>technical/scientific stuff that the general public finds mostly
>undecipherable, and therefore many (if not most) of us who're initially
>interested are plenty capable of keeping this hobby alive via the sheer
>force of our curiosity and willingness to experiment.

Ahem. One of the Three Morseketeers has already Given
Orders (!) in here that interest-in-radio MUST be shown by
a grant of an amateur radio license! No arguments allowed!

[must be some addictive property of cashew nuts...]

>Such experiments have
>borne the fruits of advancement in RF communication.

Like SSB? First "fruit" in wireline long-distance telephony? :-)

>There are many new
>digital modes that've come out in the past couple of decades; there are many
>new, state-of-the-art, tiny, yet cheap commercial rigs, and there are many,
>many design plans on the Internet for antennas, transceivers, etc. etc.

Except for PSK31, innovated by G3PLX, a clever Brit who has
not hesitated to innovate since the 1970s, all those "new digital
modes" were born and borne in the commercial world of radio.
Spread spectrum was given its impetus by the militaries.

The inventiveness and innovations of Japanese electronics gave
rise to the "state of the amateur art" in HF, VHF, and UHF ham
equipment. That's shown by the history of hamvertising in the
official periodicals of ARRL.

A singular, elegant new innovation is the "Tayloe detector" by
Dan Tayloe. Only a terribly small percentage of today's US
radio amateurs would recognize it in its original form, a
switched commutating filter using a low-On-resistance, low-

noise CMOS IC. Dan Tayloe saw it where hardly anyone did
and got a US patent on it as a mixer. Well-deserved patent
grant but all the "ham experts" seem to recognize is that it
makes a neat QRP rig. :-)

>But
>no matter how hard we yell to get the word out about AR, only some will be
>inclined, indeed able to hear-- and, more importantly, understand-- the
>value of this hobby.

Gosh! Really? How about the Corpse of Morseketeers who
should "It's a SERVICE!" while waving their morsekets? :-)

>If you've got an amateur radio license, use the privileges you have and have
>maximum fun with them. Don't let the jackass know-it-alls tell you what is
>fun.

As you might have noticed, I do NOT let the jackass braying of
the morseketeers "telling me what is fun!" :-) :-) :-)

Oh, and I've had a commercial (first class, one test) license
since 1956...47 years ago. That certificate sits in a safety
deposit box since it isn't needed in retirement. One or the
other of the Three Morseketeers keep reminding me that "it isn't
lawful for the amateur bands" over and over and over and over
and over and over again. [gotta love it! :-)]

>As a human being that has reached adulthood, YOU get to decide what is
>fun about your hobbies.

I sort of came to that conclusion some time ago.... :-)

>I've got my HF privileges and rig set up now, but I
>still can't wait to get a 6 meter SSB transceiver and try out the "Magic
>Band" before the sunspots disappear. A new Tech licensee can do this from
>the get-go, no code required.

That's nice. :-) I have a little familiarity with VHF...and UHF...
and the microwave region...and MF...and LF...and VLF.

But, I MUST take a code test to "get on HF legally" (in the
ham bands) because "It's the LAW!" Haw.

>Life's too short to not have as much fun as
>you can in your hobbies of choice.

Er, I don't think the Three Morseketeers and Dartisgone
allow "fun" on a personal choice. All must do Their kind
of "fun" or it is not "fun!" "It's a SERVICE!" "CW gets
through when nothing else will!" Etc., etc., etc. :-)

One of the Three Morseketeers keeps insisting I must
(no, MUST, all-caps imperative) take a morse test for an
amateur radio license to properly show my "interest in

radio!" That after a bit more than half a century of
involvement professionally and militarily and avocationally
as a technical hobbyist. :-)

Those oh-so-serious order-givers are the Cultists. :-)

Thank you for the information on sound effects from cheapie
PL-259 knock-off connectors. I only connect to UHF type
connectors with adapters to other series. Type UHF went out
a very long time ago in military, avionic, and commercial radio.
Only amateurs and CBers seem to use those. :-)

>Good. I didn't write that it was. I asked if you followed orders when
>you were a little soldier?

I never answered you. You don't deserve an answer. :-)

I was adult size in the US Army, not "little." :-)

Prove I did NOT follow orders. Begin with NARA.

>No one can obtain an HF access as a radio amateur without passing the
>little five word per minute morse exam.

Tsk, tsk, tsk. I had HF access just three months ago from
a moored 35-footer in a Ventura, CA, marina. Nice little
SGC 2020 (made in the USA). No amateur radio license
required. In fact, an amateur radio license would not be
authorization at that particular frequency, even with alleged

State Department control! :-)

>You've "argued". The current regs set a 5 wpm code test for HF access.

Yes, yes, your extreme Robustness. No one is arguing
breaking any law. The talk is about CHANGING THE LAW.

Hello? Are you still doing a bad Otto Preminger imitation?

>No discussions have been stopped. I've not attempted to stop such
>discussions, Foghorn.

You couldn't, not even with a blaring foghorn. :-)

>It is certainly a subject. You told us you were going for it.

Tsk, tsk, tsk. Jimmie Miccolis said I "make frequent errors."

Don't you want to use that to damn me? :-)

You PCTAs are an uncommunicative bunch who lack
steerage way and a compass needle. :-)

>That's right, Windy. The regulation sets the requirement. What is it
>about that you don't understand?

What is it about free speech and talking about changing laws
that YOU don't understand, Herr Robust?

You've either forgotten some US Constitution amendments or
can't understand them. <shrug>

>> >The current five word per minute test is less than what would be

How does anyone "prove" a hypothesis?

Issue a hypothetical document of hypothetical reference?

>He just keeps proving me right.

No, poor baby, you are only proving you are growing as sick
as Sgt. Putz.

>Proof after proof after proof.

Have you been drinking?

>In other words:
>
>His hobby is wasting time. Your time.

Then why all the posting to others speaking about another?

Tsk, tsk, tsk. You must be wasting time.

>3. Claimed that I described Amazon.com as "bankrupt" when no such
>claim was ever made by me. What I actually wrote was that Amazon.com
>was not making a profit, in direct opposition to Len's claim that
>Amazon was a "profitable" company. I backed it up by posting links to
>Amazon's financials of the time.

Tsk, tsk, tsk. That was ONLY under what I mentioned about
ARRL charging anyone extra shipping charges for publications
ordered directly from Newington. Amazon.com did not charge
extra for a minimum order and it resells all ARRL publications
at the same price as any retail outlet store. :-)

Those who follow business trends other than "official" ARRL
"news" would have known that Amazon.com was already
breaking even three quarters ago and nearly three weeks ago
announced (in national news) that it had two PROFITABLE
past quarters. Amazon.com still has the minimum-quantity
NO SHIPPING CHARGES offer. ARRL still charges extra
for shipping. :-)

>But Len keeps quoting me as saying Amazon was/is "bankrupt". Just
>another of his untruths.

My apologies, parson. I was equating mental and emotional
bankruptcy toward ARRL criticsm with financial bankruptcy
of a real business. :-)

>His hobby is wasting time. Your time.

Tsk, tsk, tsk. No one is holding any weapon to the parson's
head to force him into replying (by third-person means),
writing long and anguished critiques that read as sermons.

"If thine eye offend thee, cast it out..."

>In other words, Len cannot reply to my posted facts, so he does the
>behavior described in my quote.

I will pick and choose replies to statements called "facts"
which are simply lore, mythos, nonsense or personal
opinions of the self-righteous. The self-righteous think their
sermons are "fact" since they perceive themselves as
never being wrong. :-)

>Here, I'll answer those:
>
>> I've asked before but you didn't respond, what is "overly proud"?
>
>Any mention of any accomplishment by those who disagree with Len.

When the parson receives a Nobel Prize, I will cheer him.
:-)

Those who act like prissy pedantic parsons get what
they deserve. :-)

>Because keeping the location undisclosed removes a whole line of
>possible insults from Len's NG ammo case.

Translation: Fear of the unknown. :-)

>Len wants to minimize the fact that I have electrical engineering
>degrees from major universities (Penn and Drexel, right here in
>Philly) and that I have designed and built much of my own ham
>equipment in my 35 years as a ham. Nowhere have I claimed to have
>designed and built all of it. That's just another of Len's misquotes.

Tsk, tsk, tsk..."much" is the new morph of the original "all."

Let's grab the chassis punches and design another one!
:-)

>Direct insult in an attempt to get me to reply in kind.

"Brain dead old fart" is a phrase used by Jim Kehler, KH2D
(a definitive PCTA) over five years ago and still being used
by him on his website. :-)

>> It looks as if what you have done is simply
>> provide proof of his statement about your behavior.
>
>Len does that with almost every post.

Every single one? :-)

In order to qualify that quantitatively you would have to post
EVERY ONE of my posts in here and show the tally.
Go ahead, make everyone's day by posting ALL of them.
:-)

>Does anybody think that posting info about my employment would result
>in anything from Len except more insults, ridicule, name-calling,
>factual errors, ethnic slurs, excessive emoticons and general
>infantile behavior? No matter what the job actually is?

>>>WHAT PERIODS were they awarded for?
>>
>> As long as the unit is organized. Presidential Unit Citations
>> are awarded to a unit. Hello? Can you read, dumass? Do
>> you need the ARs (Army Regulations) or SRs (Special
>> Regulations) for a non-amateur-radio-related subject and
>> for incessant arguing in here? You lose either way.
>
> More arrogant refusal to specify for what periods of time the awards were
>earned...Which only leads me to beleive this is yet another Leonard H.
>Anderson claim to an award won without his input.

Irrelevant material for an amateur radio newsgroup.

Presidential Unit Citations and other honors have no specified
"period." Once awarded they stay with the unit. If a unit is
disbanded, honors stay with a military branch historical unit.
If a unit is reformed, the honors are once again the unit's own.

> I read fine, Lennie. As for the adjective, I have asked you three
>different ways to tell us from what day to what day the PUC's to which you
>lay claim were awarded.

Irrelevant for any amateur radio policy newsgroup.

A Presidential Unit Citation is not some "soldier of the month"
thing. It is an honor bestowed on ALL members of the unit
receiving the award.

For further disputes about US Army matters, take your
grievance to the Adjutant General, United States Army.

> Lennie is once again dodging the question because he knows that if he
>reveals the periods over which the PUC's for his unit were awarded, we will
>know that he was NOT in the unit for the periods cited.

There is no "dodge" or "lie." The Far East Command Signal
Service Battalion received two Presidential Unit Citations
during my 35-month assignment there. All 1200 members of
the Battalion were entitled to wear the emblem of a laurel
wreath with a numeral "2" on the lower right full-dress uniform
right sleeve. We did in 1955. The year before all 1200 members
of the Battalion wore just the laural wreath with no numeral.

My assignment to the Battalion was from February, 1953, to
January, 1956.
.
The award information, all details, is available from the
National Archives and Records Administration (they have
a website giving information request instructions) and is
on file with the US Army Historical Center. In the following
years there was reorganization of all US Army units in
Japan. The 78th Signal Service Battalion is the current
signal unit whose unit ancestry includes the FEC Sig Svc
Bn. The 78th is based at Camp Zama, Japan, and is
under the command of the 516th Signal Brigade at Fort
Shafter, Hawaii, as part of USARPAC, the US Army Pacific.
The callsign of USARPAC Headquarters is ADA, the very
same callsign used by the FEC Sig Svc Bn a half century
past.

> In other words, he did not contribute to the character of the service for
>which the award was made...He did not contribute...(as if we didn't already
>know...)

False. The entire Battalion received both Presidential Unit
Citations. We wore that proudly.

For details, contact NARA or the US Army Historical Center.
For disputes about unit awards and honors, go to the
Adjutant General, United States Army.

For better mental health, contact your local psychiatrist and
get treatment.

This is an amateur radio newsgroup, not a playground for
deranged individuals with distinctive unit insignia.

There is no such date as "Fevruary 18th 2003" as there is no month named "Fevruary." The correct syntax and punctuation should be "February 18, 2003" or "18 February 2003."

There are no amateur bands below 30 milliHertz. The lowest ITU-R allocation recommendations stop at 9 KHz and go no lower.

> That's the law.

No, you wrote a number of errors and mistakes. It would be correct if the suggestions and recommendations were made.

The purpose of the districting of ham radio calls were two fold.

1. Allow the issue of many more calls with the same suffix. I.E. W1AW, W2AW...etc.

2. Provide a easy means of locating the station for the FCC monitoring that actually used to go on.

By REQUIRING hams to sign PORTABLE (district) made it much easier to tell where the station was. Making it a lot easier for contest operators and general ops by knowing which way to point the beam...etc.

To you these reasons may make little to no sense. Considering your obvious smart ass response ... fire away.

Dan/W4NTI

Nonsense. W1AW, W2AW, etc. could have all been in the same town if
there were no districts.

> 2. Provide a easy means of locating the station for the FCC
> monitoring that actually used to go on.

More nonsense. The bad guys, whom the FCC is really interested in, will
not give their correct call or portable designator anyway, and besides,
if it's a *real* call, all the FCC has to do is look it up in their
database. If you're an FCC monitor and you hear W4NTI breaking a
rule, do you *know* he's in the 4th call district? Of course not. And
would it matter if you did? You just mail the pink slip to his address,
don't you?

>

A good point for contesting, but I assure you the districting system was
not created for the benefit of contesters. I'm still wondering why it
was created at all. I suspect the original plan was to administer each
district separately, but that either never happened or was abandoned
early on. And of course, the FCC eventually abandoned the strict
district system anyway since it proved to have little or no value.

Why'd you snip your great statement, Foghorn Lenhorn? What would you expect but a dimissive attitude toward one who makes such an unsubstantiated statement? What would you know of what HF amateur radio is all about? You aren't a particpant in amateur radio. You aren't proficient in morse. You aren't a DXer. Except for those minor details, you da man!

> Herr Robust "knows" all hams? :-)

I didn't write that I know all hams. I wrote that you know a few hams.

You aren't a radio amateur. I've been an active radio amateur for nearly forty years. Statistically, who'd be more likely to know a greater number of hams, you or me? Who'd be more likely to know about what goes on in amateur radio, you or me?

Thank you very much, Mr. Burke! Appreciate the tip.

I tried out some small cans. The V-8 ran down my collar
and the string got caught on the front panel knobs. Nothing
to plug in anywhere. Please advise.

Gosh, old timer, your TV set busted back then?

CBS News had video of the middle California cult station
in operation with sound. Before the "spanking." Used what
looked like ham gear...old SSB transceiver (imported).

"Insult?!?" Did I name names?!? :-)

>> Of course, AOL allows 7 screen names.
>
>And you have used "nocwtest", "lenof21", "averyfine", "averyfineman"
>and "lenover21" to post to this newgroup over the past 5 years.

You betcha, parson. Got more screen names you haven't seen!

>In at
>least some cases it was clear that you were trying to disguise your
>identity by doing so.

It WAS?!?!? Oh, the horror of the thought! Capital Crime
Against the State!!! Heresy!!! Sacreligious!!!

Me do a disguise?!? :-) As WHAT? :-)

As a "retired Army colonel whose 'son' was 'behind enemy lines'
in Iraq during the Gulf War sending out intel by CW?" No, not me.

As one of several pseudonyms of a 2x2 in here saying he was
"suddenly activated to Afghanistan from under a NYC bridge?"
No, not me.

As a play-doctor who claimed "seven hostile actions" but didn't
name, identify, or otherwise elaborate locations, etc.? Nope.

How about as a parsimonous pastor working in stealth along-
side the vice-president at an undisclosed location? Definitely
not me. :-)

How about as a long-time AOL subscriber with a surname in
multiple use by many who can't use his full name because it
is too close to someone else's screen name? Now that would
be most definitely true!

Yeah, and how about a former staff member of Ham Radio
magazine whose full name and postal address was printed
with every article? Yup, that's very true!

>> Isn't that just a "bad" thing, though? :-)
>
>Tell us why you need different screen names to post here.

Hello? Didn't I just do that? Are you sight-disadvantaged?

Must be. I've posted my full name and mailing address in
here several times. A bit hard to "sense" who is writing
in here, pedantic parson? Lighten up, boy. :-)

HEY!!! Look up at the top of this post and see what the
screen name of the parson says. Does it identify his
real name? No. The real name in parenthesis is just
a mister N2EY, the same as the screen name. Single
name style. Nobody else has a surname like that. Can
that be a real real name? [does anyone care? :-)]

>Let's see...you insulted Dave's job and ethnicity in one sentence. No
>smiley for you.

Awww... No smiley! Tsk, tsk, tsk. :-(Boo-hoo.

>Here's a clue, Len: Time of posting is not necessarily the time a post
>is written.

Here's another clue, Jimmie: Your posts do not represent
Ultimate Truths. [strange but true...]

>> Isn't that rather late for workers at an undisclosed
>> location who do early runs at 5 AM? :-)
>
>Here's another clue, Len: You don;t know how to do time conversions
>very well.

Of course, with 7 time zones in the USA and only five fingers
on each hand, the arithmetic is very complex? :-)

The parson didn't write something about running at 5 AM?
Oh, my!

>> Morsemanship is the Prime Directive of amateur knowledge,
>> the ne plus ultra of radio achievement, used worldwide as
>> the "common language" for 599 exchanges.
>
>Typical Len non-response.

Okay, have it your way, take away the Gold Star on my
report card along with the smiley...

>So? Nobody is denying that govt. agencies have their own
>communications facilities.

They do? You KNOW this? Wow.

>You seem to be saying that hams do not play a role in any emergency.

Wow...a black-and-white parson in a color world!

I'm saying that hams don't play the role written by ARRL to
that big an extent. Hello? ARRL self-congratulatory praise
errs by omission. As often as it can get away with it.

>> How about the Loma Prieta and Northridge earthquakes?
>> Little local "left coast" piddly things? Of course.
>
>Who said that? Not me.

Gosh, Rev. Jimmie, we readers don't really talk behind just
your back when we are off the computers...

>Typical diversion by Len. Examples of CW use by hams in real
>emergencies are given, but he continues to deny they exist. There are
>none so blind as those who will not see.

Temporary blindness from the exaggerated prose pole-axes
by ARRL. :-)

>Tell ya what, Len...I'll think about not posting here about military
>communications when you stop posting about amateur radio.

You've posted about military radio?!? Were you activated to
Afghanistan from under a NYC bridge too?

>No. You have trouble writing clearly, though.

C-L-E-A-R-L-Y. There. I wrote it.

Should I type in "slow English" like the VOA broadcasts?

>I can reply directly. I usually choose not to.

No courage? Amateur extras must show their dedication
and resolve to the amateur community many ways, one
of which is trying to destroy skeptics and those without
the Right Attitude! Courage and Resolve!

Kill the Infidels! :-)

>Actually, yes. That's why there are different radio services. If
>amateur radio were the same as some other type of radio, it would not
>need its own spectrum or its own rules and regulations.

Wow. All that with an ivy-league sheepskin education?

Now, now, one of your buds already said that anyone without
a license CANNOT KNOW ANYTHING about amateur radio!
I do wish you Three Morseketeers (with Dartisgone) would get
your acts together.

>> HF communications is DIFFERENT if done by
>> non-ham equipment versus ham equipment, right?
>
>The goals and resources are different. That's obvious to almost
>everyone but you, Len.

Including all of radio physics, pedantic professor? :-)

Is that anything like software-defined radio that changes
function just be reprogramming? You know, like some
regulator makes a regulation and suddenly everything in
radio physics changes because of human intervention?

>Your posts here go far beyond advocating removal of a morse code test.
>You play a game best described as "spoil the party".

Mighty morsemen of the elite amateurs done spoiled a
"party" a long time ago, long-timer. They managed to mold
amateur radio into something they could do and then
established a hierarchial system of "superiors" and "inferiors"
based on morsemanship. They managed to convince the
FCC of older times that this was truth, but the FCC saw it
was being duped by 1990 (see 90-53).

Jimmie, boy, you've assumed guruism and some kind of
Voice of Truth in just repeating ARRL mythos and lore that
was installed before your time. Not anyone's fault but your

own.

>I'm not the one calling people names and commenting endlessly on a
>radio service I'm not involved in.

There you go again...good old saw equations about
"involvement" (through licensing). :-)

>> I've been MINIMIZING the selective editing and propagandizing
>> of ARRL...NOT the US amateur radio service.
>
>BULL.

Nope. You are a Believer in ARRL, Jimmie. It's Total.
They can't do anything wrong. Anyone who is against
ARRL is against you (and probably all of mankind).

>> Wake up, boy.
>
>Interesting. First you call me an old fart, now you call me boy. Is
>that part of advocating removal of a morse code test?

I call you a sermonizer and a pedant, too.

I won't call you when supper is ready, though...

>The post I refer to was not done by ARRL. It was written by a ham who
>was there, part of the search. Documented the service given by amateur
>radio communications. Were YOU there, Len? I don't think so.

YOU weren't out here for the Loma Prieta or Northridge
earthquakes, either. Come to think of it, amateur radio
during the 1994 Northridge earthquake was conspicuously
absent. Was that because nobody from ARRL was directing
the earthquake aftermath?

>The fact that you reply the way you just did above is proof that you
>minimize and dismiss the help and ublic service performed by hams
>using ham radio.

When hams do ublic service, I'll be the first to say something.

Before I do that, what the heck is a "ublic service?" :-)

>You're saying that pejoratives hurled by another justify your
>behavior. Sounds like the classic "BUT MOMMY! STEVIE DID IT FIRST!!!"
>that I would expect from a four-year-old.

Four-year-olds can pass amateur radio license tests. :-)

I've never taken an amateur radio license test.

>I would not accept such a lame excuse from a four-year-old. Nor from
>you. Live with it.

Awwww. Jimmie getting beligerant in here? Tsk, tsk, tsk.

>> Hello? The First Amendment hasn't been waived. HF radio is
>> still HF radio regardless of the allocated radio service using it.
>
>Does that mean all of HF radio should be governed by the same rules?

Is that your understanding of it?

Gosh, I think you are standing too far under it to see it...

>> Does the periodical name "Ham Radio" magazine strike a bell?
>
>Yup. A defunct little fanzine that was pretty good in its day.

Sorry, that is "Electric Radio." I was talking about a
news stand publication available nationally and in print
for 22 years. One that existed solely on advertising
revenue without having an entire membership organization
to subsidize them.

>> (or beep your BFO?) About 50,000 printings every month for
>> 22 years before sale to CQ Communications.
>
>And no more new issues in over a decade.

Incorrect. CQ bought Communications Technology, Inc., and
with it all the rights of HR and HR Horizons, the HR Bookstore,
etc. CQ used that base for Communications Quarterly, a
(guess what) quarterly periodical also sold nationally and
internationally at retailers.

>Doesn't make your faulty logic here any less faulty.

Tsk, tsk, tsk, are you going to argue that CQ did
NOT buy out HR? Are you saying that HR was
NOT about ham radio?

>> Everyone understands your words.
>
>You're the only one who attaches that meaning to them.

Incorrect again. Even if you cannot understand your words,
all the readers can fully understand your words.

>Same person as your hypothetical first-grade teacher.

Are you going to do a Battle of Google again? :-)

Tsk, tsk, tsk, you already mentioned four-year-olds.

>You are advocating that the rules be the same as 50 years ago, then.

No, I am saying directly that YOU want to live in that
world, old-timer, along with the other BDOFs. Live with it.

>Not at all. But it's typical that you would put down the
>accomplishments of others.

Building a K2 from a kit is an "accomplishment?"

>> Poor baby. Must really get your goat to know that someone
>> actually worked HF comm NOT in ham radio before you were
>> born, ey?
>
>Not at all. But it sure does seem to get your goat that hams get on
>the air without paying proper homage to you and your accomplishments.
>Live with it.

I HAVE lived with it from the mighty macho morsemen,
especially the Three Morseketeers (with Dartisgone).
No homage and lots of fromage from them.

>I never claimed to be an expert at anything.

Oooo...is THAT statement going to come back and haunt
you! :-)

>I'm not him. I've asked him to stop calling you names, btw, but you
>ignore that fact.

heh heh heh hehehehehehehehe. Really worked, didn't it?

>> Or the defunct diplomat who thinks State Dept. comm
>> is an offshoot of ham radio.
>
>Who would that be? Can't be K8MN - he's not defunct.

Mentally...well....

>> Or the guy who works at an
>> undisclosed location after doing 5 AM morning runs... :-)
>
>Is that a bad thing?

You said I had trouble with time-zone conversions. Does
that mean you DON'T run at 5 AM?

>That's just wrong. You are mistaken, Len.

>> The REST OF THE RADIO WORLD was busy with
>> voice and teleprinter communications just beginning to be
>> the overwhelming majority of message transmission.
>
>Do you have an accurate count of how many radio messages were handled,
>per mode, to make that announcement?

Each and every one? No. :-)

What do YOU know of the rest of the radio world?

>The fact of the matter is that back in 1953, and for decades after,
>Morse code was used by many radio services besides the ARS.

Are you going to name each one of those "many radio services"
like you demand of others? :-)

>Of course
>such use was declining, but morse and morse skills were still very
>relevant in 1953 and for many years afterwards.

How can you KNOW this? You don't know much of the
rest of the radio world.

>In amateur radio, those skills are still relevant.

Only the mighty macho morsemen are "relevant." :-)

Yes, yes, we know your drill, just one morseman alive
and "morse is still relevant." :-)

>That relevancy doesn't prove that such skills must be tested for a
>license. But to say those skills were not relevant is simply untrue.

Primus inter pares. ["first among equals"]

Sorry, but, right now, morsemanship MUST be tested for an
amateur radio license having below-30-MHz privileges.

"It's the LAW!" :-)

Law is relevant, is it not?

>> >Sure, the
>> >use of Morse code by non-amateur radio services has steadily decreased
>> >since the end of WW2. But to say it "wasn't relevant to the needs of
>> >the rest of the radio world of fifty years ago" simply doesn't mathc
>> >the facts.
>>
>> Well, little Jimmie WAS THERE, wasn't he? :-)
>
>You obviously weren't.

Sorry, little Jimmie, you didn't exist but I was already an adult
and working on HF fifty years ago. You were not there.

>Try writing plainly for a change.

The Cleveland Plain Dealer isn't hiring and they don't have
classes. :-)

>> >Yet Len insists on calling me a whole string of names he made up. He
>> >even went to the database to find out my last name. Is that the action

In present-day FCC regulations, there are NO specific
license exam question subjects, only a required total

number of questions per test element and a minimum
score of correct answers.

Thats good to know.

>> Any "reference" I provide is going to be ABOUT Amateurs from Amateur
>>Radio related sources.

Okay, but the definition of radio art does not depend on amateur radio. Radio amateurs, Hams, EEs, military, others may all use the term "radio art" and it will mean the same thing.

>> We are discussing (on occassion, anyway...) AMATEUR PRACTICE...Not
>>commercial, military or any other form of excitation of the ether.

<other snipped stuff>

There is no reason the definition of "radio art" should change for amateur practice.

> This newsgroup was created originally to discuss the US
> amateur radio license morse code test, to avoid over-
> burdening of rec.radio.amateur.misc newsgroup.

Morse code is one topic of policy. Policy may include other things besides Morse code.

Correction - the 1x2 was a "preferred" call. 1x3s were the
"regular" call signs issued until they started to run out in the
early '60s. Heck, when I was first licensed, my buddies were
getting the last of the W2s and I was "stuck" with a "non-preferred"
early K2. It's all relative.

I'm sure that at one time the 1x2 was a "regular" issue call sign.

>This all went out the door when the fcc got lazy and went to a whole bunch
>of new callsign blocks and refused to break into the new program and
>re-issue ANYTHING.

You are entitled to your opinion, of course, but it didn't take
into account the factual reason why the sequential call sign
system, as rigid as it was 'sposed to be, came about. It had
absolutely nothing to do with laziness and everything to do
with cleaning house and setting up safeguards after a call sign
selling scandal.

>
>That being said....from that point on (late 70s or so) a bunch of strange
>callsigns came about. Still having trouble with some of them...hi.

That's your problem, not the FCC's. Most of us don't have any
problem whatsoever recognizing "those" call signs as amateur call
signs.

>The concept of 'prefered calls' have been lost.

If that was true, the "vanity" program would not have found many
takers.

>Then the FCC in another stroke of insanity basically vacated the call
>districts that served a useful purpose.

It no longer served any useful purpose to the FCC and was therefore
relaxed. It still "lives" in the initial call sign assignment to a
new licensee, and one can still get a new "area" call sign when one
moves into another call sign area - it's a "check the box" option on
the modification application.

The relaxation that you decry was a very welcome move to those of us who wanted to retain our current call sign if or when moving from place to place.

You have my deepest sympathies if it makes your contesting or award-seeking more difficult.

>Basically what Im saying is its open season and I don't like it. But >neither do a lot of others, which means squat.

That's the bottom line, Dan.

Don't be so quick to dismiss the great significance of the Puerto Rican Novice... a true statistical aberration, if there ever was one. Indeed, if you peruse the FCC database, you will not find any other State/Psuedostate of the Union where Novices actually outnumber Generals(no others even come CLOSE)... In fact the Ns outnumber the Gs almost 2 to 1 in PR - whereas it is typically about a 1 to 5 ratio in other other place. Nowhere else is the Novice Class so important as "down there - thataway".

I would not put it past the Puerto Ricans to attempt to secede from the Union if the government even considered eliminating the Novice Class license... but that is another Civil War analogy better left for another day.

If a novice bothers to renew, he is just as likely to go to the trouble (not a lot of trouble, though) to upgrade to tech with code or to general. Novices can't do much on the air, and any interested in staying hams will likely upgrade.

Advanced's are less likely to upgrade, as they only lack a few hundred KHz of sub bands to play in.

Phil, I thought I heard on WLW last week that there's some idea of a bill that, concerning the filling out of government forms, that only the individual signing the form, or an attorney, is allowed to fill them out. I wonder where that would put tax preparers and VEC's if the "bill" should pass.

Have you heard any such noise?

Well, the FCC has issued suffixes like "Tango India Tango",
"Kilo zero charlie kilo" (the zero looks like an "O"),
"kilo lima one tango", and such. Though I doubt that
they'll let you have x# fox-trot uniform kilo or charlie. :-)

Len:

You've just been given bad advice. You ARE a "dumbed down Extra Lite" and have achieved your privileges under a licensing regime which is significantly reduced, compared to the one experienced by Pre-Restructuring Extras who were tested under a much more challenging and comprehensive set of requirements. Moreover, you have not been required to learn one of Amateur Radio's most practical, effective, efficient, and universal communications modes at a useful proficiency level (Morse/CW). You ARE an Extra Lite, and always will be, and you have the whining and complaining of lots of your fellow Extra Lites to thank for your newfound insignificance.

>> But some questions come to mind:
>>
>> 1. Any opinions about region? It seems like cheating to get a W3 call
>> when I live in 2-land.

Yes, it is cheating. Get a call sign which properly reflects the Call Sign District in which you actually live.

>Lots of folks do this as they can't get the desired prefix or suffix in
>their area. So common as NOT TO WORRY

Yes, I'd worry about it if I were you! These idiots with the out-of-district Vanity Call signs demonstrate nothing more than selfish self-interest and have no concern for how they appear to fellow amateurs on-the-air. It is just plain frustrating for a ham like myself, trying to complete a basic Worked All States award, to work a W2 and find out that he, like virtually every other W2 he's worked, has a QTH of Florida, Texas, or California! You can go a long way to

reducing the personal impact of your dumbed-down Extra Lite status by at least choosing a proper call sign with the right District number.

>> 2. What about waiting times? The FCC enforces a two-year wait, but it
>> feels a little tacky to ask for the call of a silent key who died only
>> two years ago.

>He won't know

If the SK ham's family hasn't bothered to claim that call sign within the two-year period, then it's there for the taking. If it's the call sign of a well-known ham in your local area, it would be simple courtesy to check with his club and/or family to make sure they have no plans to use it.

>> 3. Related to #2, is there a good way to find out about the previous
>> owner, especially if he died several years ago? It seems respectful to
>> at least get to know the fellow whose call you're inheriting.
>Once you get the new callsign -- check past Callbooks and ask a club near
>where he lived. Asking relatives may get a little dicey.

Asking relatives isn't the least bit dicey, and it would show proper respect for the deceased ham and his family to request their permission to use his call.

>> 4. Similarly to #3, it would seem like a nice idea to learn about the
>> general status of the previous owner. If W2ZZ was the best-loved old
>> fellow in all of 2-land, it doesn't seem like a great idea to go

>If you don't get it some one else will. Not to worry

However, it would be better for you to show the simple courtesy of inquiring of his family first, especially if they have other hams in the family.

>> 5. Is getting a 1x2 call just begging for harassment? A large part of
>> my interest in amateur radio is historical, so it seems like a natural
>> move. Can folks comment, especially from a historical perspective, on
>> the idea of getting a 1x2 or a 2x1 call, etc?

>Can't imagine someone harrassing you for a reassigned call. Ignore

That much is true. However, your Extra-Lite status can be easily determined by a simple check of QRZ.com, so don't try to pass yourself off as anything other than the dumbed-down Extra Lite that you truly are. If you are more than, say, 15 years old, you've had plenty of time to become a licensed amateur and upgrade to Extra under the Pre-Restructuring rules, so you have no excuse for waiting until the code and theory testing requirements were dropped to their present inconsequential levels. You may think that it's "not your fault" that you are a dumbed-down Extra Lite, but it is simply a fact of your life now, brought upon you as a result of lazy, dumbed-down people who wanted amateur radio privileges without being required to make the effort to meet the licensing requirements under the more comprehensive standards in place prior to April 15, 2000.

>While you are at it --- some suffixes are nice for CW -- others catchy on p
>hone. N2NY for new York. K2L? your initails. Good luck on getting a call
>with the suffix DX.

The only problem with 1x2's is there will be much less to choose from as opposed to 2x1's or 2x2's. However, if I were a dumbed-down Extra Lite, I'd probably just stick with my present call in order not to look like I'm trying to pass myself off as something I'm not!

Haven't heard. I'll check with a friend who is an EA.

If you approach those combos as obscene/profane/indecent, you
have bigger fixation problems than the choice of call sign.

The American fixation.

I won't attempt to speak for others but I've certainly never made a
claim about "worshipping at the altar of CW" and I don't recall seeing
others write anything like that. It looks as if your "facts" are in
error.

> >Some ops may prefer one
> >mode, and some may work multiple modes.

> Ahem...there's only ONE acceptible mode to the Three
> Morseketeers in here, the one that shows Mastery of Radio.
> Can you guess what that mode might be? [the familiar
> acronym can also stand for "conventional wisdom." :-)]

You keep getting your "facts" tangled up, Leonard H. I've stated on
several occasions that I use CW about half the time. Steve made a
similar comment about his operation just recently. As we've seen over
just the past few weeks, you aren't a guy to let facts stand in the way
of a good rant.

> In this newsgroup it's a Very Different condition. The Three
> Morseketeers (and their aging bus driver buddy, Dartisgone)
> keep commanding "IT'S THE LAW!!!" as if they are authorized
> amateur kops. :-)

I can look out a window and see rain. When I tell you, "It's raining",
that is not a command, it is a statement based in fact. When I tell

you, "You must pass a 5 wpm morse test for HF amateur radio access", it
isn't a command. It is a statement based in fact.

> Remember the old mantra, "CW gets through when nothing else
> will?" :-) Dates from the 1930s and the official pages of QST.
> Morsemanship is EVERYTHING about the radio expert to them.

Now that's a statement NOT based in fact. You've made up your "facts".

>

Don't blame someone else that you allowed several decades of "interest"
in amateur radio to pass without acting on that "interest". Your
expectation that radio amateurs should change for you is significant.

You aren't interested in becoming a ham, Len. Your interest is in
posting lengthy rants here.

> >If you've got an amateur radio license, use the privileges you have and have

No, you don't. You are too busy attempting to out-bray them and are far
too busy here to be involved in amateur radio.

> >I've got my HF privileges and rig set up now, but I

Laugh, Len. At this time, it is the only way into HF amateur radio.

> >Life's too short to not have as much fun as

> as a technical hobbyist. :-)

All this time and you still misunderstand. You have to pass a morse test and one or more written exams in order to become a radio amateur with HF privileges. A half century of commercial or governmental electronics, or of plumbing or of baking bread don't count toward an amateur radio license. Until you pass an exam for an amateur radio license, you are simply a spectator.

This wasn't an error. This was your cockiness writing checks that your
body couldn't cash.

> Don't you want to use that to damn me? :-)

We can just add it to the list.

> You PCTAs are an uncommunicative bunch who lack
> steerage way and a compass needle. :-)

Uncommunicative? You've been communicated to beat the band, Leonard.

> >That's right, Windy. The regulation sets the requirement. What is it
> >about that you don't understand?
>
> What is it about free speech and talking about changing laws
> that YOU don't understand, Herr Robust?

Not a single thing. You've had your say. My freedom of speech starts
when I call your ideas silly.

> You've either forgotten some US Constitution amendments or
> can't understand them. <shrug>

You seem to believe that freedom of speech extends only to yourself. If everyone would just agree with you, all would be peachy. You pretend to be all about "civil debate" in discussing an end to morse testing but you'd like us to forget that you want to see a minimum age for an amateur radio license. We're supposed to forget all your incivility. You reap what you sow.

Maybe you can be a part of the amateur radio "auxilliary".

Self-appointed alpha RF technophile, master of the non-sequitur and abuser of innocent emoticons, Mr. "Len Over 21" <lenover21@aol.com> wrote in message news:20030219180742.24452.00000015@mb-fw.aol.com...

> >Despite your ardent insistence to the contrary, Len, there is no "one" mode
> >of communication that epitomizes amateur radio. That's one of the things
> >that makes it interesting.
>
> Not in here... :-)

I actually listen to my radio to get an idea of what is interesting about AR. I don't use this NG as an example of what I was talking about because it is not AR, it's people talking about AR.

> Really? :-) "Weird noises?" Oh, my, you mean there are
> real "weird noises" out there? I haven't heard any "weird noises"
> for a long time since I can identify all of them as various modes
> carrying information.

I hope you didn't hurt your shoulder when you reached around to pat yourself on the back there, Len. I am sure these noises mean something to you, but being new to this myself, I am not currently aware of what information these noises carry. But I'm impressed that you are secure enough in your knowledge that you feel the need to point out a rather obvious fact without actually bothering to teach something at the same time. I would head down to my local community college to sign up for a course in Electronic Beep- and Boop-ology so that I could find out what all those weird noises are caused by, but it's really not that important to me right now. Kinda like not everyone who is interested in what causes migraines wants to become a neurologist.

> Ahem...there's only ONE acceptible mode to the Three
> Morseketeers in here

"Three Morseketeers"... clever. Is that original?

> I keep trying to point that out in here and the Three
> Morseketeers shout, holler, weep, and wave their sword
> hilts around when not waving their morsemanship plumes.

Do they really bother you that much, Len? If so, why? They cannot possibly interfere with your enjoyment of amateur radio, since you're not even licensed. Why do you let them bother you so? I thought you were superior to them by virtue of your being the self-appointed alpha RF technophile of the group, beyond and above anything the Morse users or other AR types could affront you with! Good lord, man, why don't you quit while you're ahead!

> Ah, yes, good old "international LAW." :-)

If you don't want to abide by the AR rules because you think they are foolish, that's your choice.

> Tsk, tsk, tsk.

Your tsk-tsking reminds me of my great aunt. She always did that clucking-hen thing whenever she disapproved of what people did. Sadly, my whole family hated her.

>What MIGHT be discussed in June in Geneva
> (WRC-03) is a total rewrite of all of S25, not just S25.5. Don't
> bank anything on that, it is a minor matter as far as ALL of
> this world's radio. Many, many, many items of non-amateur
> radio to take up by the administrations in summer Switzerland.

Fine, but I don't really care one way or the other what happens to the Morse test. Let it stay, let it go.

> What be this "vindication?"

Why, Len, you're being coy. It's so *cute* when you do that! Of course, the vindication I'm talking about is seeing come to pass that one issue that you so ardently try to advance in this very newsgroup. That thorn in your side. I won't bother to repeat it, for you've beaten it so far into the ground that it must be feeling hot by virtue of its being so close to the Earth's molten core by now.

>> In FCC 90-53 the FCC stated that
> it didn't consider a morse code test to be worthwhile for its
> task on determining any amateur applicant's qualifications for
> an amateur radio license. That was in 1990. 13 years ago.
> FCC said it again in NPRM 98-143. 5 years ago. The IARU
> took a position against the morse code test nearly 2 years ago.
> ARRL still hasn't made up its mind, won't take a stand either
> way (they say the speak for all US amateurs).

The ARRL does not nearly compromise all US amateurs, but they still have the loudest voice of any AR organization in the US. The content of the voices of its combined members is what is important.

> How soon is the "soon" you mention? :-)

Dunno. Who's waiting with baited breath for the outcome of the meetings in the Alps? Some prospective amateurs might be looking towards the outcome of this summer's convention and waiting for the Morse test to finally be pronounced DOA before they jump into the fray, but I'm more concerned about loss of frequency privileges to commercial interests myself.

> Remember the old mantra, "CW gets through when nothing else
> will?" :-) Dates from the 1930s and the official pages of QST.

I wasn't around in the 1930's. I was sixty years away from being born, in fact.

Seems like common sense to me that good radio operation and amateur practice comes with the attitude and skill of the operator, and not the modes in which they choose to work. I will maintain that it should not matter if you choose to work strictly CW or not, or whether you choose to use a mixed bag when communicating. Even Extra class ops can and do key out the f-word over and over again while jamming other people's conversations. Like that takes a lot of skill.

> >That certainly won't happen.

> Not a good statement. Nobody knows what will happen, despite
> what the Three Morseketeers "knowing what will happen."

Not a good statement? I said that outlawing CW won't happen. Who is going to outlaw the use of CW? Read what I wrote again.

> Is that like the Churchillian (?) statement "up with which I will
> not put?" :-)

I'm glad that at least your emoticons find your non-sequiturs amusing.

> The "attractiveness" has become less with age and the refusal
> of so many to adapt to change.

I was not around in 1930, Len, but I think there've been plenty of changes in amateur radio since then. You are perenially p.o.'d because they still make people take the Morse test to get a higher class license. Seems that this, and ONLY this issue is the one that keeps you away from the AR ranks. Otherwise, I could not imagine why you would spend so much time harping about the horrid CW on a newsgroup. If this ONE change were instituted in amateur radio, would you "all of a sudden" find it a useful and wonderful place to be? Gee, I'd hate to hinge all of my decisions to do or not do something on account of one particular point I didn't agree with.

Or maybe you really do get your jollies out of lording some imagined alpha-RF technophile status over us. I don't know.

> Some of the BDOFs do a
> bad parody of the famous closing scene of the film "Sunset
> Boulevard" (Gloria Swanson announcing she is ready for her

<whiplash segue>

... what??

> Ahem. One of the Three Morseketeers has already Given
> Orders (!) in here that interest-in-radio MUST be shown by
> a grant of an amateur radio license! No arguments allowed!

Well! In that case, I guess I'll send my license back to the FCC with the word "CANCEL" written over the face of it in LARGE BLACK LETTERS! As BLACK as those helicopters that are often found hovering over your abode, Len!!

> [must be some addictive property of cashew nuts...]

> grant but all the "ham experts" seem to recognize is that it
> makes a neat QRP rig. :-)

You are preaching to the choir, Len. While I will be the first to admit that I am not familiar with all of these innovations (yet), the above are perfect examples of the very innovations in AR I pointed out.

> Gosh! Really? How about the Corpse of Morseketeers who
> should "It's a SERVICE!" while waving their morsekets? :-)

Who cares?

> As you might have noticed, I do NOT let the jackass braying of
> the morseketeers "telling me what is fun!" :-) :-) :-)

From the frequency and ardency with which you do so, I am forced to conclude that "fun" for you must consist mostly of writing smug retorts and non-sequiturs to your perceived AR persecutors, followed by smiley emoticons ad nauseum.

> Oh, and I've had a commercial (first class, one test) license
> since 1956...47 years ago. That certificate sits in a safety
> deposit box since it isn't needed in retirement.

Oh! Damn! That hurt...

<Cue to slighty morose, violin-tinged music; Jackie slinks to her corner, wounded but only momentarily defeated>

<Cue dramatic, Oscar-worthy scream, "I AM NOT AN ANIMAL, I AM AN AMATEUR!">

Cripes, Len, get a grip. I'm not a professional radio engineer, nor do I aspire to be one. But that does not make me inferior to you. I don't care where or when you got your commercial license. I am just a little stumped as to why you feel above taking a simple test to receive an amateur license, despite the fact that everyone else, no matter how much they know, has to do the exact same thing.

Are you better than the rest of us, Len? Really, tell me what you think.

> One or the other of the Three Morseketeers keep reminding me that "it
isn't
> lawful for the amateur bands" over and over and over and over
> and over and over again. [gotta love it! :-)]

They really burn your butt, don't they.

> >As a human being that has reached adulthood, YOU get to decide what is
> >fun about your hobbies.
>
> I sort of came to that conclusion some time ago.... :-)

I still have a hard time seeing what's so "fun" about picking on people who have no sense of the future and whose attitudes run counter to yours. Cheap and easy targets, don't you think?

> That's nice. :-) I have a little familiarity with VHF...and UHF...
> and the microwave region...and MF...and LF...and VLF.

Since being on this newsgroup, I have a familiarity with BFM! *

> But, I MUST take a code test to "get on HF legally" (in the
> ham bands) because "It's the LAW!" Haw.

Haw! Sure you do! Just like I did. If it's important to you, you'll do it. Otherwise, you'll just sit in your pen and bray at the folks that're on the other side of the fence, where you wish you were. Oop! Damn, forgive me. In the world according to Len, WE are the ones who are inside the "pen", and Len exists OUTSIDE of it.

> Er, I don't think the Three Morseketeers and Dartisgone
> allow "fun" on a personal choice. All must do Their kind
> of "fun" or it is not "fun!" "It's a SERVICE!" "CW gets
> through when nothing else will!" Etc., etc., etc. :-)

They don't tell me what to do.

> One of the Three Morseketeers keeps insisting I must
> (no, MUST, all-caps imperative) take a morse test for an
> amateur radio license to properly show my "interest in
> radio!" That after a bit more than half a century of
> involvement professionally and militarily and avocationally
> as a technical hobbyist. :-)

That's just great, Len. Your half-century (no, HALF-CENTURY, all-caps imperative) experience in the technical aspects of RF technology are duly

noted. Now, I am very sure that you know a LOT more about radio than I do. I will not CLAIM to know more about radio than you do. However, this is a hobby/service (BOTH!) which has rules for obtaining a license. No one gets away with obtaining a license without abiding by the requirements for licensure and the rules; not even RF techs who know a LOT about radio, such as yourself. Brain surgeons, astronauts and other highly proficient technical types still have to abide by those rules. MENSA members would have to pass the same tests I did to get the privileges I have, Len. Now, I ask you, in all seriousness, what is it, BESIDES your smug refusal that you should be exempt from the rules that the rest of us must abide by, that keeps you out of amateur radio?

So far, all I can deduce from the substance of your postings is that you don't want to follow the rules to get an AR license, because you feel that the skills you amassed over many years should be enough to allow you to slide through to a hobby without doing what everyone else has to do to get into it. True?

Jackie

Judy Holliday was...but that's for another newsgroup.

This one is all about TNSG, CAP, State Department,
Bill Clinton and his dresses, and whose shirts are
stuffed the most, whose ego balloons are inflated
largest and more. :-)

Oh, yeah, and what the others say often -

"It's the LAW!" Right. Laws in force now cannot ever
be changed, cannot be talked about (absolutely never
by those without official authorized licenses!). Yup.

:-)

Geez, will you Three Morseketeers make up your collective
mind? :-)

To the Morseketeers everything negative said about morse
code is an "error" while everything positive is "fact?" Of
course. It must be the New Math or something... :-)

>You keep getting your "facts" tangled up, Leonard H. I've stated on

>of a good rant.

:-) Did you just raise the rant, lendlord? :-)

>I can look out a window and see rain.

Goodie, you have some eyesight. But, what if its just a
lawn sprinkler set on high? :-)

>When I tell you, "It's raining",
>that is not a command, it is a statement based in fact.

Of course. You will also say "the sky is blue, the grass is
green" and other colorful statements of fact while red in
the face. Go for it.

>When I tell
>you, "You must pass a 5 wpm morse test for HF amateur radio access", it
>isn't a command. It is a statement based in fact.

Ooooo! How about that?

Why MUST I pass a test at all? I was ON HF first a half
century ago...no "test" needed then...and I was perfectly
legal. [how about that?]

Now let's see what you can do with that thread opening... :-)

>Now that's a statement NOT based in fact. You've made up your "facts".

Ooooo. I'd call it satire or parody or just having fun unstuffing
some shirts, hearing ego balloons pop from a small needle.

>Don't blame someone else that you allowed several decades of "interest"
>in amateur radio to pass without acting on that "interest".

I have interest in my bank, too, but don't want to become a
banker. There, two facts, absolute truth. :-)

>Your
>expectation that radio amateurs should change for you is significant.

Would I expect the Three Morseketeers (and Dartisgone)
to "change?!?!?" Oh, my, no...not in a millennia....nobody
can tell them anything! :-)

>You aren't interested in becoming a ham, Len.

Ham is the butchered meat of swine. I don't want to be that.
:-)

I might, sometime, take an amateur radio test and change
from professional to amateur. Might be fun.

But, I've never been interested in jumping through hoops on
command of a bunch of control freaks who demand
dedication and committment to be shown to those freaks.

FCC writes radio regulations, not the ham control freaks.
I can argue federal regulations civilly, no problem. Problem
is all these stuffed shirts and ego balloons who think they
are such noble, splendid, role models who want to keep
things their way. <shrug>

>No, you don't. You are too busy attempting to out-bray them and are far
>too busy here to be involved in amateur radio.

Poor baby. Get both of your balloons popped?

>Laugh, Len. At this time, it is the only way into HF amateur radio.

Oooooo! "It's the LAW!" Ooooo!

>All this time and you still misunderstand. You have to pass a morse
>test and one or more written exams in order to become a radio amateur
>with HF privileges.

No kidding?

>A half century of commercial or governmental
>electronics, or of plumbing or of baking bread don't count toward an
>amateur radio license.

Oh? I'm just talking about regulations...and unstuffing some
shirts, popping balloons.

Did you know that amateur radio regulations can be CHANGED?

Really. "It's the LAW!" :-)

>Until you pass an exam for an amateur radio
>license, you are simply a spectator.

Okay. I'll look out the window for rain.

Nope. No rain. That's a fact!

Lets get to the chase. I just don't understand the present intolerance of "newbies" and their mistakes - intolerance to the point of some even publicly advocating a fundamental change in the license structure to deal with it. Every single ham since the very beginning of ham radio has made mistakes and didn't fully understand everything. And, for most of the last century (75+ years), experienced ham operators understood and tolerated this. I've seen nothing to even suggest this "problem" is any more common today, yet the tolerance and understanding of it is almost nonexistent with some of today's more experienced hams. As I see it, the real problem isn't with the "newbies" and their mistakes - it's with the intolerance and lack of understanding of it. Perhaps you, or Bill, can explain why I shouldn't see it that way.

> The concern for all this stems from the fact that
> violations of the type described above are much
> more common today than technical violations.

Mistakes and misunderstandings have ALWAYS been much more common than technical violations. Which have you made more of - mistakes or technical violations? What about you, Bill? Where, then, is the argument in this to support a change in the license structure?

FCC's been chronically underfunded for decades, and that's not gonna change
much. The best hope of more money for FCC, I think, would be for things that
would help 'homeland security' (like more monitoring and enforcement). Fancy
license structures just don't cut it in that environment.

>I know if I was the head of the organization and I was told
>to look for deep cuts, I'd be considering what could be done in the world of
>radio services.
>
Been that way a long time. Oddly enough, the situation may be changing on other
fronts, though.

A few years back, FCC "deregulated" the radio broadcast services, removing many
regulations so that "free market" forces would prevail, improving quality and
diversity through competition, yada yada yada. One of the biggest changes was
that companies were no longer limited as to how many radio stations they could
own, in total or in one market. End result was many sales and reformatting, and

a general homogenization of broadcast radio. Less quality, less diversity and less competition, not more. Now the chairman of the FCC, Michael Powell, may be rethinking the whole idea.

>re-issue ANYTHING.

I recall that happening in the late 1960s or early 1970s. FCC blamed their 1964-vintage computer system, which they said made it difficult to reassign calls. The non-reassignment rule was in effect in 1979 when I moved from NY to PA. One of the big reasons I kept my call was that if I'd given it up the FCC would not have reassigned it to anyone, meaning there'd be one less Extra with a 1x2 call. To me that was a bigger issue than being a 2 in 3-land.

In fact, for quite a while the FCC would not issue ANY 1x2 calls at all, even though some 1x2s beginning with N had never been issued.
>
>That being said....from that point on (late 70s or so) a bunch of strange
>callsigns came about. Still having trouble with some of them...hi.

Yeah, me too. 2x2 and 2x1 calls seemed "lopsided" or "front heavy" at first.

But it's been over a quarter century now. Not going back. If all of the present day callsigns which don't conform to the old system were dumped, a lot of hams would lose their short calls and have to take on 2x3s. I would not want to go back to my old call!

>don't you?
>
It must be remembered that the call sign district system goes back to the very
early days of amateur radio, before databases or even the FCC itself. Indeed,
it started with the 1912 rules that required licensing of all transmitting
stations.
>>
>> By REQUIRING hams to sign PORTABLE (district) made it much easier to
>> tell where the station was. Making it a lot easier for contest
>> operators and general ops by knowing which way to point the
>> beam...etc.

Also gave a good indication of propagation. Back when a 1000 mile contact was a
major accomplishment, this was an important feature.
>
>A good point for contesting, but I assure you the districting system was
>not created for the benefit of contesters. I'm still wondering why it

>was created at all. I suspect the original plan was to administer each
>district separately, but that either never happened or was abandoned
>early on.

Not really. For quite a few years ham callsigns were issued by the district,
not a central office. Radio licensing was going on for over 20 years before the
centralized FCC was even created.

btw, before WW2 there were only 9 districts (no 0 calls back then) and some
states were in two districts. After WW2, the current system was put in place.

>And of course, the FCC eventually abandoned the strict
>district system anyway since it proved to have little or no value.
>
The strict adherence of callsign-numeral-matches-geography was only abandoned
in the 1970s, and it was done at the request of hams.

The main reason for abandoning it was to avoid having to change callsigns when
moving from district to district. FCC and its predecessors used to try to
assign corresponding or similar calls when a ham moved, but as the number of
hams grew and the mobility of the US population increased, doing so became
unworkable. It was also an additional drain on FCC administrative resources.

I remember when you could reliably tell propagation by the calls that were
being heard. A small but significant advantage in the SS and other contests. I
notice that some stations make it really easy in SS by gettijg vanity calls
matching their section (guess where N2NNY is?)

So what it comes down to is the question of which is the lesser of two evils:
having callsigns that don't match the geographical location of a station, or
having to change callsigns every time a ham moved between districts?
Particularly if the new district has few or no similar callsigns available.

Yes, and it has been my experience that the type of mentality
which seeks out to have this type of call sign assigned to them is
almost always of the "CB mentality." Meaning, mentally, they
have never left 11 meters and bring all their CB habits and thinking
right along with them when they enter "Super CB" (ham radio).

My recommendation for a change in the license structure to only two classes was primarily to mitigate the incentive licensing issue. I believe having multiple classes above the beginner's class is non productive. You may disagree, but that's how I see it.

My comments about the new "learner's" class foucsing more on operating skill and less on the esoteric things was to hopefully reduce some of the dreadful stuff heard on the air these days.

I hope he is. This problem exists all throughout American society, not
just in broadcasting. Mergers and acquisitions are almost invariably
detrimental to customers. Unfortunately, customers have little voice in
such decisions whereas businesses generally get what they want.

Are we off topic or what?

Take a look at:
http://www.salon.com/tech/feature/2003/02/19/clear_channel_deregulation/index.html?x

Seems like the reality of broadcast radio deregulation doesn't match
the expectations.

Back in the '60s and '70s, FCC was micro-regulating the ARS. The trend
has been towards less and less regulation ever since. Yes, inadequate
budget is a big factor in that trend, but it's not the only factor.

Maybe in another 20 years...

2568. N8WWM BUSTED SAYS RAIN REPORT

Newsgroup: rec.radio.amateur.policy
Date: 2003-02-20 17:20:30 UTC
From: deckthehall@webtv.com
Message-ID: <dc1baa4a.0302200920.2171992a@posting.google.com>
Source record: 61750
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

N8WWM guilty of FCC violations. According to the FCC, N8WWM, Dog Adair committed several violations over the air at the expense of the Toledo Amateur Radio Club by utilizing their repeater to break the law. The amateur club received a warning letter from the FCC concerning Adair's violations and were told to take steps to make certain the violations by Adair will not be repeated. Adair not only hurt the entire image of amateur radio with his inexcusable behavior, but damaged the reputation of yet another entity trying to further the good of amateur radio. It's a shame when bad apples like these make it so clubs can't even trust their own users to abide by the rules they were sworn to uphold. Adair is also an infamous presence on the internet. A google search of "N8WWM" reveals a peek into the world of the individual identified as Adair. In addition to FCC violations, Adair has, in the past, been accused of being a prolific spammer, breaking several internet laws and violating several terms of service agreements with internet providers.

> alone. That was my first exposure to the amicable spirit of radio. :-D

Great story! Here's some of mine (you started this, Bert!).....

First experience with homebrew radio was building a "foxhole" set from instructions found in a thrift-store book, "All About Radio and Television". I was maybe 10 years old at the time. Had a six-foot scrap of multiconductor telephone-type cable, which was taken apart, ends stripped, and square-knotted together to get a 70 foot length that would stretch from the bedroom window to the crab apple tree in the back yard. Insulators? What insulators? The detector in the "foxhole" set was a single-edged razor blade and a piece of pencil lead (actually graphite), held in place by thumb tacks and a safety pin.

When I was about 12, my family went to an auction for some forgotten reason or other. I don't know what else was bought, but I went home with a J-37 key and what turned out to be the projects from an old NRI (remember them?) home-study course. Total cost: Less than a dollar. The projects were mostly built on nice aluminum chassis of various sizes, and there were a good assortment of tubes and parts in them. Over the next few months they were disassembled, and with a few small purchases at the local RESCO store, I had a 2 tube regenerative receiver for listening to the lower part of the HF spectrum. Also had parts from an old TV found on the trash, and the guidance of an old ARRL Handbook. Much redesign was needed to build the rx with the parts at hand, though. Coils wound on old pill bottles, tube sockets and bases for power connectors, etc.

Learning the code with that crude 2 tube regen was an experience in itself, because you needed one hand to keep the station tuned in while writing the code down with the other. Helped me learn to build better receivers, though!

Passed the Novice test in the early summer of 1967 at the ripe old age of 13 and built a 10 watt transmitter from other NRI parts. The old TV set provided the power supply. Only part I had to buy for the transmitter was the xtal. Tuned it up with a dial lamp in the antenna lead as RF indicator, plus the plate milliameter. Not a rock crusher but had a lot of fun. By that time the antenna had been upgraded to use "real antenna wire", those same glass insulators and went from the attic window to much higher up in the crab apple tree.

Total cost - maybe $14 for everything...You wanna talk about doing radio on a shoestring budget, you came to the right place!

Now here's the part that relates to the subject line:

All through this time, I was working with high voltages and dangerous tools like soldering irons and razor blades. (Still have some of the scars...;-))

Also climbing trees to put up antennas and such. Parental supervision? Bah!
The Feds saw fit to grant me the license and I didn't electrocute anyone nor burn the house down. Nor did my 10 watter bother any other

radio services. I knew and worked other hams who were younger than me, too.

But some folks would have denied us our licenses based on age alone. Odd, really odd.

Good point there. I would have really liked that. I had no instruction on the "how to" portion of Ham radio in the study/testing process. I learned everthing after I already had a license. Working in some ettiquite and proper QSO form would be a godsend.

Learning by listening on the air doesn't work very well with the aforementioned bad habits some hams have. I ended up listening to the more experienced hams at a QSO party for my initial experience. And we all know how good a technique is used for contesting!

In our area we have two AM stations broadcasting the exact same thing 24/7. This from stations about 8 miles apart as the crow flies. The third AM station mirrors the other two about 30 percent of the time. We have three AM's in our area, so if we listen to local AM, we have three to tune to, and almost zero choice.

Homogenization heck, we've got radio clones!

Still have the book? I made one from the very same book and later modified it with a store-bought diode. Until our local station went on the air, all I heard was WOWO in Fort Wayne, a pretty good haul from southern West Virginia.

There was a kid in our town who had a shortwave receiver and a pair of Part 15 walkie-talkies. By the time I met him, I was studying to become a ham. Talking to a kid a couple of blocks away on a walkie-talkie didn't hold much fascination. Maybe that's why I don't spend much time on two meter repeaters to this day.

My gear was store bought and used. Both the receiver and transmitter came from Allied's used equipment list. My deal with my dad was that I'd save the money for the receiver from my paper route and he and Mom would get me that transmitter for Christmas. I bought a Knight R-100 general coverage receiver and Pop ordered me a Knight T-60 transmitter a couple of weeks later. Oddly enough, when the new UPS delivery service driver brought the parcel from Allied, there was a Heath DX-40 inside. A note explained that they'd sold the T-60 and hoped that the DX-40 would be a suitable substitute.

Every tube in the DX-40 was broken in shipping but a trip to K8CFT's TV service shop yielded replacements (at no charge). A few days after I'd begun using the DX-40, another parcel from Allied arrived at our door. Inside was a Knight T-60. Allied had fouled up. My dad suggested that I try the T-60 and decide which one I wanted to keep. The DX-40 won,

hands down.

We didn't own an extension ladder and the old apple tree in the yard was only twenty or so feet high so my first antenna was quite low running from the tree to the house. K8CFT came to my rescue again. He stopped by the house with his service truck and a 40 foot extension ladder. We had a line of tall fir trees around the perimeter of the yard. Buzz installed an 80m dipole at what seemed to me to be extreme altitude.

> Now here's the part that relates to the subject line:
>
> All through this time, I was working with high voltages and dangerous
> tools like soldering irons and razor blades. (Still have some of the
> scars...;-))

There's nothing like having molten solder drip on your leg while you're wearing a pair of shorts! My scar is from an Exacto knife to the right thumb. A drunken doctor, on call at the local hospital, broke a needle off in the thumb before managing a few stitches.

> Also climbing trees to put up antennas and such. Parental supervision?
> Bah!

Trees are made to be climbed.

> The Feds saw fit to grant me the license and I didn't electrocute
> anyone nor burn the house down. Nor did my 10 watter bother any other
> radio services. I knew and worked other hams who were younger than me,
> too.

My mother was sure that I was GOING to burn the house down. Her opinion was reinforced the day we went to church and I left the DX-40 on standby. The entire house was filled with the melted tar smell of the potted power transformer when we returned (again K8CFT to the rescue with an old TV power transformer).

> But some folks would have denied us our licenses based on age alone.
> Odd, really odd.

Tougher test? "Lite" license? Big deal. Kinda like saying "I paid $500
for this VCR 20 years ago, so it's gotta be 'better' than the one you
just got for $100".

The important thing is what the licensee does after the license is
earned.

The funniest part is that the mere possession of an Advanced simply
proves the holder passed 5 wpm and the old writtens.

There may also be some sour grapes because the restructuring doesn't
give Advanceds any more credit towards Extra than a General.

Plus the leg-pulling factor.

>Go figure.

We don't have a collective mind. You must have skipped the part where I
wrote that I wouldn't attempt to speak for others.

> To the Morseketeers everything negative said about morse
> code is an "error" while everything positive is "fact?" Of
> course. It must be the New Math or something... :-)

That's one of your "way out there" statements. I note that you've
previously talked about the removal of morse testing. Now you're
writing of morse code itself. In fact, your recent rants include a line

about HF amateur radio being all about working DX on CW. Do you now
have a problem with use of the mode? With working DX?

> >You keep getting your "facts" tangled up, Leonard H. I've stated on

How about it? Like I said, it is a statement of fact.

> Why MUST I pass a test at all? I was ON HF first a half
> century ago...no "test" needed then...and I was perfectly
> legal. [how about that?]

The answer is simple: You don't have to pass a test if you don't want
an HF amateur license. That you were on HF fifty years back in the
military doesn't mean diddly toward obtaining an amateur radio license.

> Now let's see what you can do with that thread opening... :-)
>
> >Now that's a statement NOT based in fact. You've made up your "facts".

>
> Would I expect the Three Morseketeers (and Dartisgone)
> to "change?!?!?" Oh, my, no...not in a millennia....nobody
> can tell them anything! :-)

Somebody can. You can't. I have no obligation to accept your input on amateur radio matters. As far as I'm concerned, you aren't anything to amateur radio.

> >You aren't interested in becoming a ham, Len.
>
> Ham is the butchered meat of swine. I don't want to be that.
> :-)

Ham: An amateur radio operator.

You don't want to be that either.

> I might, sometime, take an amateur radio test and change
> from professional to amateur.

I'll wait in eager anticipation. How long do you think people live on average?

> Might be fun.

A couple of weeks ago you told us that it IS fun--as if you knew. That's funny coming from a non-participant and it is likely a puzzling statement to anyone reading your regular rants here. You don't write your stuff as if you believed that anything about amateur radio is "fun".

> But, I've never been interested in jumping through hoops on
> command of a bunch of control freaks who demand
> dedication and committment to be shown to those freaks.

Yeah, those damned control freaks at the FCC. They'll only have you in amateur radio on their terms unless you can convince them that the regs should be changed for your personal benefit.

> FCC writes radio regulations, not the ham control freaks.
> I can argue federal regulations civilly, no problem. Problem
> is all these stuffed shirts and ego balloons who think they
> are such noble, splendid, role models who want to keep
> things their way. <shrug>

Oh, I see. We should all be reasonable and do it your way, huh? Would it wound you if I point out that you haven't been observed to argue ANYTHING civilly?

> >No, you don't. You are too busy attempting to out-bray them and are far
> >too busy here to be involved in amateur radio.
>
> Poor baby. Get both of your balloons popped?

No, but I have a birthday at the end of the month. Maybe I get a chance then.
Keep up the braying.

> >Laugh, Len. At this time, it is the only way into HF amateur radio.
>
> Oooooo! "It's the LAW!" Ooooo!

That shouldn't surprise you. You're subject to the law in every other aspect of your life. You have only two small obstacles to overcome in your quest for an amateur radio license which permits HF access: 1) the law and 2) intertia.

> >All this time and you still misunderstand. You have to pass a morse
> >test and one or more written exams in order to become a radio amateur
> >with HF privileges.
>
> No kidding?

Absolutely. There are no exceptions for those who want the law changed or for those with fifty years of military or commercial experience.

> >A half century of commercial or governmental
> >electronics, or of plumbing or of baking bread don't count toward an
> >amateur radio license.
>
> Oh? I'm just talking about regulations...and unstuffing some
> shirts, popping balloons.

Then you just aren't doing a very good job of it.

> Did you know that amateur radio regulations can be CHANGED?
>
> Really. "It's the LAW!" :-)

A guy like yourself who has nothing but time on his hands--you can try to out wait the morse requirement. You'll still have to pass an exam. Inertia, kindly old fellow. Inertia.

> >Until you pass an exam for an amateur radio
> >license, you are simply a spectator.
>
> Okay. I'll look out the window for rain.

It makes about as much sense as anything else you've done toward obtaining a license.

> Nope. No rain. That's a fact!
>
> <pop...pop...>

With the sound effects you've provided, perhaps it's hail. It surely isn't pouring down amateur radio licenses.

Well, they could have taken the old extra test up to a year before April
15, 2000 and cashed the CSCE in on April 15, 2000 and have an extra.
I did something similar: Had the old style tech (general written and 5wpm).
Took the advanced and the extra writtens in Jan 2000. Got the CSCEs
and cashed them in on April 15, 2000 at a special VE event set up for
this purpose. And got the extra ticket a week later in the mail (The VEs
were quick to submit the paperwork, obviously).

Well, the above advanceds missed the boat.

From what I hear, the CBs are fighting back. They are sick and
tired of whiney geek hams complaining about CB radios on ebay,
now the CBs have turned the tables, doing like hams do, they are
complaining about ham radios on ebay. Childish hams who appoint

themselves as ebay policemen brought this on themselves. I think
its funny as hell. Law suits? Nope! You better go read ebay
rules. They reserve sole right to pull ads, anytime, for no reason.
Now, your assignment is to educate ebay personnel how to tell
what a CB radio is and what a ham radio is. Good Luck!
HA HA HA

Legal action? Come down from out
of your gum ball tree and catnip!

75% of the time that e-Bay has pulled Ham/CB/Radio auctions
it is for numerous complaints against the
Sellers for not shipping earlier auction
products won, non-payment of fees or fraud.

E-bay does not think ham radio
as some type of a special group worthy of
merited special attention - apart from the fact that
ham and CB related equipment sales usually are
in the top-5 categories for complaints of
Seller fraud filed to e-Bay from buyers.

Bottom line: When you bid on anything on E-Bay
be DAMM SURE your Seller is on the level and
IS NOT one of these (former) "traveling hamfest bum gypsies"
we used to see set up in the flea market at all the hamfests
trying to pass off the same overpriced non-working junk
to suckers or newbies. Many of em have abandoned the
"Hamfest Flea Market Circuit" and now sell exclusively on e-Bay

The above 2 auctions contain item types that I have seen for
sale at **NUMEROUS hamfests** in the past - and that
INCLUDED the DAYTON HAMVENTION. What's the difference
selling this stuff at Dayton....or on e-Bay ??

(none if you ask me - but I sure will not be the first one to place my bid
on saidsame items - JUST IGNORE THEM AND THEIR SALE
SIMPLE EH ? How difficult is that to do..???)

> >code is a waste of time for everyone, not just for you.
>
> It should not be tied to the higher licence class.

How would YOU structure the licenses, Vipul, given the following
facts:

1) Currently, all amateur privileges above 30 MHz are granted with a
Tech license that has no code test.

2) FCC says that the treaty requires a code test for any amatuer
license with HF/MF privileges.

Would you have the code test tied to the entry level license class? Or
would you limit VHF-UHF privileges?

Tell us how YOU would solve the problem and not violate the
constraints.

Really? Define "sequence priority" and "time priority" for us.

Much more simply: Learning to receive Morse code consists of learning
to associate certain sound or light patterns with the letters of the
alphabet, numerals and punctuation marks.
>
> It is this state of "time-priority" processing, when one can say they "learned"
> the code. This state is not achieved at 5wpm.

How do you know?

>(It is still a waste of time,
> however).

How do you know?

Koch and others showed that for most people the optimal way to learn
to receive Morse code is by hearing the characters at speeds in excess
of about 15 wpm, with exaggerated spaces between characters. The
characters are thus heard as "units of sound" rather than separate
sound. Similar to the way a child learning to understand speech does
not process a word like "cat" as "kuh.....ahhhh....tuh" but rather as
a single unit of sound.

>I have successfully learned another real-time encoding/decoding
> symbol set scheme, with Kinaesthetic processing (because I enjoy it).

In other words, you learned to talk and understand human speech.

> Once one
> reaches the state of time-priority processing, one cannot unlearn the code.

How do you know? Can you guarantee that nobody who has learned it has
ever forgotten it?
>
> After the changeover to time-priority processing, one may lose the ability of
> sequence priority processing. This is called "motor-memory".

Is that a bad thing?
>
> The end result is communication over a medium, which despite hypothetical
> scenarios, can be achieved by voice.

Not always.

Under some conditions, Morse will be usable for radio communications
when analog voice modes (AM, FM, SSB) using equivalent equipment
simply won't work.

> If you don't enjoy it, or find it
> relevant, don't learn it.

> Don't be pressured into it, just to satisfy some
> "requirement".

I think that's bad advice if someone wants to have an HF/MF amateur
license. Of course after WRC 2003 it may not be an issue anymore.

--

You say you're interested in "the technical aspect" and "homebrewing",
but I don't see you describing what it is you want to build.

All I can say is that they are idiots - because we will still know that from the "prior license class" data field. For the first 3.5 months of 2000, upgrading from advanced to extra has a relatively simple test (element 4B, as compared to the immediately prior test they had passed - element 4A), but after April 14, 2000, they would have to retake the hardest examination. Why more of them didn't upgrade then is a mystery, except for those who were completely inactive (yes, some of them exist).

There is a similar situation with the novice class, being that their written element credit (old element 2) was effectively cancelled: Take element 3A before, or retake the new element 2; either way become a Technician (w/HF), but doing it before would have the advantage of the license database actually showing the privilege.

I'm surprised that more people in these license classes didn't actually [try to] upgrade during the 3.5 month window in 2000.

Similarly, for those who have the "paper-only" upgrade to General because they were pre-March-1987 Technicians, why more of them DON'T at least ATTEMPT element 4 seems strange. As long as one has to pay the test/processing fee, one may as well TRY once. Believe it or not, the VE testing team I work with still sees an occasional paper upgrade even today (well, as of our January 2003 session) and we're only able to "twist the arm" of the candidate into trying element 4 about 20% of the time (and sometimes, they even pass too).

Except for the medical certificate (which actually shows up as a field entry in the FCC database) cheats, don't you really mean 13 wpm?

>There may also be some sour grapes because the restructuring doesn't
>give Advanceds any more credit towards Extra than a General.

But they DID have an advantage during the 3.5 month window in 2000 since element 4B was a much easier test. If they didn't take advantage of that, that's their own damn fault.

Neither am I.

Len demonstrates his logical processes by the above example. Some ham
named Jim with a 2-land call used a pejorative phrase 5 years ago, so
he thinks he's justified in tossing it at me. Four-year-olds see the
logical faults in that. ;-)

> Besides, you're the oldest guy here. If anyone

They're reasonably polite, and don't kill people. Otherwise, they're no better than any other humans, which is to say they're a very mixed bag. European culture takes a libertine attitude to sex, and folks who espouse it are espousing immorality.

I sense strong opposition....

>>> In FCC 90-53 the FCC stated that
>> it didn't consider a morse code test to be worthwhile for its
>> task on determining any amateur applicant's qualifications for
>> an amateur radio license. That was in 1990. 13 years ago.

Ancient history. Note, however, that FCC continued to require the 13 and 20 wpm
code tests until 2000.

Note also that despite the fact that FCC dropped all code test requirements for
the Technician license in February of 1991 (12 years ago), Len hasn't bothered
to get one. That tells you something about his interest in radio.

>> FCC said it again in NPRM 98-143. 5 years ago.

No, they didn't. They asked for input on the issue - no code test speeds were
proposed in the NPRM. In the R&O, which came out 3 years ago, FCC said that
code tests served "no regulatory purpose" other than meeting the requirements
of the treaty, and dropped all code testing except 5 wpm.

>> The IARU
>> took a position against the morse code test nearly 2 years ago.
>> ARRL still hasn't made up its mind, won't take a stand either
>> way (they say the speak for all US amateurs).

The actual ARRL BoD position is to neither oppose nor support removal of the
treaty changes.
>
>The ARRL does not nearly compromise all US amateurs, but they still have the
>loudest voice of any AR organization in the US. The content of the voices of
>its combined members is what is important.

And ARRL does not claim to speak for "all" US radio amateurs.

Very valid concerns.
>
>> Remember the old mantra, "CW gets through when nothing else
>> will?" :-) Dates from the 1930s and the official pages of QST.

I have every issue of QST from mid 1927 to this year, as well as many earlier issues. I cannot recall that particular quoted sentence ever appearing in QST. Perhaps Len can supply us with some issue and page numbers where that phrase supposedly occurs?

It is a fact, however, that under some conditions CW will get through when analog voice modes (AM, FM, SSB) simply won't.

>Seems like common sense to me that good radio operation and amateur practice
>comes with the attitude and skill of the operator, and not the modes in
>which they choose to work. I will maintain that it should not matter if you

>> A singular, elegant new innovation is the "Tayloe detector" by
>> Dan Tayloe.

N7VE - one of those 20 wpm Extra class hams with a 1x2 call that Len loves to bash so much.

In another post, Len describes him:

"There's an intermittent discussion going on in rec.radio.amateur.homebrew under the subject thread of "Barnstorming Ideas for a 40 Meter Rig." Several good things have been raised there and also slightly interrupted by Dan Tayloe plumping for his NorCal 30, featuring the Tayloe Mixer."

>> Only a terribly small percentage of today's US
>> radio amateurs would recognize it in its original form, a
>> switched commutating filter using a low-On-resistance, low-
>> noise CMOS IC.

Len has interviewed lots of hams and knows what they would and would not recognize, you see.

>> Dan Tayloe

N7VE

>> saw it where hardly anyone did
>> and got a US patent on it as a mixer. Well-deserved patent
>> grant but all the "ham experts" seem to recognize is that it
>> makes a neat QRP rig. :-)

Actually, it's a CW transceiver. According to his own account, N7VE was trying out ideas for a different kind of product detector, and the idea occurred to him. He developed it into a complete receiver, then into a CW transceiver of amazing simplicity, low cost, low current drain and high performance. Only a monoband design at this point, but the principles have all been demonstrated and a kit is available.

The amateur radio QRP folks use mostly CW, btw. They also do a lot of homebrewing and kitbuilding, often designing and building rigs from scratch in a short time just to try out an idea, circuit or component. The good performance of CW with low power and simple equipment makes it a natural combination.

Just think - a ham developed a new, patented, high performance mixer design while developing a QRP CW transceiver. Len doesn't want you to know this ;-)

Does all that mean a code test MUST stay? Of course not.
>

>From the frequency and ardency with which you do so, I am forced to conclude

Len ... welcome to ham radio from "Larry the (bigoted) Lecturer" ...
ham radio's "ambassador of goodwill and the true ham spirit" (NOT!)

Seriously ... don't let his "dumbed down Extra Lite" crap get to you.
I'm an RF engineer w/over 32 years experience and have been a
ham for over 25 years and Larry insults me, too ...

As my friend from the UK would say, "Tell him to piss off."

And, despite jerks like Larry, welcome to ham radio.

73,
--

This is highly unlikely on Usenet. The burden of proof rests with the person being libeled. Anyone can sign any name in a Usenet posting. Even if you prove that a post came from a certain computer via an IP address, you still have to prove that *that* *person* made the posting. The only way of defending would be to build a case against the poster if libelous postings continue. IOW, N8WWN should be patient and give the poster enough rope to hang themselves with

>
>Who sez?

Heh...that phrase "It's the LAW!" turns up from time to
time in here, written by several. It's the "turf" mentality
of the old-timers.

You, specifically, haven't written that, but others have. I'd
mention DejaNews but that is "defunct." :-) Google
bought out DejaNews. Google has most of the past
messages in newsgroups. Some of the regulars in here
virtually live there, virtual ego bruisings very painful,
demanding some sort of retribution or at least a chance
at more virtual combat. :-)

All laws are made by humans. Humans can also unmake
laws in a democratic-principle republic. The fact that a law
exists does not mean it is inviolate, never to be removed.
Those who feel comfortable and secure under a specific set
of laws dislike the thought of anyone changing that set so
they invoke the "It's the LAW!" hue and cry, hoping to
suppress dissenters (to their pet set of laws).

Some even go so far as to virtually claim ownership of an
activity, including the alleged authority to rule on who is
allowed to express opinions. They have no authority but
demand obeyance or they will meet the dissenters after
school is over and beat them up. :-)

All that about a hobby. :-)

SINgle Channel Ground Air Radio System is the standard US military small-unit RADIO; standard and operational for 14 years now. US Army Signal units are engaged in RADIO communications.

The former "commissioned officer" and "communications officer" of the Tennessee State Guard wasn't familiar with standard, operational radios of the US military or the USA National Guard units. Tsk, tsk, tsk.

Tsk, tsk, tsk, this is an amateur radio newsgroup, not some battleground over military honors. There are separate news-groups for those subjects.

A Presidential Unit Citation is not a medal or ribbon. It is awarded to a unit, stays with that unit as long as it is organized. For disputes over a Unit Citation, take arguments to the US Army Historical Center or the Adjutant General, United States Army.

>>Once awarded they stay with the unit.
>
> WITH the UNIT...The ONLY time the PERSON can "keep" the award as part of
>his/her heraldry is when that person was a member of a unit that was awarded
>the ribbon WHEN it was earned.

A Presidential Unit Citation is not a ribbon. Unit Citations are a part of the uniform of all unit members, the same as all identifying insignia of that unit.

> Now...Lennie...cough up the dates of those awards.

1954 and 1955. That was written before. Do you need Remedial English Comprehension classes? Contact your local school district's night-time extension class program.

>>> I read fine, Lennie. As for the adjective, I have asked you three
>>>different ways to tell us from what day to what day the PUC's to which you
>>>lay claim were awarded.

Repeat: This is an amateur radio newsgroup, not a military affairs administrative discussion venue. If you have a dispute with unit awards and citations of the US Army of the 1950s, contact the US Army Historical Center or the Adjutant General of the United States Army.

> So are your re-tellings of the ballad of the Fighting 71st, except, of
>course, when it's biting you on the butt.

The 71st Signal Service Battalion, 8235th Army Unit, Central
Command (Japan) was operationally attached to Far East
Command Headquarters, United States Army, beginning in
1946. In late1953 it was renamed Far East Command Signal
Service Battalion but retained the 8235th Army Unit designation.
The 8235th AU provided the entire signal communications for
the Far East Command Headquarters from the central Honshu
area of Japan. This continued until 1963 when all of the long-
distance HF communications facilities, including torn-tape
TTY relay and microwave inter-facility radio relay was
transferred to USAF control as part of downscaling US Army
forces in central Honshu. The USAF facilities were eliminated
in central Honshu in 1978 with land and buildings returned to
the Japanese government.

>>A Presidential Unit Citation is not some "soldier of the month"
>> thing. It is an honor bestowed on ALL members of the unit
>> receiving the award.
>
> IF they were a member of the unit during the period of time it was
>earned.

I was assigned to the 8235th AU from February 1953 to January
1956. The Presidential Unit Citations (two) were awarded to the
Battalion in 1954 and 1955.

Clearly there is some grasp of simple arithmetic situations which
seems common to PCTAs in here.

>> False. The entire Battalion received both Presidential Unit
>> Citations. We wore that proudly.
>
> W-h-a-t w-e-r-e t-h-e a-w-a-r-d p-e-r-i-o-d-s...?!?!?!

Those Unit Citations were awarded in 1954 and 1955. They
remained with the Battalion including the US Army Japan
forces reorganization which merged the 8235th AU and the
US Army Forces Far East Signal Battalion (old designation
72nd Signal Service Bn) with headquarters at Camp Zama,
near Yokohama. That merger was complete in 1957 with
the combined battalions renamed Japan Signal Service
Battalion. All previous battalion honors and awards were
carried into the new organization now of half-brigade size.

There were two more reorganizations of Signal Units in
Central Honshu after the movement of Far East Command
Headquarters to Fort Shafter, Hawaii. As stated, central
Honshu Army HF radio facilities were transferred to USAF
in 1963. The existing 78th Signal Service Battalion at Camp
Zama is the result of downsizing all central Honshu Army

Signal units and it is under the 516th Signal Brigade, US Army Pacific, Fort Shafter, Hawaii. The 78th at Zama has an HF radio division but that is one function, not a full division. HF radio serves the US Army as an auxilliary, back-up communications function while the primary is the DSN with fiber-optic cable and satellite microwave relay. The callsign of the old 71st was ADA and that is retained under an Army Regulation of 1995 for Headquarters, USARPAC. The left shoulder patch of the 78th Sig Svc Bn and other central Honshu US Army units is the stylized image of Mt. Fuji, the same as worn by US Army units in central Honshu since 1947.

There is no "cessation of awards" or "periods" for unit citations in the US Army. If a unit is disbanded, its citations remain kept in the US Army History Center along with a unit's full history. If a unit is disbanded, it will not have any members. If a unit is reactivated, honors and citations apply to the reactivated unit and its members. For complete details, administrative and otherwise, contact the US Army Historical Center. For disputes on awards, contact the Adjutant General, United States Army.

>>This is an amateur radio newsgroup...(SNIP)
>
> Then what are YOU doing here?

1. Trying to argue the subject of the elimination of the morse code test for an amateur radio license.

2. Trying to straighten out the disordered mentalities of BDOFs who want to talk about military matters and seven hostile action stories having no distinctive unit insignias.

>>For better mental health, contact your local psychiatrist and
>> get treatment.
>
> I might suggest the same for you, Lennie, in as much as you've
>demonstrated your penchant for pathological lying, profanity in a public
>forum, and obsessive-compulsive behaviour in a forum for persons for
>whom you have expressed great hatred and disgust for.
>
> Just my observations.

Heh heh heh...the delayed mirror syndrome. :-)

"Pathological lying?" No. I know considerable about RADIO and certainly that of my military service, that including the history before, during, and afterwards of service in my particular signal battalion. All of what I've explained may be verified from offcial sources. I do not state generalities such

as participation in "seven hostile actions" which are not explained in any detail, including dates and locations.

"Profanity in a public forum?" Hardly. Anyone can recall (without going to Google) who uses "putz" and "creep" and sexual references. That is little Stevie Robeson, aka Attilla the Ham...one who regularly, routinely insults all those who disagree with him and says he owes no one any apology for such actions.

"Obsessive-compulsive behavior?" Even without a U in 'behavior,' it is clear that the obsessive-compulsive action is on the part of Attilla the Ham, the defunct ex-NCO of the USMC.

"...against persons whom you've expressed great hatred and disgust for?" Hardly that. Someone posts, I reply. Others reply to that, I return reply. Still others post to the original. Sometimes a flame war erupts, sometimes not. Some are outraged to the point of desiring physical confrontation but most simply take it and move on. What is notable about the "delayed-mirror syndrome" exhibited by Attilla is that he has, publicly stated hatred and disgust for myself without apology in a most sociopathic demonstration (it is "justified" to his perverted standards) of ill will. Clearly Attilla demonstrates undesireable qualities and an almost absolute inability to get along with opposite opinions. The "pathology" of that may be observed in at least four years of his messages archived in Google. Anyone may go there and look for themselves...and find nearly ALL messages from ALL newsgroup message participants.

Amateur radio is just a hobby, an avocation involving radio for non-pecuniary reasons, supposedly a recreation. To some it becomes transcendant, almost metaphysical, into realms of myth, lore, and distinctive unit insignia on uniforms. A cult behavior far from the majority view of the hobby. :-)

Only one, a compulsive-obsessive wannabe ethnic cleanser
who is too far into the suds to make sense of anything but
military matters, uniforms, and distinctive unit insignia. :-)

>>> And I have "damned" only ONE veteran. That would be you. I still call
>>>you a liar and a coward. That's MY right under the Freedom of Speech"

...but not against civil law on libel and slander. :-)

That's the major reason AOL removed Attilla's libelous little
hate piece of a home page that lasted only two days before
being taken down by AOL, which also stripped you of that
particular screen name. Tsk, tsk, tsk.

> I reiterate the above.

Iteration after iteration will not make your lies truth.

> Still not taking the dare, Lennie?
>
> Probably because you are still a liar and a coward.

No. The "liar and coward" charge is an imaginary construct
of a sociopathic individual whose only aim in life is to fight
anyone not agreeing with him. They redefine justification into
impossible things attempting to rationalize their actions.

> You woke up as a putz. Spent the day as a putz. And you'll go to bed
>as a putz.

Ah...the "ER" thing again. Sad to say, not everyone survives being through any emergency room...except on television.

This isn't a newsgroup for medicine, doctors (you are not one), nurses, or heroic action figures claiming "seven hostile actions." That doesn't seem to stop the outpouring of virtual shouting, exhortations, commands against those not in agreement with you. Tsk, tsk, tsk.

>>Yes to people that only want their picture taken in uniform,
>> like the ones never smiling and showing teeth
>
> Like the one's you were showing in the nose of the A-26?

Well, there are several newsgroups concerned with broadcasting
per se. :-)

According to this week's national newspaper headlines, the focus
of the FCC is on telephony and those service providers. Of course
business is all about pecuniary interests...such as ARRL product
reseller company profits... :-)

Ah, poor Somolia Slim. Been waiting for something or the other in the way of ham radio for most of his adult
life, simply because he didn't have what it took to do otherwise.. Dunno what he waited on as a kid. Probably
adulthood, which seems to escaped him
Some of us just did it. Oh BTW, what makes you think anyone cares what you're waiting for? A dude who can't
understand "permission" wouldn't be likely to know how to go about properly applying. Then there's always the
matter of being first in line. And your own personal task of outfoxing the actuarial tables yourself.....

Seems Phil was right about your default mode. Should you ever want to rent a clue for a moment or two yer
buddy Putz will be eager to fix you up with a special deal. You'll have to call him on the landline, tho, he
doesn't have a ham radio license. Come to think of it, you still don't have much of one either. You sure do
generate a lot of QRN though.

> From what I hear, the CBs are fighting back.

Actually, no. According to what I heard (from an eBay employee), eBay was given a list of which radios were "easily modified to operate on frequencies outside the CB band" and are therefore questionable (read eBay's rules on electronic devices). This list included Uniden and Ranger radios like the ones mentioned ("HR2600s, HR2510s, RCIs"), resulting in these radio auctions being routinely removed when discovered.

Well, so far this week you've "dissed" veterans, nurses, bus drivers,
CBer's, Amateurs, volunteers, doctors and NOW you're "going ethnic".

Is there any possible indignity that you WON'T submit anyone to just
because it fits YOUR needs at the moment?

Hmmmmmmmm...? ? ? ?

Ahhhh, yes. Yet another item on the "Waiting for Lennie to Show Proof"
pile.

You keep making this insinuation that I said I was a doctor, Lennie, yet
have never provided a cite of a post wherein I said I was.

More lying. The days are getting longer again, and so is the list of
things you have yet again manufactured for your own satisfaction.

Shame, shame, shame......

Steve

> demand obeyance or they will meet the dissenters after
> school is over and beat them up. :-)

To state that I am a participant in amateur radio while you are not is
just the iteration of a fact and has not been construed by any others as
a statement of ownership of amateur radio. I don't demand anything of
you. You've been free to post your rants for quite a number of years.
I've been laughing at them for years.

> affairs administrative discussion venue. If you have a dispute
> with unit awards and citations of the US Army of the 1950s,
> contact the US Army Historical Center or the Adjutant
> General of the United States Army.

OK, Lennie...expect the worst next time you deviate even the slightest
from an Amateur Radio topic.

>> So are your re-tellings of the ballad of the Fighting 71st, except, of
>>course, when it's biting you on the butt.
>
> The 71st Signal Service Battalion, 8235th Army Unit...(SNIP)

BUT LOOKIE HERE! ! ! Lennie didn't go ONE paragraph befoe he let into yet
another "Back in the Fighting 71st" rants!

Sheeeeesh, Your Putziness! SO PREDICTABLE!

Chastise ME for discussing "military matters" in an Amateur Radio
newsgroup, then roll right into the exact same BS that you've already put over
a half million bytes of bandwidth in the trash can with.

PLEASE tell us what relevence thier transfer to the Air Force or thier
return to Japanese control had to do with Amateur Radio? What was so important

about that useless trivia to violate your OWN "rules" about newsgroup content
after having just chastised ME about teh same thing...???

>I was assigned to the 8235th AU...(SNIP)

Yes, yes yes, Lennie...We know.

Other than just a blanket "1954" and "1955" "date", you have not told me
the effective dates of the awards. For wht period of time were the awards
issued? For what specific achievement or event were they issued?

>> W-h-a-t w-e-r-e t-h-e a-w-a-r-d p-e-r-i-o-d-s...?!?!?!
>
> Those Unit Citations were awarded in 1954 and 1955.

You're oviously not getting the message. Never mind, Lennie.

>They
> remained with the Battalion including the US Army Japan
> forces reorganization which merged the 8235th AU and the...(SNIP)

More irrelevent "military matters" in an Amateur Radio newsgroup from the
NG moderator who chastises others for doing it...even in the same post!

>There were two more reorganizations of Signal Units in
> Central Honshu...(SNIP)

And even MORE of the same.

>There is no "cessation of awards" or "periods" for unit
> citations in the US Army.

Who said there was? And why are you discussing "military matters" in an
Amateur Radio newsgroup ig they are not germane, Lennie?

It's OK for YOU to chastise others, but also OK for you to ramble on for
hours on the units you used to belong to, locations, status, etc..?!?!

Or just more of the same two-faced, lying scum we've become accustomed to?

>1. Trying to argue the subject of the elimination of the morse
> code test for an amateur radio license.

No you're not. You're spamming the NG with "Why I Hate Amateur Radio"
rhetoric.

>2. Trying to straighten out the disordered mentalities of
> BDOFs who want to talk about military matters and
> seven hostile action stories having no distinctive unit
> insignias.

Oh? And WHAT "qualifies" your for this? Sleeping with some dubiously
qualified pseudo-shrink? Your three years of active Army service in the mid
FIFTIES?

Neither will get you that cup of overpriced coffee at Starbuck, Your Putziness.

>Amateur radio is just a hobby...(SNIP)

In YOUR opinion, Lennie. No such assertion exists in FCC regulations.

That you have lied a number of times has been demonstrated through a number of Google reposts and through offering the offering of urls and quotes from web pages which all disprove various claims made on a repeated basis by you. I would not be inclined to accept as truth, the statements of someone who has repeatedly told lies in the past.

When you've been nailed on some of your statements, you've gone to the beating-up-little-old-men defense on a couple of occasions. A little old piranha is still a piranha.

Sentences two and three of your statement above could easily apply to you.

"DO" apply, Dave!

Maybe we need to get Mrs. Lennie out of her self-induced coma and have her
instruct The Putzy One on the meanings of "pathological liar" and
"Obsessive-Compulsive Disorder".

Not that is would help, but at least we could say we tried.....

Please provide the links. That is totally opposite from accepted
practices and cases to date. Most cases involving libel are simply too hard
for the plaintive to prove. Sueing someone is one thing. Winning the suit is
totally another.

Somewhere. Doesn't matter, I memorized the plans long ago. 120 turns
#26 enameled on cardboard tube, white razor blade, safety pin,
graphite from a #2 pencil. High impedance phones, coupla nails and
thumbtacks, bit of wood for a base.

> I made one from the very same book and later

I knew kids who had those things. Good for maybe a 1000 feet with a
new battery. My little one-tuber would do thousands of times that
distance reliably.

If I'd had parnets like that I'd have been licensed years earlier. How
old were ya when the Novice license arrived? For me it was October 14,
1967.

> Oddly enough, when the new UPS delivery service

No surprise, the guy who bought the T-60 must sent it back!

I remember the Allied catalog and the T-60, T-150, R-55 and R-100. All
were way beyond my means, as were the coveted HR-10/DX-60 twins or the
2-C/2-NT favored by the ver rich. Turns out that was a good thing,
because except for the Drake those rx's were terrible.

DX-40 was a decent rig but that weird series-exciter thing was a bad
idea. Many hams have since converted them to economy power supply (TV
trans, again) and conventional B+.

> We didn't own an extension ladder and the old apple tree in the yard was

oh mama! I learned to climb the gingkos that surrounded the property
and put all sorts of wires aloft in the following years.

First non-homebrew ham gear I had was an AR-2/QF-1 combo ($20) and a
DX-20 (also $20, thank you W2FNT). Somewhere in there was a VF-1,
SX-99, Viking Adventurer, various Command sets, and of course serious
homebrewing.

HAW!!!

But it's been possible to get a ham license in the USA for over a
dozen years now with no code test at all.

I agree, as does Nancy, In fact one could use the excuse landshark did, it
was a co worker using a terminal from work. LOL. but hey you may have a
case against twisty, his incessant calling you a liar etc may be libelous
as well. he even made a new email address on account of you,
deckthehall@webtv.com

Try reading what he posted, Dave. He said he wasn't going to "do that
job for you." Sounds like plain English to me; what's your problem?

It matters! If you don't have yours, I have two. I'll send you one.

> > I made one from the very same book and later

Yep. You'd think with the Charleston, Oak Hill, Beckley and Huntington
stations in the "local" area, I'd have heard one of them. Instead, I
heard Fort Wayne, Indiana--even in the daytime. That all changed after
WMTD fired up right in town but it was a 1,000 watt daytimer so WOWO
took over at night.

Fourteen. The license was dated November 22, 1963. I turned fifteen
three months later. That was the beginning of my sophomore year of high
school.
Selling my dad wasn't easy. I was told that both ham radio and playing
the guitar were "kicks" and that all that stuff would be cluttering up a
closet after I'd lost interest. I ask him periodically if he thinks
I'll ever get tired of either one. He's now 78 and I'm pushing 54
really hard.

...and after comparing the insides of both, I could see why he would do
so. The T-60 was chintzy looking.

> I remember the Allied catalog and the T-60, T-150, R-55 and R-100. All
> were way beyond my means, as were the coveted HR-10/DX-60 twins or the

One of my pals locally had the Lafayette HE-30. It had better
bandspread tuning than my R-100 but the R-100's product detector and
Q-Multiplier could be used simultaneously. The biggest R-100 handicap
was the tuning rate. I wish I'd known enough to get a ham bands only
receiver. That would come later in the form of a Mosley CM-1, xtal
controlled front end, no RF stage (antenna to first mixer) and only five
tubes, all of them 6AW8A's.

> DX-40 was a decent rig but that weird series-exciter thing was a bad
> idea. Many hams have since converted them to economy power supply (TV
> trans, again) and conventional B+.

The DX-40's design also lead to a couple of OO reports of my 80m sigs
being 559 on 7.4 megs--not a good thing.

> > We didn't own an extension ladder and the old apple tree in the yard was

I'd pay someone before I'd climb a male gingko during the fruit-bearing
season.
Nothing stinks quite like Gingko fruit.

I had a DX-20 later while living in Miami. I still remember that iron
vane meter clunking against the peg.

> > > Now here's the part that relates to the subject line:

I'd at least hoped for a bullet to bite on. I received no local
anesthesia. I hurt myself with the knife less than the pain from
getting sewn up.

That just doesn't cut it if you have your heart set on HF ham radio and
you are faced with the enormous wall which a five word per minute morse
exam presents.

The pathological part kicked in again.

In one post, He's not George.

Here he is George with wife Nancy.

Hmmmm...

(I'm ready for the insult. LOL!)

Sam had been in business for 25 years and is finally sick of the
stress.

He quits his job and buys 50 acres of land near Athens, Alabama as far from
humanity as possible. Sam sees the postman once a week and gets no visitors.
After six months or so of almost total isolation, someone knocks on his
door. He opens it and there is a balding, obese man standing there.
"Name's Lloyd Davies, your neighbor from forty miles up the road... Having a
Christmas party Friday night... Thought you might like to come. About
5:00..."
"Great," says Sam, "after six months out here I'm ready to meet some
local folks. Thank you.
As Lloyd is leaving, he stops. "Gotta warn you... There's gonna be some
drinkin'."
"Not a problem," says Sam. "After 25 years in business, I can drink
with
the best of em."
Again, as he starts to leave, Lloyd stops. "More 'n' likely gonna be
some
fightin' too."
Sam says, "Well, I get along with people, I'll be alright. I'll be
there. Thanks again."
Once again Lloyd turns from the door. "I've seen some wild sex at these
parties, too."
"Now that's really not a problem," says Sam, laughing. "I've been all
alone for six months! I'll definitely be there. By the way, what should
I bring?"
Lloyd stops in the door again and says, "Whatever you want. Just gonna
be the two of us."

I'll say one thing about lloyd,

Lloyd Davies was the best sponge boy I ever had!

Medical waivers came about in 1990. The mere possession of an Advanced doesn't
prove that the holder passed 13 wpm - you need more info.

Yup. But the window of opportunity was much smaller - about 3.5 months (the
time between the R&O announcement and April 15).

>I did something similar: Had the old style tech (general written and 5wpm).

Lots of those "paperwork-only" VE sessions in April 2000 - a very good idea.
Fortunately your VEs were quick to submit, and missed the big backlog.
>
>Well, the above advanceds missed the boat.

All depends on whether you consider the new 50 question Extra (Element 4) to be
"harder" than than the old 40 question Extra (old Element 4B).

Of course one of the biggest unknowns in amateur radio demographics is just how
many ACTIVE hams there are. With 10 year license terms, a ham who loses
interest or dies can still show up on the database for years unless someone
takes action to cancel the license.

Mike:

As I've told everyone in here numerous times, I post here for three reasons -- to entertain and enlighten my readers, and to amuse myself. Some posts, such as the one in question, are quite sincere and accurately reflect my own thoughts and feelings without the least bit of ironic twist.
Post-Restructuring Extras ARE "dumbed-down Extra-Lites." We DID, in fact, go from a more challenging and comprehensive license testing system to one which is significantly simpler to prepare for and achieve a passing grade. It also de-emphasizes one of our most important communications skills, and, in fact, will totally eliminate same whenever S25.5 is finally voted out of existence.
I realize and acknowledge that the New World Order Extra Lites have no choice but to be subjected to the reduced status caused by the lowering of standards, but those who are old enough to have been licensed under Pre-Restructuring standards are held accountable for not upgrading prior to the change. Therefore, they must admit to and accept their reduced status among their fellow hams. The fact that we accept them as fellow hams is merely a convenience and a courtesy; their plebeian status is nevertheless in force. They are the vulgar proletariat of amateur radio, made that way by the whining of lazy knuckle-draggers who lusted after HF phone privileges, but couldn't muster the intellectual and moral capacity to learn and master a simple communications skill proven to be achievable by people of all ages and from all walks of life. They truly deserve the pity of their intellectual and moral superiors in amateur radio. We may have no choice but to allow them to circulate among us, and even communicate with them on-the-air, but they will have to accept the fact that any respect they receive must be earned by their showing us a willingness to become technically and operationally competent -- including mastering Morse/CW at a speed of at least 20 WPM.

But as I said, we know who has the waivers and who doesn't - because there is a
field in the FCC data that addresses whether or not one was issued.

>>> There may also be some sour grapes because the restructuring doesn't

Not necessarily. There may have been certain individuals who were working on
the code element and already had the written element credit in hand when the
ruling came out (though very few - doubtful if over 100).

>>I did something similar: Had the old style tech (general written and 5wpm).

I know of some April 15, 2000 sessions that didn't get processed until mid June
2000. It all depends on how each VEC stacked their piles of unprocessed work.

>>Well, the above advanceds missed the boat.

Incorrect. Mr. N2EY was waving his certificates in here well
before Shah entered the newsgroup. :-)

>And I'm interested in the technical aspect.

Yes, through "Electric Radio," a fanzine not for sale at
national newsstands or retail periodical outlets, of fan
interest to vacuum tube oriented hobbyists.

>> The exception is if you TRULY enjoy it.
>
>I didn't enjoy it until I learned it.

If Mr. N2EY learned it and enjoyed it, everyone must learn
it and enjoy it. Abundantly clear.

>>In that case, it
>> is not a waste of time. You may truly enjoy it,so it is not a waste of time
for
>> you. I do not truly enjoy Morse code.
>
>Then why not simply say it's not fun FOR YOU?

Why doesn't Mr. N2EY? :-)

>How would YOU structure the licenses, Vipul, given the following
>facts:
>
>1) Currently, all amateur privileges above 30 MHz are granted with a
>Tech license that has no code test.

That's already been explained by the FCC in Part 97, Title 47 CFR.

It does not require interpretation by Mr. N2EY.

>2) FCC says that the treaty requires a code test for any amatuer
>license with HF/MF privileges.

Error by omission. The FCC said in 1990 and again in 1999 that
a morse code test does NOT serve any purpose for them in
determining license qualifications for amateur radio. See FCC
90-53 and FCC 99-412.

The US Administration representatives to the ITU-R are obligated
to honor ITU-R Recommendations. That is all. The FCC made
mention of the "treaty" only to show why the morse test is
retained...otherwise the FCC just doesn't consider a morse test
worthwhile in determining qualifications for any amateur license.

Note: The FCC grants amateur licenses and ARRL is NOT part
of the US Administration that votes at WRCs.

>Would you have the code test tied to the entry level license class? Or
>would you limit VHF-UHF privileges?

Do you still beat your wife? :-)

>Tell us how YOU would solve the problem and not violate the
>constraints.

Mr. N2EY considers an international treaty "constraints?" :-)

>Whether the TEST is a necessary requirement is a different thing.

"It's the LAW!" :-)

The subject is the MORSE CODE TEST, not the entire written
test elements. Try to stay focussed.

>> Not for one who wants to increase technical skills
>> and does not enjoy Morse code.
>
>So how should the license structure be set up?

Mr. N2EY would probably want it exactly as ARRL wants it. :-)

>Give us some examples of courses that were irrelevant.

This is not an academic institution newsgroup. It is an
institution of amateurs. :-)

The FCC is not an academic institution and the amateur radio
license test is not an academic test.

>I still remember every course I took and every teacher in EE school.
>Some of the things I learned there I did not fully appreciate until
>years later.

...when you were working at that undisclosed location? :-)

>> There is not need to do the same thing to amateur radio.
>
>I'm beginning to understand why you dislike the code so much.

Everyone understands why Mr. N2EY *loves* morsemanship
so much. :-)

>How? Solve the problem I posted above.

What problem? There's a problem?

>You say you're interested in "the technical aspect" and "homebrewing",
>but I don't see you describing what it is you want to build.

I don't see Mr. N2EY describing his work in any detail. Isn't
he proud of his work? Why keep silent with so much pride?

That's really too bad. Law of unintended consequences. I liked Ed.

On the other hand, how many other people have been run off this group?
I don't see any litttle violins playing for them.

Larry, if you really care about Amateur Radio, the best thing you could do to improve it is tear up your license and take up some other hobby. Your kind are nothing but a detriment.

Does that "LT" in your callsign stand for "lite"? Just wondering.

Of course - but that requires additional information beyond "mere possession of
an Advanced". If we need additional info, then there's no reason to keep the
Advanced itself as proof of anything. Could just as easily look at the
"previous license class" field, or a pre-1990 license or Callbook page.

Or there's the ultimate test: show what skills and knowledge the ham has now.
There are probably hams who once-upon-a-time passed 20 wpm who would have a
hard time with 10 wpm today. And others who barely passed 5 wpm in the recent
past but who today cruise along at 40 per or better. Similar stuff with the
writtens.

AH0A lists expirations, renewals and grace-period renewals separately on his website. Some interesting trends - worth a look.

My money says if the FCC doesn't simply wipe out the license classes, the last Novice will disappear from the database before the last Advanced does.

Bill,

I agree with your analysis of how Larry could best improve ham radio.
His tirades against "lesser life forms" as he seems to view them are
certainly not the sort of "welcome wagon" to newcomers that makes
a good first impression ...

I would submit a couple of alternatives for Larry's "LT". How about:

Lacking Tolerance
Less Technical
Lid/Tyrant

I'm sure that others can think of other possibilities that also fit ...

Carl - wk3c

BTW ... my call was selected as "all American" with both W and K
in the prefix and C for the initial of my first name.

>school.

Shoot, you wuz old! I turned 13 in April of '67 and it took three months to go through the exam process (pass the code, wait 6-8 weeks for the written to show up at the volunteer examiner's house, pass the written, wait 6-8 weeks for the license to show up). And ya didn't know if ya failed the written until the FCC letter arrived.

>Selling my dad wasn't easy. I was told that both ham radio and playing

>so. The T-60 was chintzy looking.

Some of those old Novice rigs were not well designed, while others were amazingly good. Cost was not always a good indicator, either.

One thing those kits did was eliminate the financial advantages of homebrewing with new parts. Unless you could get some of the expensive components from sources other than Allied, Newark, or the local radio emporium, it was cheaper to buy a kit. Lookit the DX-20: $36 as a new kit. You'd spend that much for the power supply parts and chassis/cabint/hardware from Allied.
>

>controlled front end, no RF stage (antenna to first mixer) and only five
>tubes, all of them 6AW8A's.

Neat little rx, no selectivity but otherwise not bad. With a QF-1, almost a poor man's 2-B.

Best simple rx lashup for the effort and $$ from those days: BC-453 Command set preceded by homebrew xtal controlled converter. Discovered that idea about 1970, sold my SX-99 soon after. Surplus xtals permit covering 80 and 40, '453 has excellent stability, tuning rate and dial. My first converter was built on the chassis from an old AA5 BC rx - 12BA6 RF amp, 12BE6 mixer, 12AV6 xtal osc in the Pierce circuit. Tuned circuits were BC caps and coils wound on plastic pill bottles. No dipper - got really good at calculating coil dimensions and turns by pencil and paper. Only thing I had to buy were the '453 itself and the xtals.

Still have one of those lashups.

<more snippage>

Okay Larry.

If you were sincere, allow me to note what I think.

Aside from my physical problems that interfered somewhat with my Morse code takeup, the tests weren't that hard. Unless the earlier tests were many orders of magnitude harder, I'm still not impressed with how hard they were.

They were and always have been entry level tests, and to guage superiority by comparing one to the other is amusing. The tests are first grade stuff. If you want to fell superior to others based on what you did in first grade, well then go ahead.

I'll judge hams on what they did afterwards.

>
>
> Oh, for sure. (whispering) I really think its cuz their just getting
>cranky! (back to normal) Nice guys all, but they have this thing yaknow?

I prefer to think they are simply "not serious". Just like ol' Cecil, who swore
he'd never get an Extra...

>> The important thing is what the licensee does after the license is
>> earned.

> Absolutely. I'm having a ball learning more stuff.

Me too, even after 35+ years (32 of 'em as an Extra).

>> The funniest part is that the mere possession of an Advanced simply
>> proves the holder passed 5 wpm and the old writtens.

> Heh, not to hear them talk!

But it's true. Medical waivers and all that. Like I wrote, big deal,. Kinda
like saying "I paid $500 for this VCR 20 years ago, so it's gotta be 'better'
than the one you just got for $100".

>> There may also be some sour grapes because the restructuring doesn't
>> give Advanceds any more credit towards Extra than a General.

> Bingo! As we can see here in the group, there are still hams who are
>p****d off about that.

There are still folks p****d off about the incentive licensing changes of 35
years ago. There was even a proposal sent to the FCC to grandfather all hams
who held General, Conditional or Advanced back then to Extra. Good heavens...
>
>> Plus the leg-pulling factor.

> Well, they seemed pretty serious, and the joke is on them in hte end.

The best leg-pullers seem to be pretty serious. But after a while it's clear they're just trying to get people cranked up. Ask Len or Larry ;-)
>
>>>Go figure.

> Yeah.
>
I wonder how many Advanceds are still around today who got theirs back in "Class A" days, and saw the license class renamed, closed to new issues, reopened, and now reclosed. A 14 year old 1951 Class A would only be 66 today.....

>>lessee...who needs multiple screen names?
>
> Why does AOL make them available? :-)

So that different family members can use the same account yet retain different
email accounts and online identities. For some reason, you need multiple
identities to deal with ham radio. Could the reason be that you are afraid of
something? Sure seems like it.

You mean the order wire circuit which you claimed on numerous occasions
that I had originated--the one I corrected about repeatedly? That claim
of yours was pasted by a repost from the Google archives. Watch out for
those six-year-olds waving the straight keys around. You could get
hurt.

> I'll rank his radio expertise with those "seven hostile action"
> heroes.

What do you know about my radio expertise? How does it relate to your
position on a minimum age for radio amateurs?

> Forget sending those cashews. You're nuts.

I never planned to send you any cashews and never stated that I would do
so.
Which one of us is nuts?

It is tough to fill in the blanks on a supposed sentence which contains
only the same three words. Those three repeated words of yours have
about the same meaning as "Tree, tree, tree" or "Lift, lift, lift". If
you can't complete an idea, don't expect others to do it for you.

Sounds like you're describing someone who, when faced with strong opposition to
their rigid opinion, resorts to insults, ridicule, name-calling, factual
errors, ethnic/racial slurs, excessive emoticons and general infantile
behavior.

Fortunately, folks like that are relatively few on rrap. Many of us have
learned not to take them seriously.

3.947.4

Some blowhard is on there now saying that
there are "foreign Norwegian UN troops" in
the southwest USA or something.

The strange thing about this is I thought that on the
LN, they'all liked those blond haired-blue eyed
aryan type Norwegians! Why they bellyachin
about this? Would they rather have a chevy
van full or 30 mexicans in UN blues instead?

Same shit different weekend on 3.947.4 - OyVey!

Bill:

You see, right there is the difference between me and the liberal, whining Extra Lites. I'm not asking any of the Extra Lites to tear up their tickets and push off -- in fact, I am perfectly willing to "tolerate" their presence in ham radio. However, the Extra Lites and their apologists surely don't show any willingness to "tolerate" my opinions. I guess, as it usually is with liberals, it's a one-way street.

Definition of a Liberal: Someone who can tolerate anything except a difference of opinion. -- Rush Limbaugh

Carl:

It is not my need or desire to be a "welcome wagon" to ham radio's dumbed-
down, Welfare State "newcomers." If they get a ticket and get on the air,
fine -- they have a legal right to do so and I'm not here to stop them. Nobody
fell over backwards when I walked into my first radio club meeting with my
fresh new Novice ticket, and I had to show the initiative, motivation, and
persistence needed to gain acceptance on my own terms. Today's ham
radio "newcomers" want, and largely get, the Red Carpet Treatment, then
go on to spend the rest of their ham radio careers kerchunking away. Try
to get them involved in anything challenging from a technical or operational
standpoint, and they suddenly become wrapped up in family commitments,
or simply couldn't be bothered. It's been the same everywhere I've gone,
and I've been in a lot of places.

>
> - Mike KB3EIA -

Mike:

In a way, you helped me make my point. The Pre-Restructuring license
tests WERE "first-grade" stuff compared to what an experienced radio
amateur should know after even a few years of operating time. The problem
that I'm addressing is the fact that a lot of prospective Entry-Level hams
have been whining about the licensing requirements, particularly code
testing, in spite of the fact that compared to the knowledge required
of professional electronic communicators, they ARE quite basic. Anyone
with a rudimentary understanding of electronics could most likely get
a passing score on the "theory" simply by applying common sense.

I'm not really one tiny bit concerned about my "superiority" over any other
ham at any level. However, I and many others in this newsgroup have
had to endure over a decade of whining and complaining by people who
want full amateur privileges but are totally disinterested in learning and
developing simple, practical communications skills. Therefore, the
Extra Lites have to prove themselves to ME. Nobody else seems to
want to "judge" them, for the sake of political correctness, but I'm up to
the task!

That is because, unlike you, most hams consider ham radio for what
it is, a hobby, and have a life that isn't completely consumed by
ham radio and don't get hung up on some status thing about how the
testing was when they got their license.

Aw, poor thing having to put up with all that whining. You know
Larry, a newsgroup is sorta like a radio, if you don't like what
you hear change the frequency or turn it off. If you don't like
what you read in a newsgroup then find another group.

> Therefore, the
> Extra Lites have to prove themselves to ME.

No experienced ham, new ham, or prospective ham has to prove
ANYTHING to you, they don't even owe you the time of day.

'Taint so, Mike. Disturbs me a bit each time I hear that mantra regurgitated here. In fact the FCC examiner who administered my Extra told me at that time that the Extra written was generally acknowledged to be a tougher test than the First Phone - which I already had passed several years previously. And that examiner was the FCC's District Engineer for the Kansas City district. (Before some wag signs in insisting that District Engineers don't lower themselves to administering tests - that one did. He made a point of it. He was an Extra class ham himself and an EE to boot).

> The tests are
> >first grade stuff

I don't see any way that anyone could have ever made such a statement concerning the Extra class written I took in '69. There was a whole lot of quite advanced and involved radio theory that demanded considerable comprehensive learning of complex material. Definitely way beyond entry level. That you say it today seems to me to validate what Larry has to say on the subject- the tests truly ARE reduced severely in content and quality.

Seems worth saying one more time- If the Extra class is not going to mean anything, it's no more than a farce. What else could it be when everyone today wants to say the test for it means no more than the Novice test?

>
> >
> > I'll judge hams on what they did afterwards.

For some strange reason that refrain was NEVER heard before the late restructuring. Another point in favor of Larry's point of view.

Then we have geniuses like Slim Burke to offer up as genuine, current evidence.

Dick

Hmmm.. I passed the Extra in 1970 at the age of 16. Tougher than the First
Phone......

Next time somebody starts waving their First Phone around...

>Then we have geniuses like Slim Burke to offer up as genuine, current
>evidence.

Only if you take him seriously, which many of us don't. After all, he can't or
won't answer these simple questions about his alleged T5 operation:

What callsign was used?
What rigs and antennas were used?
Who did the equipment belong to?
What amateur bands and modes were used?
What countries and continents were worked?
How were the QSLs delivered?

Simple, straightforward questions, but you'll not see a simple, straightforward
answer to any of them.

Gee ... I thought we were supposed to welcome and "Elmer" newcomers,
not deride them ...

> If they get a ticket and get on the air, fine -- they have a legal right
to
> do so and I'm not here to stop them.

How benevolent of you ...

> Nobody fell over backwards when I walked into my first radio club meeting
> with my fresh new Novice ticket, and I had to show the initiative,
motivation,
> and persistence needed to gain acceptance on my own terms.

Oh, now I think I see what this is all about ... you got less than a totally
warm
welcome at your first ham club encounter and now you're intent on "sharing
the wealth."

Did you ever think maybe your attitude and personality had something to
do with it? (I think you should stop taking your own shortcomings out
on newbies ...)

> Today's ham
> radio "newcomers" want, and largely get, the Red Carpet Treatment,

I don't agree ... but I think that any new attendee at any ham club should
be treated as a welcome guest and welcomed to the fold ... not derided,
as you do so often, with "kunckle-dragging, lazy, low-life, welfare state,"

etc.

> then
> go on to spend the rest of their ham radio careers kerchunking away.

Another gross mischaracterization intended as a slur ... how typical for
you Larry ... I think the others are right ... you DO have a serious
self-esteem problem ... I'd encourage you to seek counseling to help
you overcome it so you can stop being so downright obnoxious to others
in your futile efforts to overcompensate.

> Try

Dick, you're supposed to be the biggest, baddest Extra with a
professional career in electronics, plus lots and lots of emergency
comms experience. Yet you can't seem to be able to get a radio to
work away from the power mains.

>Dick, you're supposed to be the biggest, baddest Extra with a
>professional career in electronics, plus lots and lots of emergency
>comms experience. Yet you can't seem to be able to get a radio to
>work away from the power mains.

I've been reading this thread, and frankly it is not amusing at
all. I've been licensed as KL7GPS for awhile and thought
amateur radio might be something to take up as a hobby now that
I'm retired (from a professional career in communications, which
included both commercial radiotelegraph and radiotelephone
licenses).

I haven't gotten around to putting together a rig to get on the
air, and this type of exchange is cause to question whether it
would be worth the bother.

It's a hobby folks. Those tests are *all* meaningless to anyone
who has worked in the field. Someone mentioned getting an Extra
Class at age 16 and that it was tougher than a 1st Phone. I had
a 1st Phone at age 16, but by age 20 I'd met at least a dozen
people who'd been to a 6 week school that taught that test, and
even though they didn't understand a bit of electronics, they
were just as legal (and frankly at least a useful to the boss)
for standing a transmitter watch as I was! I can't see either
the Extra test or the 1st Phone as significant... compared to
something like working in a modern telecommunications center.

As for code, the military could teach the average GI to read
code at 35 wpm, so I can't see much significance to that either,
except that it required time and dedication that nobody except a
GI just out of boot camp is likely to have once they reach age
18 or so.

I personally like that idea of an Elmer. It's a hobby, it is
supposed to be fun. And it is when people at various levels
get together and exchange ideas, help each other, and generally
do whatever part of it they are capable of enjoying.

I'd suggest the Larry and Dick dump the chip on the shoulder
routine.

Amateur Radio Newsline™ Report 1332 – February 21, 2003

Amateur Radio Newsline report number 1332 with a release date of Friday, February 21 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Snow causes outages in the East and ham radio comes to the reascue. Hear the details on Amateur Radio Newsline™ report number 1332 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: THE NORTH-EASTER OF 2003

Snow plowing crews struggled to clear roads and airport runways on Tuesday February 18th. This after one of the worst storms in decades buried parts of the United States eastern states in 2 to 4 feet of snow. And in some areas ham radio was called out as we hear in this report:

--
Snowdrifts were piled high from the Ohio Valley to New England, mudslides and floods wreaked havoc in the southern Appalachians, and layers of ice snapped trees and power lines. At least 47 deaths had been blamed on the storm since it charged out of the mid-West Plains states over the previous weekend. Schools were closed from West Virginia to Connecticut and more than 250,000 homes and businesses lost power and telephone service. Enter ham radio.

During the height of the storm on the 17th, two communications emergencies were declared by the Federal Communications Commission in conjunction with the ARRL. The first was in Virginia to protect amateur emergency communications on 3.947 and 7.243 Mhz -- plus or minus 3 Khz. Also included were 145.430 MHz and 146.880 MHz repeaters in Richmond, the 147.360 MHz machine near Chesterfield and the 146.760 Mhz repeater serving Williamsburg at times when each was handling emergency traffic. It was only in effect for a few hours and terminated at 19:00 hours UTC the same day.

The second communications emergency was declared for Kentucky. Former ARRL President George Wilson, W4OYI, lives in the city of Owensboro. He says that his area recieved about 2 inches of glare ice and quite a bit of sleet on top of it.

But the big problem was in Fayetteville near the city of Lexington. Again the problem was mainly ice related and radio amateurs were ordered to keep from using repeaters on 146.760 Mhz, 147.165 and 444.125, MHz unless they were specifically taking part in the handling of emergency traffic

Further to the North, Bob Josuwait, WA3PZO tells ARNewsline™ that Montgomery County in suburban Philadelphia Pennsylvania had about 20 inches of snow. Montgomery County RACES was activated at 1800 on Sunday, February 16 th.

Bob Lees, W3ZQN, is Montgomery County RACES Radio Officer. He reports that members with four wheel drive vehicles were told to help, as possible, by providing transportation for essential hospital and nursing home workers within the county.

The Radio Officer sent an alert via the pagers carried by over 50 members, convened a net on the county two meter repeater and began making phone calls to determine specific needs.
RACES responded or attempted to respond to 17 different requests for transportation services until about 10 P.M. local on February 17th. A total of 21 people were transported by six different drivers in their personal vehicles. Each vehicle was in constant contact with net control by radio as they traveled.

Lees says that six hams acted as net control stations from their homes. Another 14 who did not have four wheel drive vehicles checked into a net called at noon on February 17th. Each operator indicated that they were monitoring and could possibly help in other jobs if requested. In all it was a good job done by RACES and ARES in the face of one of the worst North-Easter’s of the past hundred years.

For the Amateur Radio Newsline, I’m Blair Alper, KA9SEQ.
--

For the region as a whole, it was the worst snowstorm since the blizzard of 1996. In that one at least 80 deaths were blamed on the weather.
(ARNewsline™, ARRL, WA3PZO, W4OYI, VHF Reflector, Repeater Owners Remailer, published news reports.)

**

INTRUDERS: DRUG RUNNERS ALONG THE VK COASTLINE

What appear to be illegal drug runners have taken to the ham bands along the Australian coastline. Q-News Graham Kemp, VK4BB and Chris Wright, VK2UW, have the latest details:

--

“14.044 daily at 08:30 U-S-B are "Big Voice" -- must be thee HQ Stn.. and "Low Voice" Supply Boat ?? On the 23rd January "Big Voice" was joined by another Big Voice -- signal 59+ -- also in the same direction...

The N.T.News carried an article about the "roadside drug distribution points in Western Australia. Maybe these two 'Big Voices' are running the distribution points and the 'smaller Voice' keeps up the supply to the Distributors ??

There was a video report on Darwin TV picturing an 'abandoned' Chinese Fishing Boat along the West Aust. Coast tied up to the Shore. No Crew and No Cargo. And there are some Indonesian Voices 'Hopping' in on the Frequency when it is not in use. Maybe they have a part to play in the business?

If my bearing of 250 degrees and VK6XW bearing of 360 degrees were used, they would cross in the vicinity of Broome.
--

According to Q-News, Australian hams are being encouraged to report anything they hear to the nations Intruder Watch Coordinator. (Q-News)

**

HAM RADIO IN SPACE: JAPAN ARISS CONTACT TO THE ISS

Ham radio contacts with the International Space Station continue. One of the latest took place on Tuesday February 18th when 8N3HES at the Hirano Elementary School in Kobe Japan succeeded in connecting its students with the ISS crew using Amateur Radio curcuits. One of the first questions answered had to do with ecology. How do you dump your garbage in space?

--
CONTACT AUDIO
--

That recording was made by JN1GKZ and you can only hear the I-S-S side of the contact. And some of the questions brought more information than many needed to know like when one student asked: “How do you take a bath in space?

--
CONTACT AUDIO HERE
--

This is the 3rd ARISS School contact with a school in Japan. To see a list of questions and herar all of the answers you only need to take your web browser over to the JN1GKZ website. You will find it at: http://www.qsl.net/jn1gkz/sound/ariss/8n3hes.htm (ARNewsline™ with sound from JN1GKZ))

ENFORCEMENT: PIRATES CANNOT EVER HOLD RADIO LICENSES

Pirate radio operators cannot ever get licenses to operate a legitimate radio station. So says a court of appeals. Amateur Radio Newsline’s Ken Locke, N8PJN, has more:

--

A United States appeals court has upheld as constitutional a law that bans a pirate broadcaster from ever obtaining a license for a low-power FM radio

station. In fact, it bars a current or former pirate broadcaster from even being involved with a station.

In its action, the full court reversed a ruling last year by a three-judge panel of a court that had struck the law down. By a 7 to 1 vote it ruled the law and the government regulations implementing it do not violate free speech rights under the First Amendment.

Back in 2001 Congress mandated that the FCC adopt rules to ban anyone who had been a pirate broadcaster or currently was broadcasting illegally from obtaining a license for a new low-power station. The appeals court appears to have taken this one step further in banning any affiliation bu current or former pirates with a legitimate FCC licensed broadcast operation.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN, reporting.

--

Thanks Ken. (FCC)

**

ENFORCEMENT: NO TWO METER SETS FOR HUNTING SEASON

The FCC has written to the manager of a Radio Shack store to warn against selling ham gear to unlicensed persons.

The letter went to Dennis Wilfong who manages the Radio Shack at the Valley point Shopping Center in Elkins West Virginia. In it the FCC says that it has information indicating that numerous individuals are purchasing Amateur radio Service Two-Meter radio units from that store for use during hunting season and the purchasers are using them without the required license.

But thats not all. The FCC says that those purchasing the radios are either not being told that the units require a license, or are being misinformed as to the licensing requirements.

The FCC tells Wilfong that he should advise purchasers of Amateur Radio transmitting equipment that unlicensed radio operation is a violation of Section 301 of the Communications Act. That using the transceivers without first obtaining an Amateur Service license may result in a monetary fine of $7,500 to $10,000. (FCC)

**

ENFORCEMENT: FLORIDA UPGRADE SET ASIDE

John S. Gregory, W3ATE, of Lake Worth Florida has had his General class upgrade set aside. This, based on complaints about the operation of his station on frequencies not authorized by his Technician class license.

According to the FCC, at various times in 2002 Gregory apparently checked into a net on 14.300 Mhz while still a Technician class license holder. He was issued two warning letters but the FCC says that both were returned as unclaimed. (FCC, W5YI Report)

**

ENFORCEMENT: FCC ISSUES A RASH OF FINES

Hams are not the only ones hearing from the FCC. The Commission is continuing to flex its enforcement muscle by issuing a number of monetary forfeitures. Here are some recent examples courtesy of the CGC Communicator:

How about $2,500 to a telephone company for failing to exhibit prescribed tower painting. Or $4,000 to a CATV operator for failing to retransmit the EAS required monthly test.

But those are small in compariason to a $10,000 fine issued to a communications operator for failing to exhibit prescribed obstruction lighting on its antenna structure. Another $10,000 was issued to to an FM pirate while a $15,000 fine was issued to to an AM radio station for failing to maintain operational E-A-S equipment, and for failing to enclose the station's antenna tower within an effective locked fence. The whole story is in cyberspacve at http://www.fcc.gov/Daily_Releases/Daily_Digest/2003/dd030204.ht (CGC Communicator)

**

RADIO POLITICS: ARRL TRYING AGAIN WITH SPECTRUM PROTECTION ACT

If at first you don’t succeed, try try again may be an old addage, but it applies in the case of te 2003 Amateur Radio Spectrum Protection Act. This is a bill that has been introduced in the US House of Representatives by Michael Bilirakis of Florida.

According to the ARRL. Bilirakis filed the latest version of the bill, HR 713, on February 12th. It has been referred to the House Committee on Energy and Commerce. Like its predecessor, HR 713 is aimed at ensuring the availability of spectrum to Amateur Radio operators. It would protect existing Amateur Radio spectrum against reallocations to or sharing with other services unless the FCC provides equivalent replacement spectrum elsewhere.

The previous version of the Spectrum Protection Act attracted more than 50 cosponsors. An effort will be made to encourage additional House members to sign onto HR 713 as cosponsors. Additional details are on the web at www.arrl.org. (ARRL)

**

RADIO LAW: HAM PETITIONS TO KEEP EQUIPMENT ASALES DATE ON FILE

Dale Reich, K8AD, of Seville Ohio, has petitioned the FCC to require sellers of two-way voice or data equipment to keep on file a buyer's name, address, telephone number and any future information. This, when selling a radio that required licensing under the current FCC rules.

Accordiong to an ARRL bulletin, the information collected would remain private, available only to the FCC or law enforcement. Reich said in his petition that any retail vendor would be able to ask local police for an investigation if the retailer suspected the radios were not going to be used in compliance with the

law.

Included in the petition is a requirement for "ownership and license tagging" for gear operating under Parts 5, 15, 18, 74, 80, 90, 95 and 97. In his petition, Reich said such tagging used to be an FCC requirement and that his proposed change was a needed tool for local law enforcement.

The full text of Reich's petitions is available on the FCC Web site. Search for petition number RM-1064. Comments are due no later than February 28th. (K8AD, ARRL Letter)

**

HAM RADIO ENTERTAINMENT: WRTC 2002 VIDEO NOW AVAILABLE IN THE USA

The World Radiosport Team Championship 2002 video had its United States premiere on Wednesday, February 5th. This, before a standing-room-only crowd in Washington state hosted by the Western Washington DX Club.

With photography by James Brooks, 9V1YC, and Dave Bell, W6AQ, the video covers WRTC 2002 from the perspective of a professional sporting event. The show begins with the arrival of competitors from more than 30 countries. It then takes the viewer behind the scenes for the various pre-competition activities and into the actual competition.

The video is available on VHS tape and DVD with extra material on the DVD. You can place your order on-line at http://home1.pacific.net.sg/~jamesb (WRTC)

**

CONVENTIONS AND CONFERENCES: SEVHFS IN HUNTSVILLE IN APRIL

If you have been trying to register on-line for the upcoming Southeastern VHF Society conference and getting a reply of no such website, try again. It will work the way its supposed to.

The problem was caused by an Internet Service Provider outage at the most inoportune time. The repair: Everything was moved to different server but that took a few days to accomplish. And now that its all back up and collecting bits and bytes in cyberspace, you will want to visit www.sevhfs.org for the latest conference update. This includes word that Steve Kostro, N2CEI of Down East Microwave Incorporated will be hosdting a surface mount soldering class on the opening Friday morning of the gathering.

The when and the where? This is the 7th Annual Southeastern VHF Conference. It is slated for April 25th and 26th at the Huntsville Marriott in Huntsville, Alabama. For further information and to register, visit that now up and running website at www.sevhfs.org. (SEVHFS)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our

RESCUE RADIO: THIS IS HDSCS

Last week Amateur Radio Newsline’s Joe Moell, K0OV told you that members of the Hospital Disaster Support Communications System of Orange County, California had been included in a new documentary series on the Discovery Channel. The show is called "Critical Rescue" and it aired on Thursday February 20th and on Saturday February 22nd. But what is the the Hospital Disaster Support Communications System or HDSCS and how does it work? Back with the answers is Joe Moell, K0OV:

--

HDSCS is a specialty group of ARES. It was formed in 1979 with the specific mission of providing backup communications that are critical to patient care. Since then, HDSCS has responded in 75 communications emergencies, ranging from single-hospital telephone system failures to area-wide disasters.

For its service, HDSCS has received awards and commendations from many hospitals and agencies, including FEMA. The most recent is the National Certificate of Merit from ARRL, awarded at the Board of Directors meeting in January 2003.

From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

For more about the Hospital Disaster Support Communications System of Orange County, California and information about how hams can best support hospitals, point your Web browser to www.hdscs.org. (ARNewsline™)

**

EMERGING TECHNOLOGY: RC-110 REPEATER CONTROLLER GOES OPEN SOURCE

How would you like to be able to customize a repeater controller your way? Well, according to Ken Arck, AH6LE, There has been considerable interest from folks wanting to customize their RC-110 repeater controllers. So Arck, who is both president and CTO of Arcom Communications says that he has decided to make the source code available to any ham who wishes to take a stab at 'hacking' it for their own use.

Writing to the Repeater Owners Reflector, Arck says that as far as he knows, no other repeater controller offers this open source archecture. Of course there are certain conditions, but they're pretty straightforward.

If you are interested in getting the source code, Arck says that you simply need to join RC-110 mail list. To do this send an e-mail to

rc110-subscribe@yahoogroups.com. The source is available in the files section of the list. More information is at Ken’s website – www.ah6le.net (Repeter Owners Remailer)

**

INTERNATIONAL – UK: REPEATER STOLEN

A repeater in the United Kingdom is off the air due to theft. According to the RSGB, the GB3NC two meter repeater and its site companion the GB3MCB 1296 MHz beacon have not been heard since someone made off with the equipment. Both were co-located in Cornwall and the RSGB says that its not known if either will ever come back on the air. (RSGB)

**

INTERNATIONAL: YUGOSLAVIA: THE NEW NATION OF SERBIA-MONTENEGRO

Yugoslavia has become Serbia-Montenegro. This, after Yugoslavia's parliament voted to formally abolish that nation and replace it with a new country called Serbia-Montenegro.

According to the ARRL Letter, the new arrangement will have little immediate impact on Amateur Radio. For D-X-C-C purposes, Serbia and Montenegro will be considered a single entity, at least for the time being. Also, amateurs there are expected to continue using Y-U and Y-T prefixes. (ARRL)

**

CONTESTING:: UT5UDX ON THE MOVE

Ukrainian international football player Sergei Rebrov, UT5UDX, who moved to England in a multi-million-dollar deal in 2000, has moved again. This time to Turkish side Fenerbahçe.

Word is that Rebrov has signed an 18-month loan deal with the Turkish club on January 28th. The Turkish club now has the right to buy him at the end of the loan period.

Rebrov is a High Frequency contest operator. He and has been very active as M0SDX from his home in the U-K and from other locations in the British Isles over the last two years. He is reportedly now in the process of obtaining a Turkish callsign. (RSGB)

**

DX

In D-X, GB2RS says that a group of Swedish amateurs will be active as JW slash SM0BSO, JW slash SM0LQB and JW slash SM1TDE from Svalbard through the 23rd of March. Activity will be on 160 through 6 meters on CW, SSB, RTTY and other digital modes. Q-S-L this one as directed on the air. (GB2RS)

And F5PAC is returning to Panama from the 23rd of February until the 24th of March. He will also operate from several Islands on the Air groups including

from the 25th to 27th of February. You can fopllow his exploits on the web at www.qsl.net/f5pac (Via e-mail)

**

THAT FINAL ITEM: EXTENDING MORE THAN A WELCOME

And finally this week, the story of a ham radio dream thats about to come true. Its also the story of what Amateur Radio is all about. Bruce Tennant, K6PZW, has the details:

--
Audio story only. Hear it at http://www.arnewsline.org
--

And after that, what else is there to say? (K6PZW)

**

It is not your difference of opinion that is intolerable or scorned here,
Larry. It is your intolerance of others who differ from and with you...

Perhaps one day you'll become human enough to understand that.

Floyd, they won't. They believe that they are better than the rest of us and their primary goal here is to let us all know it, so as to make sure we don't crawl out from under the rocks where they think we live. Better to just ignore their blatherings about "dumbed-down" tests and Extra-Lites, because they will never accept anyone who had to take an "easier" test than they did.

Jackie: He's been begging for someone to "prove theirself" to him ever since I found this newsgroup--probably before that. I envision Larry as a very lonely person because of it. But, he's too arrogant to get it... He also is under the delusion that those whom he attacks are truly offended or upset by him. That's the *real* joke...

Why he assumes anyone would want to waste their time doing so is really
funny.

Larry envisions himself as part of "real" ham radio. He's not. He is part of
the problem. His attitude, multiplied, will do more to keep prospective ops
out of the AR ranks than any of the tests themselves. I'm thankful for the
kind elmers I've met so far. Larry could use a lesson or two from them on
how to treat others, but I 'spect he's simply too arrogant to even consider
such a thing as being helpful instead of condescending to a new ham.

Don't let take this NG as a representative sample of what you'll encounter on
the air. It's not.
>
>It's a hobby folks. Those tests are *all* meaningless to anyone
>who has worked in the field. Someone mentioned getting an Extra
>Class at age 16 and that it was tougher than a 1st Phone.

That was me who got the Extra at 16. FCC office, 20 wpm send and receive, 2
years as an Advanced, secret tests, yada yada yada. Big deal, that was just one
accomplishment. Which was not unusual at all back then anyway, there were 12
year old Extras in those days. The "tougher than the First Phone" thing was a
quote from an FCC examiner.

>I had
>a 1st Phone at age 16, but by age 20 I'd met at least a dozen
>people who'd been to a 6 week school that taught that test, and
>even though they didn't understand a bit of electronics, they

>for standing a transmitter watch as I was! I can't see either
>the Extra test or the 1st Phone as significant... compared to
>something like working in a modern telecommunications center.

I went on to EE school at age 18, and discovered that amateur radio background
was a big help in EE. But it was only a beginning - there was a lot more to
learn, of course. Radio is but a small part of electrical engineering.
>
>As for code, the military could teach the average GI to read
>code at 35 wpm, so I can't see much significance to that either,
>except that it required time and dedication that nobody except a
>GI just out of boot camp is likely to have once they reach age
>18 or so.

The "toughest" code test ever required for a US ham license was 20 wpm plain language, needing one minute solid copy out of five minutes. By professional or serious amateur standards, that's not very much skill at all, compared to what is expected in the real world. Such tests are all gone, anyway.
>
>I personally like that idea of an Elmer. It's a hobby, it is
>*supposed* to be fun. And it is when people at various levels
>get together and exchange ideas, help each other, and generally

Which goes on all over the place. Try reading the Elecraft or Glowbug reflectors - all sorts of folks helping each other out with information, experience, parts sources, etc.
>
>I'd suggest the Larry and Dick dump the chip on the shoulder
>routine.
>
Let's say, just for the point of argument, that those old tests really were tougher/more comprehensive/whatever than today's tests. (There's no really objective way to tell, because we don't have the old tests available for comparison anyway!)

We still have the following situations:

- It's not the "fault" of new hams that today's tests and test methods are not like the old ones.

- Both the old and new tests were not comprehensive EE-level exams, but rather a compilation of things FCC thought to be important for licensees to know. That's true for both the commercial and amateur exams

- (This one's the biggie) There's little chance we'll go back to the old way of taking the exams. We're pretty much stuck with the VE system, so we might as well make the best of it.

I have no problem with your viewpoint. I reject your characterization,
though: I am not now, nor ever have been, a whiner. I plan to take the
extra exam, but that's only because it's the highest one they offer.

Here's a thought: If the FCC won't make tougher tests mandatory, maybe
the ARRL should offer voluntary "certifications". They give out
wallpaper to people who work all states, etc.; why can't they give out
some wallpaper to people who voluntarily sit for an examination on
theory, deeper theory, and super-duper tough theory? Or who
demonstrate the ability to build a rig starting with two busted TVs
and a roll of tin-foil?

Then if they did that, you and I could have a show-down. :-)

Actually I highly suspect that what they "know" is that they are
not as good as the rest of us. The root of that type of
behavior is almost always a huge inferiority complex. They need
to find a way to set up artificially absurd distinctions to set
themselves apart from others because they can't find any sense
of accomplishment in what they actually do on a day to day
basis. The distinctions have to be emphasized by insults
directed at others who approach the phony line they've drawn in
the sand, otherwise they cannot view themselves as having any
value.

Going through life thinking you have no value is not a picnic,
and I do feel sorry for them.

Floyd, it really wasn't meant to be. I put "smiley's" when I aim to
amuse.

I've been licensed as KL7GPS for awhile and thought
> amateur radio might be something to take up as a hobby now that
> I'm retired (from a professional career in communications, which
> included both commercial radiotelegraph and radiotelephone
> licenses).

You've picked a fine hobby. Assuming you're in Alaska, you'll never
want for a QSO.

> I haven't gotten around to putting together a rig to get on the
> air, and this type of exchange is cause to question whether it
> would be worth the bother.

Unless you live in a restricted development (like much of America),
you should Get On The Air Immediately, and ignore us "netgroup
whiners" completely. Seriously. We'll do nothing but drag you down.

> It's a hobby folks.

Yet it can be useful for emergency communications.

Those tests are *all* meaningless to anyone
> who has worked in the field.

Many of the Extras on here, whom most of work in the field as
electronics engineers, want the rest of us to learn everything to

their level of professional detail, without getting paid a handsome salary for the effort. They really do want something for nothing.

Someone mentioned getting an Extra
> Class at age 16 and that it was tougher than a 1st Phone. I had
> a 1st Phone at age 16, but by age 20 I'd met at least a dozen
> people who'd been to a 6 week school that taught that test, and

> for standing a transmitter watch as I was! I can't see either
> the Extra test or the 1st Phone as significant... compared to
> something like working in a modern telecommunications center.

Which is why I think one license, "Amateur," is a sufficient license for all of amateur radio (unless we want to include a learners/beginners license).

> As for code, the military could teach the average GI to read
> code at 35 wpm, so I can't see much significance to that either,
> except that it required time and dedication that nobody except a
> GI just out of boot camp is likely to have once they reach age
> 18 or so.

I think that many, many recruits became Cooks and MPs after the 1st week of ditty-bopper school.

But suppose they made it. Then getting the old Extra at 20 words per was a walk in the park, w/o much career electronics knowledge.

These are many of the guys that have come on here telling the rest of us how lazy we are when we max out at 10wpm, or don't get it at all. They forgot about all the cooks that fed them all the years they were ditty-boppers.

> I personally like that idea of an Elmer.

I love that idea. And I think if the OFs on here had a more nurturing attitude... instead of nothing but "slam-dunks."

They call everyone that isn't CW oriented stupid cb-plussers, the exams we took are "dumbed down," we're lazy knuckle draggers with 4-land accents, hands out, ...

It's a hobby, it is
> *supposed* to be fun. And it is when people at various levels
> get together and exchange ideas, help each other, and generally
> do whatever part of it they are capable of enjoying.

True words.

> I'd suggest the Larry and Dick dump the chip on the shoulder
> routine.

The problem isn't confined to r.r.a.policy. Have you followed the similar exchanges on r.r.a.Antennas? It would appear to take at least one Extra to have a really vicious argument. Most are old 20wpm Extras, so much for the riff-raff filter.

You should have seen them on here, fawning over Val, a newcomer who came on here with an instant love of Code, and unkind words for those that don't or won't worship the Code.

I'm afraid the only corrective action are the unforgiving actuarial tables, where they will take their attitudes, bile, and "tough love Elmering" to their graves.

Floyd,

WELL SAID!!!

Unfortunately there are a minority of hams that are on their
own ego trip and apparently need to think they have special
credentials that make them better than others.

Bottom line, I don't give a hoot what anyone's license is. It
is what they do as hams that count in my view.

Cheers,
Bill K2UNK

Actually, that was the kicker. (no pun intended.) We went from a range of
only a couple of blocks to being able to reach one or two towns over. More
recently, my niece and I were able to copy each other over approx. 15 mi.,
albeit w/greatly elevated antennas. (Using the Morse feature only, no
voice.)

And that is especially true for all those generals that ONLY had to study
and pass a written test since there was NO higher code test associated
with becoming an Advanced fro a General.

The correct RM # is RM-10641

Someone else previously posted:
RADIO LAW: HAM PETITIONS TO KEEP EQUIPMENT AND
SALES DATE ON FILE

Dale Reich, K8AD, of Seville Ohio, has petitioned the FCC to require
sellers of two-way voice or data equipment to keep on file a buyer's
name, address, telephone number and any future information.
This, when selling a radio that
required licensing under the current FCC rules.

Accordiong to an ARRL bulletin, the information collected
would remain private, available only to the FCC or law enforcement.
Reich said in his petition that any retail vendor would be able to ask
local police for an investigation if the retailer suspected the radios
were not going to be used in compliance with the law.

Included in the petition is a requirement for "ownership and license
tagging" for gear operating under Parts 5, 15, 18, 74, 80, 90,
95 and 97. In his petition, Reich said such tagging used to be
an FCC requirement and that his
proposed change was a needed tool for local law enforcement.

The full text of Reich's petitions is available on the FCC Web site. Search
for petition number RM-1064. (Coorection - It's RM-10641)

Comments are due no later than February 28th.

Since when has investigation of purchase and possession of radio
ewuipment which has not been stolen been a function of local law
enforcement? It's bad enough that the Feingold Bill (now law) gave
them permission to investigate unlicensed "CB" -operation-.

>In his petition, Reich said such tagging used to be an FCC
>requirement and that his proposed change was a needed tool for local
>law enforcement.

Needed by -whom- ? Certainly not local law enforcement which has a
full plate and not enough funds to do it right at present.

>I went on to EE school at age 18, and discovered that amateur radio
>background was a big help in EE. But it was only a beginning - there
>was a lot more to learn, of course. Radio is but a small part of
>electrical engineering.

I found the same thing - I got my first ham and commercial licebnses
a year before I entered engineering school and I founf that I could
"ace" the electronics courses and be a mentor to some of my classmates
very easily, but the "power" courses - generation, transmission,
distribution, and machine design and application - were the ones
that I had to put some work into.

Forty plus years later, not working in design in either field, I
remember the "power engineering" stuff very well - it helps that my
wife is a pro in the power utility engineering field and talks about
her work quite often to keep me current. I've had continuing "hands
on" professional experience in modern wire and radio communications
which keeps me current in the "electronics" part of electrical
engineering.

But the secret is the -interest- that I have in the field, whether
I'm paid for it or not.

>>You were the one who started waving degrees around.
>
> Incorrect. Mr. N2EY was waving his certificates in here well
> before Shah entered the newsgroup.

Sorry Lennie. Jim's correct (again). Your "degree waving" predates him
by quite a bit. Google refers.

>>How would YOU structure the licenses, Vipul, given the following
>>facts:
>>
>>1) Currently, all amateur privileges above 30 MHz are granted with a
>>Tech license that has no code test.
>
> That's already been explained by the FCC in Part 97, Title 47 CFR.
>
> It does not require interpretation by Mr. N2EY.

Well, I guess it was bound to happen that Lennie the Liar started
answering questions put to Vippy the Vacillitating, however without really
answering the question put to him in the first place.

>>2) FCC says that the treaty requires a code test for any amatuer
>>license with HF/MF privileges.
>
> Error by omission. The FCC said in 1990 and again in 1999 that
> a morse code test does NOT serve any purpose for them in
> determining license qualifications for amateur radio. See FCC
> 90-53 and FCC 99-412.

What "omission", Your Scumminess?

Regardless of what the FCC has stated thier opinion is on the need for
code testiong, they have also staed that they will honor the treaty.

No omission. It's a fact.

>Note: The FCC grants amateur licenses and ARRL is NOT part
> of the US Administration that votes at WRCs.

What part of Jim's statement was this meant to address, Lennie? He didn't
address it, so why did you feel compelled to say this?

> Do you still beat your wife?

Do you still sleep with yours?

>>Tell us how YOU would solve the problem and not violate the
>>constraints.
>
> Mr. N2EY considers an international treaty "constraints?"

Why not, Your Putziness? YOU do.

>>Whether the TEST is a necessary requirement is a different thing.
>
> "It's the LAW!"

Well Mr Sworn Defender Of The Flag And Rear Area Radio Hero, WHAT PART of obeying the law do YOU have a problem with?

>The subject is the MORSE CODE TEST, not the entire written
> test elements. Try to stay focussed.

The subject is AMATEUR RADIO POLICY, Lennie. A subject in which you repeatedly demonstrate a state of confusion about.

Of course if you were a licensed, ACTIVE Amateur Radio operator you might have SOME understanding of what youa re TRYING to talk about.

>Mr. N2EY would probably want it exactly as ARRL wants it.

I sure would like to see from which one of Jim's posts you glraned that one, Your Lameness.

>>Give us some examples of courses that were irrelevant.
>
> This is not an academic institution newsgroup. It is an
> institution of amateurs

Lennie-to-English translation: "Uh-oh...How do I duck out of this one?"

>The FCC is not an academic institution and the amateur radio
> license test is not an academic test

But as demonstrated before (with references to established secondary education facilities within spitting distance of Lennie's hole) the Amateur License MAY confer college credit as an elective.

>Everyone understands why Mr. N2EY *loves* morsemanship
> so much.

If Morsemanship means NOT being like Lennie and Company, sign me up!

>What problem? There's a problem?

Hard to see clearly with your head up there, eh Your Craniorecatllyinvertedness...?!?!

We will just keep a little list at the federal. state and local levels just to be sure. No harm in that right ???? Besides we could give a lot of bureaucrats jobs ....who knows in time we could weave this into der Vaterland Sekurity bill. Then there would be a need for more bureaucrats to be armed members of the Peoples Radio Police. This will surely get those ingrates off of our frequencies. In fact I think that there might be a place for the ARRL in all of this. Paid radio informers ....neat idea ...maybe have a continuing ed class in monitoring and enforcement. You know that as a service we can get downright creative with all of this maybe even to the point where we can keep the news media "jumping" in between our acts of God duties.

I had an occasion a number of years ago to have a fellow over for dinner who was from Africa. He was and is a well educated professional. After dinner I invited him to se my radio room. He said he really enjoyed radio programs at home. I wish I would have had a camera to save the expression on his face when the light went on. It was fear ... bordering on panic. I thought something was wrong. He asked immediately if the authorities knew of this. It then hit me how blessed we really are here in America. One only has to look at the inroads on our freedoms especially in the 2nd amendment area to get a picture of what "well meaning" government help is.

God Bless and save us from ourselves ....

>what is expected in the real world. Such tests are all gone, anyway.

The US military never took "average" recruits for morse code
telegraphy. Since WW2 days they gave them an aptitude
test. Those showing no or little aptitude got sent to other
military schools.

There is NO "boot camp" in the US Army or USAF. Such is
Basic Training.

There IS morse code cognition training currently in the US
military...at Fort Huachuca as several courses in the Military
Intelligence school (enlisted, warrants, commissioned). The
rates are higher than 20 WPM there. All students are tested
during and after training. Civilian intercept operators for the
US government are trained at Fort Huachuca as well.

Well, for the sake of a local paratranit (bus) organization,
someone ought to tell him at least the time of day. :-)

Without that, all the bus (paratransit) schedules would have to
be transmitted in morse code... :-)

If an RTTY radio circuit has such bad performance that you
need manual telegraphy through OOK CW to communicate
schedules and orders, then it will not be a good RTTY circuit
for regular traffic. It should become an OOK CW circuit
instead.

If an RTTY radio circuit is passing TTY messages fine in
regular traffic, then it doesn't need any OOK CW for
schedules and orders in order-wire use.

That's logical. One or the other.

Even in the 1980s other HF radio users didn't do such illogical
procedures. Only, has the Oberst explained, the "State
Department."

To have a profession implies being professional, of having an
income derived from someone or some entity receiving those
professional services.

Without any evidence of employment or no one receiving
professional services, we can consider you unemployed.

>> No company mentioned (for various fearfull reasons),
>
>"Fearfull"? Of what? Certainly not you, Len. I don;t even take you seriously,
>let alone fear you or any thing you could do.

Yes you are. I manage to sully that careful image of the
pedantic radio guru-wannabe that you try to cultivate.

Being unemployed is not a crime. Feel free to admit it.

>> no field

Oh, my, got a post-graduate degree in psychology too? :-)

Of course...EVERYONE has to have just ONE screen name
on any ISP, right? Did Case tell you this in-person? :-)

Is this screen name a "multiple" in this newsgroup?

Why did you insist and insist on a "signature" at the end of each
message when no newsgroup software allows anything to be
hand-written, just typed? Can you spell over-restrictive and
anal-retentive?

>> Poor baby.
>
>Hmmm... I get called 'baby', 'boy', and 'old fart'......Ageist,
>racist..........

"Poor baby" is a mild sarcasm that can be used against a
pedant with some anal-retentivity. It is common in American
English use.

>> My full USPS mailing address was in every byline
>> in Ham Radio magazine. Same in BYTE.
>
>Both of which are now defunct, are they not? If not, where can I buy the
>March, 2003 issue of Ham Radio fanzine?

All 22 years of Ham Radio articles are available on 3 CDs from
CQ and resold by ARRL for $150. Shipping charges EXTRA with
ARRL direct orders.

Ham Radio magazine quit publication in 1990 on the sale of
the parent company (Communications Technology, Inc.) to CQ.

CQ reorganized the assets of Communications Technology into
the Ham Radio Bookstore (still existing) and the formation of
Communications Quarterly magazine.

While Ham Radio is no longer being published monthly, it did
not disappear, vanish, or become absent in any way. The
three CDs prove that. Good information does not become
"defunct" like burned-out vacuum tubes.

>My full name and address in every US Callbook and CD-ROM since 1968, and are
>on
>the FCC database. Did you have trouble accessing the database to find my
>name?

No, but the information does not reveal your field of industry or
profession, either. :-)

I'll have to get a CIA World Factbook and check out if you are
listed in there, involved in stealth technology. :-)

>His hobby is wasting time....

Lots of offended beings waste their time replying, don't they? :-)

>
>Recent quotes posted here from the Google site reveal the ego which has
>been bruised to be yours.

Incorrect. Oberst Heil cannot take corrections or advice on
professional (non-amateur) radio procedure and tries to
misdirect the subject into one of "belonging to participants."

>> Some even go so far as to virtually claim ownership of an
>> activity, including the alleged authority to rule on who is
>> allowed to express opinions. They have no authority but
>> demand obeyance or they will meet the dissenters after
>> school is over and beat them up. :-)
>

>To state that I am a participant in amateur radio while you are not is
>just the iteration of a fact and has not been construed by any others as
>a statement of ownership of amateur radio.

The above is an example of "turf" claims.

>I don't demand anything of you.

Nonsense. Oberst Heil DEMANDS all the time, refuses to
acknowledge correction of professional (non-amateur) radio
procedures and techniques, then tries to misdirect the
subject to something else.

>You've been free to post your rants for quite a number of years.
>I've been laughing at them for years.

No. Oberst Heil, like a good prussian, has very little sense
of humor outside his inner circle of "participators."

>> All that about a hobby. :-)
>
>(...in which you have no stake.)

But the Oberst has a very large stake, one that is on fire for
burning heretics to "cleanse their spirit of evil."

There shall be NO dissent in the ranks. All shall obey the
correctness of the Oberst in all radio things, not just the
amateur ones.

Do you "own" that screen name, too? :-) :-) :-)

How much would you still "own" after you lost a civil court case of libel and had to pay damages?

AOL took that libelous HOME PAGE down, not your "post."

You do NOT "own" your own home page...you are only paying a lease for services. AOL owns the home pages.

You have a LOT of problems with property ownership.
Tsk, tsk, tsk.

Poor baby, still suffering catapult over-pressure?

I never "baby-sat" any Army TTYs. That was in tape relay at Chuo Kogyo. Poor guy never has seen any torn-tape TTY relay in operation, has he? Too bad, no US military branch has them anymore...doesn't need them.

Kellie doesn't understand that real, high-power (up to 40 KW) HF transmitters at a station are NOT "repeaters." They were not such a half century ago, still not so.

Not that I have to prove anything, but I'm on the BOD of my local club, I am a major participant in field day in the area, controlling the GOTA station and working the late shift. (we were second in our class in FD last year)I run the club website and am involved with the PAQSO party. I help at all the public service events for the club, and make every piece of equipment that I can for my shack. I help at the local ARRL kid's day efforts, and other recruiting efforts we do.

What do you do for the ARS?

He use to attack me here also remember? But now
I've shown him I'm not whining trying to get something
for nothing and not a part of the "I want it all now" group

> That's the *real* joke...
>
> Kim W5TIT

The real joke is I have a QSL card on my wall with
the callsign of K3LT and you don't. BTW Kim he's

really rather nice on the air. We even tried a little Hellschriber along with the PSK 31 and RTTY. He only tends to get rabid when you talk about laziness and callsigns naming body parts ;^) OTOH I'm not to fond of lazy people either, be it in the ARS or just life in general.

As for the assigning words to Larrys callsign here's my attempt at it. K3Let's Try

He's the one who suggested we try Hellschriber which up to that point neither of us had ever tried. BTW it works pretty nice also!

Have you tried MMTTY for RTTY? It's free and does a better decoding job
than almost any TNC. Uses your soundcard and is highly configurable.

Jackie:

In spite of any hasty conclusions you may have drawn about me without
really knowing me personally, in over 20 years as a ham the only time
I've questioned another ham's license class on-the-air is when they were
doing something obviously illegal. Those times have been few and far
between.

Since your PK-232 bit the dust, why not try a KAM-Plus next? Mine is 10 years old and showing no signs of "age" whatsoever, except maybe it's EPROM firmware version. It's a heckuva lot smaller than a PK232, does everything the 232 does, and I think it's a lot simpler for somone new to digital modes to master, since it can be controlled directly from the keyboard with a dumb-terminal or terminal emulator program (I use QModem).

Lennie:

No need. I hack my watch to WWV regularly, and the AMDT in my bus incorporates a GPS receiver which gives me very accurate time. I never have to call the Dispatcher to axe for a "10-36."

> Without that, all the bus (paratransit) schedules would have to

Mike:

Very impressive. I personally thank you for your service to the Amateur
Radio community.

I've been licensed for 21 years, and have been an ARRL member for 23 years.
I am currently the Vice-President of my club; having also served terms as
President and Secretary. I am also active in local ARES, SKYWARN, and serve
as alternate Net Control for our Information, Bulletin, and Traffic net. I
have
participated in Field Day each year since I've been licensed, and in my present

club, I am the Digital Mode "Captain" and Logging Manager. I am also the
one who prepares and submits the Cabrillo logs for all contests participated in

by our club and individual members of our club. I serve as a control operator
for our club's repeater system and on the repeater technical committee. I am
also the Founding Vice-President and Trustee of a smaller "break-off" club
which is devoted specifically to contesting. I am currently an ARRL Official
Bulletin Station and maintain a 24/7 packet BBS with the latest ARRL and
local bulletins. I have, throughout my ham career, served in the ARRL Field
Organization as an OO, OBS, and ORS. I operate a "low-profile" station in
my apartment using mainly indoor and balcony antennas, power levels
< 30 W. maximum, and primarily utilize CW and digital modes. In spite of
my modest operating conditions, I have worked all corners of the globe.
I am the 2003 Field Day Co-Chairman for the KCARC, and have served as
Field Day Chairman in 1996 and 1999.

Is this enough, Mike?

> Do you have hives?

So your response to my statement is just more of your nonsense.

> >No, I simply called attention to your playing fast and loose with the
> >truth.
>
> "Fast and loose?" Heavens no...everything is Strict and Proper,
> in formation, dressed right and covered down. Hut-too-tree-foah!

So that's your response to a statement which accuses you of outright
fabrication?

Me: "When I tell you, 'It's raining',
that is not a command, it is a statement based in fact."

LHA: "Of course. You will also say 'the sky is blue, the grass is
green' and other colorful statements of fact while red in
the face. Go for it."

> >Those aren't commands either.
>
> Oh, that's right! You issue Commandments!

Wrong again. I made statements.

Me: "Don't blame someone else that you allowed several decades of
"interest"
in amateur radio to pass without acting on that 'interest'."

LHA: "I have interest in my bank, too, but don't want to become a
banker. There, two facts, absolute truth. :-)"

> >Only dodges from you, Leonard?

> No, I only drive Chevrolets...

Yet more nonsense from you in lieu of an actual response.

LHA: "Would I expect the Three Morseketeers (and Dartisgone)
to "change?!?!?" Oh, my, no...not in a millennia....nobody
can tell them anything! :-)"

> >Somebody can. You can't. I have no obligation to accept your input on
> >amateur radio matters. As far as I'm concerned, you aren't anything to
> >amateur radio.
>
> Ah, "there you have it!" Dismissal. The Commandment issuer
> now dismisses the "inferiors." :-)

You aren't knowledgeable about amateur radio. You aren't a participant
in amateur radio. Why would anyone be swayed toward your view of how
amateur radio should be regulated?

Me: "You aren't interested in becoming a ham, Len."

LHA: "Ham is the butchered meat of swine. I don't want to be that.
:-)"

> >Ham: An amateur radio operator.
> >You don't want to be that either.

> Does Porky the Pig have a license?

Not to my knowledge. That'd be something you and Porky have in common.

LHA: "But, I've never been interested in jumping through hoops on
command of a bunch of control freaks who demand
dedication and committment to be shown to those freaks."

> >Yeah, those damned control freaks at the FCC. They'll only have you in

Just more nonsense from you.

LHA: Oh? I'm just talking about regulations...and unstuffing some
shirts, popping balloons.

> >Then you just aren't doing a very good job of it.
>
> I'm retired from regular hours, not on a contract assignment now.
> How can I be doing any sort of job? :-)

Your material isn't as cute when the stuff you snipped is reinserted.

Me: Until you pass an exam for an amateur radio
license, you are simply a spectator.

LHA: "Okay. I'll look out the window for rain."

> >It makes about as much sense as anything else you've done toward

We weren't discussing commercial radio licenses. We weren't discussing
driving licenses. We surely weren't discussing poetic license.

> Tsk, tsk, tsk, still no rain outside the window...

Still no amateur radio license either. Maybe if you make a wish...

>How much would you still "own" after you lost a civil court case
> of libel and had to pay damages?

You mean AFTER I presented all of the stuff YOU have posted?

You mean AFTER my representitive gets done presenting lie after lie,
accusation after accusation that YOU haev presentd here?

You mean AFTER my representitive shows your "invitation" to present your
GROL in an e mail and what was ACTUALLY delivered? And forget the lame
"mistake" twist, Lennie...He'll also present the tons of post you've made
laying claim to being an "engineering professional". Professional engineers
don't make those kind of stupid mistakes.

>AOL took that libelous HOME PAGE down, not your "post."

Wasn't anything libelous about it, Your Lyingness. You are a liar. It's
documented in your own posts. You make unsubstantiated accusations against
organizations and individuals alike without the least bit of intent of
validating your claims. You claim to be a professional engineer, yet you can't
even send e mail without making an error.

Whew.

>You have a LOT of problems with property ownership.

Nope. But you may.

>Tsk, tsk, tsk.

For once I agree with you. Tsk, tsk, tsk. What a shame for an old man
like you to be so blatantly self-abusive in public with your own misdeeds of
truth, and then alledge others to be "libellous".

Whew.

Yep. A Q-multiplier really helped it and the thing was stable and had a
uniform tuning rate.

> Best simple rx lashup for the effort and $$ from those days: BC-453 Command set

The converter route was a neat way to go. I held onto the R-100 because
a pal was selling a little Lafayette HE-73 Preconverter which worked as

either a preselector or converter.

> >I had a DX-20 later while living in Miami. I still remember that iron
> >vane meter clunking against the peg.
>
> Adventurer was the same way.

I still have one which I fire up from time to time. It is paired with
the Johnson 122 VFO.

I just came into some treasure yesterday. I was visiting K8IP on the
Ohio side of the river. He gave me a clean BC-348Q and a National
RCP--a variant of the NC-100 with the catcomb coil casting which
operates with a rack and pinion gear. The plate has a CAA contract date
of 1945 with crystal control option and squelch added by a company
called "Schutting" in Washington, D.C.

Both are about to undergo a recap operation.

> Not "dissed."

Yes..."dissed". As in "disrespected".

You lie.

You make up stories.

You antagonize.

You don't keep your promises.

>What "needs?" I have no need to fight personalities.

Obviously you do.

> I see some
> beings in here who are obsessive-compulsive about fighting
> others who do not share their opinions.

Whew! Could you have dropped that nut any closer to your OWN tree,
Lennie..?!?!

> They sometimes get back what they attempt to throw at others,
> then they get oh, so angry at shooting back.

Again, the nut falls close to home. Witness your years of antagonizing
and lying here.

That's YOUR leagacy, Lennie.

No one will remember your dubiously original articals in "Ham Radio" or
how you managed to pawn yourself off from one job to the next until you had
enough acorns in the nest that you could aford to quit jumping around.

What few Amateurs who DO remember you will remember you for lies and
profanity. They will remember you for deception and antagonism.

They will remember your deceitful attempts to embellish your weak military
"career" by invoking the memory of KIA's that you had NO association with other
than to serve in the same unit years after they perished.

Nice job, YA PUTZ!

I've not encountered many radio amateurs who swear that they'd never
upgrade.
Likewise, I've not encountered many non-radio amateurs who claim they
are going for an "Extra right out of the box" and who haven't done zip
several years down the road.

I worked in "the field" and found doing so pretty meaningless in amateur
radio.
I did it mostly for the money.

> Someone mentioned getting an Extra
> Class at age 16 and that it was tougher than a 1st Phone. I had

So you'd agree that someone can hold a commercial ticket and not know
anything about electronics?

I didn't find that working in a modern telecommunications center as
interesting as spending an evening on 1.8 megs chasing African stations.

> As for code, the military could teach the average GI to read
> code at 35 wpm, so I can't see much significance to that either,

> GI just out of boot camp is likely to have once they reach age
> 18 or so.

We've had a certain non-radio amateur who is a frequent poster here
report that only a very small percentage of GI's had any real morse
aptitude. You're saying that the average GI could become morse
proficient? I always thought so too.

> I personally like that idea of an Elmer. It's a hobby, it is

You might as well have taken the First Phone test, you wouldn'thave been the first 16 year old to get one. Obviously you could have done it. Wasn't any huge deal. But I get a little tired of hearing repeatedly that all the ham radio tests have always been "entry level" and trivial. Not so.

OOOOOOOH LENNIE!

The "royal" we...?!?!

Shame, shame! Falling prey to your own rants!

YOU can consider him anything you want. The rest of us know the truth.

>Being unemployed is not a crime. Feel free to admit it.

Neither is being stupid or arrogant. Take your own advice.

What was the percentage of those taking the aptitude tests which showed
little or no aptitude for learning morse again, Leonard?

> There is NO "boot camp" in the US Army or USAF. Such is
> Basic Training.

That's funny. Air Force DI's at Amarillo routinely referred to Basic
Training as "boot camp" in October and November 1968. I still heard the
term used at Lackland in 1971 and '72 after I returned from Vietnam.

You weren't in the Air Force either were you, Len?

And I'd suggest that if you predicate your opinion of ham radio and hams, and anyone posting here, only on reading of this this thread you're in for a real shock. Assuming you can handle Google go back a few years and work your way up to the present then get back to us. To say your knowledge of things is incomplete is just too much understatement to even present a small piece of a case. You've got the chips on the wrong shoulders.

The magazine is defunct. I have a whole shelf full of Radio Craft magazine. It is defunct as well. There are no new issues of Radio Craft yet, lo and behold, the old copies still reside on the shelf.

"Incorrect" just doesn't cut it, Leonid. You made a number of false statements which Google archives disproved. You didn't have any "corrections or advice" to offer. You were as much involved in Department of State communications operations aa you are amateur radio operations, i.e. not at all.

> >> Some even go so far as to virtually claim ownership of an

Let's see if you are good at taking advice, Lynnard. To become a participant in HF amateur radio, 1) become "proficient" in morse code at the rate of 5 wpm and 2) pass the appropriate written exams. Maybe you're above such things.

More humor from Leonid! Why no, I own several dictionaries but I didn't really need them for this one. In all of them "Attila" is spelled with one "L" as is the word "suxiliary". You've misspelled both of them more than once. Why not simply admit that your little spelling lesson for Steve backfired? Your gaffe was entertaining though.

Please explain how those not licensed as radio amateurs make up an
ethnic group? Please explain how the "rest of the human race" gives a
hoot about amateur radio at all.

>I get a little tired of hearing repeatedly that all the ham radio tests have always
>been "entry level" and trivial. Not so.

As I mentioned earlier, I did in fact take the 1st phone as a teenager. At the time an Extra Class offered no privileges and I saw no reason to bother with it. I needed to eat, so I tested for both commercial telephone and commercial telegraph licenses. I never used the telegraph ticket and let it lapse. I was working in the broadcast industry when I was in the 11th grade in high school. (It paid for my education... but telecommunications is *lots* more fun!)

I knew *many* disk jockies that went to school for six weeks and earned 1st Class Radiotelephone tickets. None of them had *any* perception of what it all meant on a larger scale. What they understood was that by memorizing a test they had a better chance of being employed. Smart people, but not technicians.

I don't recall anyone who was familiar with the tests in the 1960's that did not think the Amateur Extra was a "harder" test than the First Class Radiotelephone. Big deal. As to being a reflection on knowledge of electronics, they are indeed *both* entry level in nature. I have no doubt that a 6 weeks course could also teach that Extra Class exam too. I have no doubt that, at a _minimum_, several months of a top notch tech school and then 2 to 5 years of hands on experience working with a variety of radio equipment is required to reach a level of professional stature. Five years of engineering courses and 2-3 years of work experience are even better. (Incidentally, I've also known several top notch radio technicians who simply did not do well at tests, and never did pass either a 1st or 2nd Class Phone exam. I just don't see the tests as an indicator of ability as a technician.)

But the point is Ham Radio is *not* a professional service. It is a *hobby*. There is no reason to deride someone who has just barely learned enough to tune up a rig and start a QSO. If *that* is fun, then *that* is what the person needs to learn. They don't *need* to know what people learn in tech schools and in the first several years on the job. They *never* need to learn that. Unless of course it just happens to be something that is fun for them to learn, in which case it is fine if the do. It *doesn't* make them any more special in the Ham world than an accountant who can just barely tune a rig, but does a local Ham club the favor of keeping their books for them.

Technical expertise in radio is *not* the measure of a Ham. And none of those tests are the measure of technical expertise anyway, so claiming a test is a measure the a Ham's value is just absurd.

Nothing I said suggested that to be true! So perhaps _you_
could be in for a shock concerning exactly what I do predicate
my opinion of hams and ham radio on. :-)

> Assuming you can handle Google go back a few years and work your way up to the present

I *know* better than that.

In what I think is the much *more* typical style of Hams in
general, the responses to it have been (except for yours) very
agreeable. And even yours isn't filled with the silly bullying
and insults that were in the posts by Larry (and which you
voiced support for) that I referenced.

(A couple of the responses to my original article were downright
nearly as pleasant as I've seen anyone be on Usenet, including
one email which was just an absolutely wonderful message.)

>and I think it's a lot simpler for somone new to digital modes to master,
>since it can be controlled directly from >the keyboard with a dumb-terminal
>or terminal emulator program (I use >QModem).

I rum my 232 from a terminal emulator and control it directly from
the keyboard. I use it mainly for (non-ham) MF/HF monitoring. Were
I on HF (I am licensed for all ARS bands and modes but I haven't had
a HF rig for over 25 years) I would run PACTOR.

The fancy (and expensive) packet program runs a PK-88 on 2-m.

I recently acquired a KAM-3 (not the plus) which I may set up
on a second packet channel (our ARES/RACES operations here are
heavily into packet) or use it for APRS - I haven't decided
which. The antenna connected to that transceiver went sour
(20+ dB down compared to an identical antenna on the other
mast) and the safety officer that I've been married to all
these years has declared that I have to wait until it's drier
and warmer to climb up on the roof (I agree).

It's taken me a while to shift gears to the Kantronics command set
after using the AEA for over 10 years. It is smaller than the PK-88
and the PK-232 but I do miss the tuning indicator and DCD sensitivity
control that the 232 has.

But learning new stuff is part of the fun of ham radio.

I said about all that I wanted to say about that..... <ggg>

Actually what I said (and the reply message text got wiped from the
bit-bucket) was that yes, FCC engineers served as examiners when the
regular license examiner was on vacation, out sick, or on a lunch
break. We trained our clerical staff to cover the written exam and
applications processing tasks, but the engineers (and later we got
technicians) were the ones who gave the code tests.

Before we give another group authority to collect even more information on us, I'd rather see a few baby steps first. Such as serious steps to better enforce the laws already on the books and perhaps requiring a license be shown when purchasing equipment that requires a license to use.

I've encountered Extras that wanted to downgrade to Advanced so they could prove to the world that they were "old-time" hams who knew the Morse Code. I can only wonder why they don't prove to the world that they know the code by simply using the code.

> Dave K8MN

Dave, I'm sorry you have such limited experiences with people. Thats what happens when you spend the majority of your life in a comm shack handing out Q's at a 4 per minute rate.

Let me help you out. People often don't do what they say. There are rare exceptions, such as yourself, whom always do what they say, and don't do what they say they won't do. But not everyone is like you. Trust me.

For example, many people find trying to learn the Morse code confusing and frustrating. Some just can't do it, whether they have a learning or hearing disability, or just can't get past the frustration part. In another time and place, those people became Cooks and MP's. Your only experience has been inside the comm shack, where you see a bunch of ditty-boppers. You assume anyone can be a ditty-bopper.

Do you suppose that there might be a person out there who has no interest in VHF+ amateur communications, but having had a career in HF communications, would like to get an HF license? But then finds that

they cannot learn the code? Perhaps even reflects back on his or her experiences on HF, and ask why the Code is so necessary to amateur communications in the year 2003?

I hope I've helped you out on this subject.

Best of Luck, Brian

> severely in content and quality.

Don't get me wrong. I had to spend some serious time studying for my Extra. But that desn't mean it was "hard" for me. It meant studying and working on the material. And although my weakest knowledge are is in RF, (one of the reasons I forst started looking at the ARS in the first place) I am savvy enough to know that there isn't as much difference as you say. Maybe we have different definitions of hard.

In my limited experience, I would have to say that if there were one area that needed improvement in a retro fashion, it would be that the prospective extra would be required to wait for a while before being able to teast for and get the license. I know a few Extras who passed the test and have nil HF experience. It IS a shame when an extra doesn't know how to operate an HF rig.

> Seems worth saying one more time- If the Extra class is not going to mean

Who says it doesn't mean anything? It means something to me.

I'll judge ALL hams on what they do afterwards. This includes pre "easy test" hams, CW wizards, Pre-restructuring hams, Pre-incentive licensing hams, shack on a belters, those of us who took the easy tests, and the whole gamut.

And great fun it is! There are enough different modes and activities to keep a person gainfully occuppied and having fun at the same time.

> I haven't gotten around to putting together a rig to get on the
> air, and this type of exchange is cause to question whether it
> would be worth the bother.

Don't let the actions of a few deter you. Now get on the air! My biggest regret is that I didn't start in Ham radio sooner. Even to the extent of taking the so-called hard tests.

> I personally like that idea of an Elmer. It's a hobby, it is

Sure is fun. Not many things I can Elmer on, being a relatively new ham and all, but I help where I can.

That is blatantly false ... I, for one, have REPEATEDLY stated
that, while technical proficiency could/should be improved in our
ranks, that there should NOT be anything even remotely approaching
an EE level of knowledge requirement.

> They really do want something for nothing.

Also blatantly false ... all we want is to eliminate an outdated,
unnecessary
requirement that only serves as a barrier to entry by qualified people (the
Morse proficiency requirement).

Agreed, Floyd!

If a person is truly trying to sway others, they are much better served by being pleasant in their approach. Like it or not, abrasiveness works best on sandpaper.

Since we are on the google thing here, I suggest anyone interested do a search on Fritz Zwicky. A brilliant but eccentric astronomer who was so difficult that colleagues purposefully discounted some of his theories until after his passing. (dark matter)

His abrasiveness and intractability actually impeded science's progress.

I wonder if he would have changed his approach if he considered that he was actually doing harm to his profession?

Ok Phil and Larry tnx for the info ... my 232 suffers from what I have heard
is a terminal IE DOA condition....I have tried x2 to replace the LM-317
regulator which apparently is the problem with the 232 series in that a lot
of heat is generated. I am no design engineer but that is what I have heard
throughout the years. The information I received from Timewave was that
the unit is probably gone for good. Pactor is definitely the mode I enjoyed
the most. I have tried the sound card stuff through a home brew interface
but I think my optoisolator or there abouts is shot as there is a T-R
problem. Again this is one of those things that I have to get around to
doing.

That lists keeps getting longer and longer....

The only baby steps that I would like to see is a return to the enforcement that was present back in the 60s ...and that would return these days only with a yearly license fee. I am sure that would go over big with the "somfin fer nutin" crowd.

ANYTHING which results in a less intrusive federal government,
less tax burden on overtaxed and overegulated Americans IS
ALWAYS good news! As well as anything that results in a
shrinking of the bloated federal bureaucracy and too many federal
bureaucrats is always good news as well for the American tax payer.

Lloyd

"Contrary to premature reports from power hungry federal
bureaucrats, the Second Amendment to the U.S. Constitution
is NOT dead and IS an individual right guaranteed by the
United States Constitution."

2836. Re: County Issuing Radio Licenses

Newsgroup: rec.radio.amateur.policy

Reminds me of a practical lesson in "frequency assignment"
which I witnessed being taught to the FCC a few years
ago. Two gents approached the U.S. Navy ship on which
I was a civilian tech rep a few years ago. One guy was fairly
obese and the other looked like Elmer Fudd. They approached
the gangway, waving tiny gold badges and screaming something
about a radio signal coming from this ship and that they were from
the "FCC." They demanded to see the C.O. of the ship but
instead, the OOD had the Marine guard deposit them on the
nearest civilian property, with instructions not to set foot on
military property in the near future, less they get to sample food
served in the Navy brig. Funniest dam thing I saw in years!

My opinion is based on experience. I was co-sysop of a BBS that was online from 1989 to 1996. It handled Fidonet, and later, Usenet message groups. Users posted with handles to remain (semi)anonymous, just like today. Two groups of users got into on the board, and threatened to sue. Now, how do you think a *reputable* lawyer is going react when a client asks about suing someone only known as "Malignant Boner" and all you have is an IP address?

>Google is full of examples for anyone who chooses to look, and they

No new issues in more than 12 years = defunct. R.I.P.

> CQ reorganized the assets of Communications Technology into
> the Ham Radio Bookstore (still existing) and the formation of
> Communications Quarterly magazine.

No more new issues of "Ham Radio" magazine. That means "defunct". Like
the allegedly shagged-out Norwegian Blue in the Monty Python "Dead
Parrot" sketch. 8-(

>
> While Ham Radio is no longer being published monthly, it did
> not disappear, vanish, or become absent in any way.

Really? No new issues in 12+ years but it has not become absent in any
way? HAW!

> The
> three CDs prove that.

All the CDs do is make old information available without the need to
make paper copies.

> Good information does not become
> "defunct" like burned-out vacuum tubes.

Lots of vacuum tube information in those old issues of "Ham Radio",
too. :-)))

An FCC representative sits on the Interagency Radio Advisory
Committee (IRAC) that does. Until NTIA got into the act, the
FCC did the paperwork and provided the leadership for IRAC.

Yet, Zack Electronics, the "parts house" in San Francisco for many
decades, had a counterman named Elmer (Grassi) who was a top-notch ham
and assisted many a ham and broadcast professional in getting the
right parts either from stock or on special order.

You were wrong about your limits. You were wrong to announce anything
if there was the possibility that you would nearly instantly change your
mind. Alec Baldwin found himself having to eat HIS words too after
announcing that he'd be leaving the country if George Bush was elected.

You ran yourself off for a very brief time.

> So next you start the "Kim and Alec Baldwin" routine on me. Didn't

I've never handed out "Q's" from a "comm shack".

> Let me help you out. People often don't do what they say.

I was aware of that. We have only to look at Cecil, you, Kim and Len in
this very group to confirm that.

> There are
> rare exceptions, such as yourself, whom always do what they say, and
> don't do what they say they won't do. But not everyone is like you.

I was aware of that as well.

> Trust me.

I'm going to have problems with this one. You told us that you were leaving the group but your absence was very brief. How can I trust you?

> For example, many people find trying to learn the Morse code confusing

> In another time and place, those people became Cooks and MP's. Your
> only experience has been inside the comm shack, where you see a bunch
> of ditty-boppers. You assume anyone can be a ditty-bopper.

I never worked with a bunch of ditty-boppers anywhere. My last year in the military was spent doing news releases for the Lackland AFB Office of Information. I never encountered ditty-boppers in any of the several rock and blues bands of which I was a member. While a couple of the electronics distributors I worked for had hams as employees (I even had a radio amateur, W8PBX as a sales manager at one place), none were real CW aficionados.

I believe that just about anyone can learn morse code at a rate of five words per minute in very short order.

> Do you suppose that there might be a person out there who has no
> interest in VHF+ amateur communications, but having had a career in HF
> communications, would like to get an HF license? But then finds that
> they cannot learn the code? Perhaps even reflects back on his or her
> experiences on HF, and ask why the Code is so necessary to amateur
> communications in the year 2003?

We've been through all this before. I don't believe there are many people who can't learn morse code at five words per minute. I don't believe there will be any morse test at all within a short period. I believe that even Len Anderson can learn morse at five words per minute. After all, he has told us that he already knows morse code. How much of a stretch can it be for him to become "proficient" with it at five words per minute? I believe that morse is used as much in 2003 as it was in 1998 in amateur radio.

> I hope I've helped you out on this subject.

Not really.

I was also sysop of both a land-line and ham radio packet BBSes back between 1990 and 1995, and I had to deal with similar issues. One of the most famous issues had to deal with a ham in my area (WA3QNS) sending a message that denounced the gulf war (Actually it was a poll), and included a 1-900 number to call. Someone got the bright idea that this post facilitated business use of ham radio, and the FCC got involved. To make a long story short, the rules were subsequently changed so that BBS operators were not held responsible for the content of messages posted by their members. To view otherwise would've placed a great deal of pressure on sysops, to constantly monitor traffic. A daunting task, to say the least.

> ...and what was the outcome of these suits? Settled out of Court?
> Dropped? Dismissed by the Judge?

There have been some successful suits. The vast majority never make it to court though, as there are just too many obsticles in the way, and

it's generally not worth the effort. Plaintiffs, in libel cases, still have the burden of proof to show damages, and that is often not quantifiable. It's also hard to draw the line between statement of fact and the expression of an opinion, the latter being protected under the 1st amendment.

> Like I said, either post the link or shut up. I'm not doing your damn
> homework.

It's just hot air. Like the frivilous lawsuits where a criminal breaks into a house and injures himself in the process, and sues the homeowner. No one with any sense would even consider such a case.....

Maybe that's where they got the nickname! OUR (Cincinnati) Elmer was not a ham and used to say about hams, "Those hams will take up ten dollars worth of time for ten cents worth of parts". In those days, Elmer would have had to wait on one ham for three hours to hit the ten buck mark. He came to us from Lapriow Brothers Surplus in Northside where he was the grinch behind the counter for years. If you wanted pleasantry or were looking for some technical advice, you had to deal with one of the two owners.

> not the -sole- factor.

It is a *hobby*, and technical expertise is *not* the measure of
a Ham. It isn't even a part of that measure!

Think about it! Some of the *least* technically inclined Ham
operators are the *best*.

It is just wonderful if any given Ham wishes to develop a level
of technical expertise approaching or equal to a professional, but
that doesn't equate to a measure of that person as a Ham.

Instead, what they *do* with that expertise is an important part
of such a measure. For example, if they use it to help others,
either by teaching those who want to also develop the same
expertise or if they give technical assistance to those who do
not, *that* is the material of a good Ham. If they use their
expertise to disparage others or to insult whole groups of people
(i.e., Novices or new Extra Class licensees) then that expertise
is a net negative.

It is not technical expertise which counts. It's what a person
does with whatever talents they bring to the table (large or
small), that is the measure.

Hence we have some here demonstrating very effectively that
technical expertise can be a negative.

I think you completely misread my comment.

And I agree with eliminating outdated, unnecessary and superfluous
requirements.

But please reflect on what some of the PCTA Extras have stated
regarding current theory exams. As far as the code exam goes, does
Extra Dick want the elimination of outdated requirements? Does Extra
Jim want outdated requirements removed? Does Extra Kelly want
outdated requirements removed? Does Extra Phil want outdated
requirements removed? Does Extra Larry (non-electronics career) want
outdated requirements removed?

Nope. That's more than two (aka "a couple").

I stand by my statement of "many."

Brian

Depends on what background you had when you took the tests. Sure, the
extra writtens are not a big deal for a person with a BSEE to handle.
But for someone in a non technical field it would take some effort.

I have heard urban legends suggesting that such schools taught
little more than "Question 38's answer is 'C'". As if the FCC
only had one test and it was an open secret that the answer
key was known outside of the FCC offices....

I have found that most of the time is spent trying to get the salesperson to understand what I want. Not trying to learn technical info. Sometimes they don't even have what I need. Nowadays I spend most of my searching for parts on the 'net.

I don't think they had the answer keys, but they certainly did
have the exact wording of each and every question that would
ever show up on a test. So the "school" taught pattern matching
between 300 (or whatever it was) questions and answers.

That's actually easier than "Question 38's answer is C", because
on some tests it was question 43 or 12 instead. :-)

From N2EY:
>>>You were the one who started waving degrees around.

I never was "waiving" my degree, just stated my interests. I mentioned my degree to show why I would be interested in the electronics aspects of amateur radio.

From K4YZ:
> But as demonstrated before (with references to established secondary
>education facilities within spitting distance of Lennie's hole) the Amateur
>License MAY confer college credit as an elective

Did you just read what you wrote? I seriously doubt any accredited college would offer college credit, even 1 credit, for getting an amateur radio license. Using a question pool format, most people can pass the test within a week. Giving college credit for that would be wrong. Which college does this?

The subject material for the test is very good - if one truly mastered those areas. One way to make use of this would be to offer ARRL certification courses. Its not the same as the amateur radio license. Certifications mean you went into more detail in a specific area.

> It is a *hobby*, and technical expertise is *not* the measure of
> a Ham. It isn't even a part of that measure!

First, it's a service, that some people choose to pursue as a hobby.

Check out 97.1 ... to quote:
ï¿½97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:

(a) Recognition and enhancement of the value of the amateur service to the
public as a voluntary noncommercial communication service, particularly with
respect to providing emergency communications.

(b) Continuation and extension of the amateur's proven ability to contribute
to the advancement of the radio art.

(c) Encouragement and improvement of the amateur service through rules which
provide for advancing skills in both the communications and technical phases
of the art.

(d) Expansion of the existing reservoir within the amateur radio service of
trained operators, technicians, and electronics experts.

(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

b, c, and d all point to the value of technical proficiency amongst hams
as justifying rationales for our continued access to our spectrum
allocations.

NOWHERE in Part 97 does it refer to ham radio as a hobby ... it's a service.

> Think about it! Some of the *least* technically inclined Ham
> operators are the *best*.

While I will admit that someone can be a polite, courteous,
"good" *operator* with little technical knowledge, that does
not mean that we should encourage folks to believe that
technical knowledge has no merit or value and they should
all become techno-ignorant appliance operators.

What's the point??? Remember, we're talking about basic qualifications
here, not some "work ethic, make 'em jump through hoops" crap ...

Dick apparently thought the test he had to take was "hard" ... he doesn't
believe that todays' tests are "hard enough" ... and he begrudges anyone
who already has the technical knowledge to pass them easily because
he believes that "everyone should have to work hard to demonstrate their
dedication" in order to "earn" their license ...

If Congress would permit the FCC to keep the money and use it for
increased enforcement in the ham bands, I'd gladly pay an annual fee
of, say $10.00, for my ham license (or $100.00 for a 10 year license,
plus the maintenance fee for my callsign)

So, someone wants the government to keep track of cordless phones, video senders, non-IR TV/satellite remotes, etc.... (well, part 15 was included).

If that's what we really want, that will force the FCC to become as large as the IRS, 100,000 employees strong nationwide, just to MANAGE THE PAPERWORK. What a bonehead idea.

Now, there may be some merit in "REAL" two-way gear tracking, but then don't we already have that - it's called LICENSING? :-)

I know what was good doctrine and procedure on HF radio
as used by US government and military communicators.

The subject originally was using CW telegraphy as an
"order-wire" on an RTTY circuit. Illogical procedure.
Not used by other agencies.

> It should become an OOK CW circuit
>> instead.
>
>That wasn't for you to decide.

True, but that didn't make it "good" or "logical," did it?

>> If an RTTY radio circuit is passing TTY messages fine in
>> regular traffic, then it doesn't need any OOK CW for
>> schedules and orders in order-wire use.

>Again, you haven't been paying attention.

I pay attention to practical procedure that makes sense in
radio, especially that which was worked out years before.

>> That's logical. One or the other.
>
>It wasn't for you to decide.

Yes it was five years ago. Heil tried to pull off a snow job
on pro techniques, got bit on the ass then, hasn't stopped
hurting since.

>> Even in the 1980s other HF radio users didn't do such illogical
>> procedures. Only, has the Oberst explained, the "State
>> Department."
>
>The Department of State was not obligated to do everything some other HF
>radio users did, Spock.

Yes, Nurse Chapel, there's no Bones about it. If anyone
Chekovs old messages they won't find any actual reference
to State's procedure, will they? Uhura along and find that the
only "authority" on State is the one shoveling the snow job
about CW telegraphy order-wires on an RTTY circuit. Even
Scotty wouldn't do that all the way to Sulu land. Don't have
a Roddenberry, Kirk.

>You mean that you aren't impressed? You don't know anything about my

Careful, Brian, he has a friend who is a judge...

Oddly enough, "smileys" or emoticons are claimed to be the
innovations of a Tektronix engineer, first seen on BBS networks
years ago. Tektronix, a world leader in oscilloscopes, is head-
quartered in Oregon, near Phil's residence. :-)

Another macro repeat of a Big Lie item, really the opinion of
another. As stated in another message, I will repeat such
to aid a propagandist wanna-be. :-)

>I'd have to say that you are predicatable, Leonard.

More confusion and misspelling.

I'm not "predicate-able" in that I don't like to diagram sentences.
I just write them. Sometimes I get money for writing.

I'm not "predictable" in that I follow someone's rules on how
to take chastisement like a good little "inferior." :-)

The word might be "predicament" misspelled...but it's not my
predicament but rather Heil's original snow job that he buried
hisself in 5 years ago.

"Radio Craft" was a Gernsback publication which changed its name to "Radio Electronics" and later used the familiar "RE" colloquialism of its readers in reference to itself within the magazine. As far as I've bothered to look on Fry's Electronics big newsstand, it was still in publication last year. I sold a two-part article to RE back in 1968. :-)

Misdirection. Herr Robust is confused and angry, not
understanding that his legs were pulled or perhaps enraged
that someone had the temerity to tweak his royal nose. :-)

"Cashews" refers to the principal export of Guinea-Bisseau,
a rather small former colony in the middle of Africa...the
location of the US embassy where radio officer Heil used
manual CW as the "order-wire" of an RTTY circuit.

Poor feller must be nuts, can't focus on anything but
himself.

>My callsign is mine as long as I breathe and continue to renew it.

That "callsign" is NOT real property, is not personal property.
It is the registry of your permission to operate according to
US amateur radio regulations, the registry maintained by the
FCC. The FCC has the perfect right to take away that
callsign if it sees fit to do so.

>No one else is authorized to use my callsign.

Quite true. The same thing applies to driver's license numbers,
hunting and fishing license registry numbers, and many other
licenses having registry alphanumerics.

>You are less a
>participant in the issue of my callsign than you are in amateur radio.

The FCC may take away your license (and the callsign) any
time they see fit. No staff or commissioner in the FCC is
required to have any amateur radio license.

>No, the statement I made is irrefutable fact.

Incorrect.

>Ummmm...again, you weren't remotely involved with any Department of
>State communications operations ever. You have made a couple of false
>statements.

Not. While details of US Department of State activities are
not fully public, indeed some are quite classified, much of it
IS quite public. DSN listings of embassy and consulate staffs
are an example. If you wish to embellish staff listings as
"key lists," that is your own title hunger growling. "Key lists"
is the familiar name of master cryptographic keys, not staff
listings.

State Department radio communications facilities' capabilities
on HF isn't publicized in amateur radio magazines, yet their
size and nature are known to other radio professionals involved
in HF communications for the various military and government
agencies and groups. Within the USA international networks of
radio, State has always been one of the smaller ones. Their
procedures on HF are generally that of all other HF radio
communications involving both message traffic and as common
carriers for messages of several agencies using a network.

A term such as "order-wire" is not well-known to radio
amateurs. It is the command circuit, full-time or part-time,
used to maintain a radio circuit or circuits to a receiving
location. It is familiar to those few of us who have been in
government, military, or common-carrier communications.

What was done in here was to mention "order-wire" casually
on an opinion of the superiority of using manual telegraphy
on a radio teleprinter circuit, claiming that conditions in the
middle of Africa made it too difficult to "synchronize" schedules
and other circuit commands. On the face of it, that is highly
illogical. If a radio circuit cannot handle RTTY as an "order-
wire" function, then it cannot handle normal message traffic
using TTY. It should be a full-time CW telegraphy circuit. On
the other hand, if normal TTY message traffic works, then there
is no reason whatsoever not to use TTY for the scheduling and
command instructions. The switchover to CW telegraphy just
for "order-wire" information exchange makes no sense.

That snow job might have passed unnoticed among a group of
average radio amateurs, hobbyists who have probably not had
any experience with full-time HF messaging. Unfortunately, it
did not and the snow cover-up has been going on for 5 years.

>Those have come back to bite you in the ass.

Not mine. :-)

>You have no more way of knowing that than you do of State Department
>communications operations.

Snow jobs are snow jobs. Some fancy description of government
activity can't cover up lots of snow.

>N2EY: "Besides, here's a simple, plain fact:
>
>No matter what job, educational level, employer, or
>government/military service that a radio amateur has, if said radio
>amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
>Anderson's insults, ridicule, name-calling, factual errors, ethnic
>slurs, excessive emoticons and general infantile behavior."

No problem with me. If Herr Robust wants to perpetuate a
Big Lie technique in propaganda, I am willing to help him
out by repeating it every time he uses that macro. :-)

>I have a stake in that I am a participant in amateur radio.

That isn't the principal cause of all this snow job coverup.
You have a "stake" only because of ego and pride not
allowing you to give in to any correction. You will insist
and obfuscate and misdirect any correction of an obvious
original flaw until you are no more.

>> There shall be NO dissent in the ranks.
>
>You aren't in the ranks.

True. My military Honorable Discharge was received in 1960.

>I don't determine whether you participate in amateur radio, Len.

Misdirection again. One does not have to be a participant in
amateur radio to understand that the alleged CW "order-wire"
on an RTTY circuit was illogical. Those of us who had been
in HF messaging for the military and government knew it wasn't
good procedure.

>You'll have to pass the exam if you want to do that.

Continual misdirection. Tsk, tsk, tsk.

>
>> >Only dodges from you, Leonard?
>
>> No, I only drive Chevrolets...
>
>Yet more nonsense from you in lieu of an actual response.

I've written it before and continue to write it. My original
purpose was to argue against the morse code test for an
amateur radio license, any class, in the USA. That is
still my objective.

Personally taking and passing an amateur radio test was
not my personal objective, personally speaking.

Unfortunately, a small group of anal-retentive macho
morsemen cannot see arguing anything except from a
point of view equivalent to their own personal ideals.

>You aren't knowledgeable about amateur radio.

Wrong. US amateur radio is one of the most-publicized
hobby activities involving radio in the United States. The US
regulations on amateur radio forbid transmission with the
intent to obscure communications. There is nothing secret
about US amateur radio.

>You aren't a participant in amateur radio.

True. That's also true of every single unlicensed person who
might, someday, want to get a license.

The FCC does not require any staffer or commissioner to have
amateur radio licenses, yet they MAKE the regulations regarding
US amateur radio.

>Why would anyone be swayed toward your view of how
>amateur radio should be regulated?

It is not possible to change the very set-in-old-mental-concrete
minds of superior beings who have a need to control what is
"best for amateur radio." I do not attempt to change their
minds. They are unmoveable in any event. They, as self-
styled "superior beings" become quite unglued when confronted
by others having opposite viewpoints about a radio activity.

>That isn't what I wrote.

>That isn't what I wrote.

Your exact words are not inviolate. You cannot take any criticsm
of your "superior" viewpoints so you go on tirades of rebuke and
false charges, fantasies of conspiracy that others aren't saying
what they are writing. No problem. You are an "untouchable"
who feels he must always be obeyed just because you exist.

Now you are angry at a light tone in response, demanding some
kind of penance for false sins. Pfui. Ptui.

>Just more nonsense from you.

>Your material isn't as cute when the stuff you snipped is reinserted.

Awwwww.....

>We weren't discussing commercial radio licenses. We weren't discussing
>driving licenses. We surely weren't discussing poetic license.

We surely weren't discussing US Department of State, either,
yet you are using that as one of your "superior" attributes. :-)

Shirley, you lack a sense of humor.

>Still no amateur radio license either. Maybe if you make a wish...

False argument. Only you were demanding that all have a
federal merit badge for amateurism to achieve your concept
of amateurism.

>enough acorns in the nest that you could aford to quit jumping around.

Oh, the IRS, Franchise Tax Board of California, Kitsap County
Assessor's Office in Washington state will remember every year
at tax time. :-)

Pssst: A-R-T-I-C-L-E, not "articals." :-)

Also: A-F-F-O-R-D, two Fs.

Nests. Plural. As to "pawning around from job to job," you can
ask KD6JG about that...or W6MJN...or N2JTV. It's the nature of
the aerospace business...if one is able to hold a job long enough
to see the next downsizing period. Ask Phil, K2ASP, about that,
seeing as we both worked in the same corporation down here.

> What few Amateurs who DO remember you will remember you for lies and
>profanity. They will remember you for deception and antagonism.

P-U-T-Z and C-R-E-E-P. Guess who used those? :-)

> They will remember your deceitful attempts to embellish your weak
military
>"career" by invoking the memory of KIA's that you had NO association with
other
>than to serve in the same unit years after they perished.

"Weak military career?" What was "weak?" Four years active,
four years reserve, got promotions almost as soon as permitted,
received an Honorable Discharge after 8 years of service. If you
have a dispute with my US Army service, contact the Adjutant
General's Office, United States Army.

I see nothing "dishonorable" about being proud of my signal
battalion, the men who served in it from 1946 on through 1957.
I know that unit's history, what happened in Army reorganization
in central Honshu of Japan later, how the lineage traces to the

present-day 78th Signal Service Battalion, 516th Signal Brigade, Headquarters US Army Pacific and the callsign ADA. My signal battalion was twice awarded a Presidential Unit Citation for exceptional signal services while I was assigned to it. I was a part of that. We "got the messages through" as the present-day Signal Corps motto goes.

> Nice job, YA PUTZ!

Thank you. Is that some sort of marine thing, to salute another military branch's performance using middle-European ethnic-Jewish words for "dickhead?"

temper fry

>
>You are ever true to form.

In praising the US government, yes. :-)

State Department is not known for a history of correct procedure
in communications. A rather infamous story on that in 1943 is
told in David Kahn's "The Codebreakers: A History of
Cryptography." That book was on the NY TIMES bestseller lists
(non-fiction) in the early 1960s.

There's more that came out in the Iran-Contra hearings made
public over television, some more in Bamford's book on NSA,
"Body of Secrets." I don't think Herr Robust wants to hear of
those and the newsgroup isn't for the history of gaffes and
giraffes in the US Department of State. :-)

At least Foggy Bottom has managed to clean itself up. A pity
that some amateurs (who once worked for them) can't. :-)

>N2EY: "Besides, here's a simple, plain fact:

Tsk, tsk, tsk. A "big lie" technique, Herr Robust. You keep on
repeating that word for word. Maybe someone will believe it if
you keep it up. It worked once for a particular political party in
Yurp in the 1930s and early 1940s. Feel proud. :-)

>
> Whelp, Lennie, for the meantime it's mine.

It does not belong to you as if it were real property. FCC can
take it away from you any time it wants to. You won't have
much say about that and you may have to pay a rather large
fine in addition to being stripped of permission to operate.

> No one else's. Only one in the world.

You have achieved uniqueness and glory by being assigned
a 1x2 AMATEUR callsign. :-)

> Please remind us about yours?

You mean...the First Class Radiotelephone (Commercial)
Operator License granted after just one test session in March
1956 at a real FCC field office in the Federal Building in Chicago?
Hardly any snow that month in northern Illinois and the 90 mile
train ride was uneventful (kept shoes on the whole time). :-)

You mean about the VHF station license that I co-owned with
some partners a while back? Business band, of course. :-)

You don't really want to be reminded, do you? :-)

>laying claim to being an "engineering professional". Professional engineers
>don't make those kind of stupid mistakes.

EX purchasing agents don't make mistakes... :-)

I spent my adult life working for money in electronics engineering.
Sometimes mistakes happened. We knew how to correct those
and then corrected it.

Do we need to dwell on the consequences of mistaken blood
typing in certain medical fields?

>>AOL took that libelous HOME PAGE down, not your "post."
>
> Wasn't anything libelous about it, Your Lyingness.

Tsk, tsk, tsk. It was. Had it been "innocent," AOL wouldn't
have removed it.

>You are a liar. It's documented in your own posts.

Poor baby...lost the ability to tell right from wrong. Typical
sociopath's rationalization.

>You make unsubstantiated accusations against
>organizations and individuals alike without the least bit of intent of

>validating your claims.

Like ARRL charging shipping charges on direct orders to
Newington? :-)

Like AOL is a profit-making corporation that doesn't require
extra shipping charges above $25 for reselling ARRL products?
:-)

>You claim to be a professional engineer, yet you can't
>even send e mail without making an error.

Incorrect. I've claimed to be a professional, as in accepting
money for services rendered. I've claimed to be an electronics
design engineer...which I have been in several corporations and
continue to be.

The title "professional engineer" is for a state-licensed engineer
and I've never claimed to be one of those.

>>You have a LOT of problems with property ownership.
>
> Nope. But you may.

Not at all. My wife and I have a lot of real property and it is
dealt with properly and legally. We also have considerable
personal property and it is treated the same way. No debts,
no liens, all free and clear.

> For once I agree with you. Tsk, tsk, tsk. What a shame for an old man
>like you to be so blatantly self-abusive in public with your own misdeeds of
>truth, and then alledge others to be "libellous".

Poor baby. You really lost it. :-(

Get some treatment and come back when you are sane.

Tsk, tsk, tsk. Is aircraft catapulting and naval intelligence photography of bears somehow involved in RADIO? :-)

Are those famous "26 patents" involved in RADIO? [no, it is only one and that is about a mechanical bearing]

Past experience in RADIO, HF radio at that, is not "credentials" but just experience in HF radio. Those who've had it find that those who never had any are murderously resentful of it. Those of us who were in the Big Leagues of HF communicatons on a 24/7 basis are bitterly resented by those whose only experience was in amateur hobby comm or in the much smaller sphere of other government communications.

The FCC administers a service. People engage in the use that
service as a hobby.

Some of them play word games too, of course. ;-)

>> Think about it! Some of the *least* technically inclined Ham
>> operators are the *best*.

Nobody has suggested any such thing, so what is your point?

My point is that technical expertise is not the measure of a
Ham operator, which is an entirely different matter than what
you speak of.

Carl I agree totally with you. The neighbor girl was caught circa 1964 playing her organ on the CB band. Her dad got hit with a $500 fine .... a 16 yr old having a little fun. He could not get out of it. Now look ... even when guys get caught dollars to dem donuts the fines get reduced. I wonder how many ever pay. And that 500 was in 1964 dollars.

The only way that enforcement can happen on a meaningful basis is with user fees ...like it or not.

>
> We've been through all this before.

So you've made up your mind.

I don't believe there are many
> people who can't learn morse code at five words per minute.

Define "many." Of all the people who've shown an interest and taken
the 5WPM exam (in whatever abomination; Morse or Farnsworth), what is
the passing rate?

What?

I don't
> believe there will be any morse test at all within a short period.

A short period of what? Dits? Dahs? Time? What?

Would you mind completing a sentence?

Nevermind. I can't even pretend to be thick like you.

But do you think there should be?

I
> believe that even Len Anderson can learn morse at five words per
> minute.

Why do you believe that? Has he shown any real evidence of having
learned the code?

> After all, he has told us that he already knows morse code.

In what capacity? Scouts flashing lights from one tent to another
during a Jamboree? Now you think Len is Cecil?

> How much of a stretch can it be for him to become "proficient" with it
> at five words per minute?

Larry and Dick claim 5wpm cannot be "proficiency." Ditto 13wpm.

> I believe that morse is used as much in 2003
> as it was in 1998 in amateur radio.

Use a relavent date. Try 1962. Hey, try the Novice Enchancement year
of 1987.

> > I hope I've helped you out on this subject.
>
> Not really.

Hey, I tried. You're simply too thick.

> Why is it so important to you, mighty macho morseman?
> Is US amateur radio some kind of military auxilliary?

It is important as an example of yet another thing which you "know" but which flies in the face of fact--like your knowledge of amateur radio, your knowledge of Department of State communications operations, your knowledge of Department of State Key Officers lists and the like. If it wasn't important, why did you feel it necessary to make the claim?

Oh yeah--"auxiliary" like "Attila" has but one "L".

All anyone need do is read the thread, Leonard. Your behavior fits the
N2EY profile precisely.

I think it was Fritz. Too bad they didn't have the Dale Carnegie courses
back then.

So you didn't go back and refresh your memory. You only know what
doctrine was for the Army in the early 1950's.

> The subject originally was using CW telegraphy as an
> "order-wire" on an RTTY circuit. Illogical procedure.
> Not used by other agencies.

State is not obligated to use what any other agency uses. State was not obligated to consult with you before implementing the system. State had its reasons for using the system. It worked well.

> > It should become an OOK CW circuit
> >> instead.
> >
> >That wasn't for you to decide.
>
> True, but that didn't make it "good" or "logical," did it?

No, that didn't make it good or logical. That it worked and worked well proved it to be both good and logical. Your advice wasn't needed.

True, the FCC doesn't control the DOD, and certainly the FCC isn't going to go in waving a badge. That said, someone said something to somebody and by the time it got to Guam, it was an order from the CNO. The reality of it is that we all have to co-exist and the US has a pretty small percentage of the world population. I'm sure in wartime, the military will do whatever it must - no questions asked.

Yes, it was opinion. I happen to think it was extremely well crafted
and accurate. For it to be a lie, there'd have to be evidence that you
are never guilty of the things written. As anyone can see, I've used
the quote below comments made by you which exemplify actions in the
profile Jim put together. There's no legwork involved in tying the
evidence to the profile.

I believe you will find that the NTIA (National Telecommunications & Information Administration), which operates under the US Department of Commerce, operates the Office of Spectrum Management, which manages the Governments use of the radio frequency spectrum.

The FCC manages the private sectors use of the radio frequency spectrum.

1968 was thirty five years ago, Leonard. "Radio Electronics" is not Radio Craft. Sell anything to Radio Craft lately? It is defunct you know. R-9 is defunct too. It was the predecessor to CQ but CQ is not R-9. R-9 is defunct, much like Ham Radio magazine.

Exactly, Mike, no one has to prove anything WRT ham radio AFAIC, Larry's admonitions aside. You participate where your interests lie, as does everyone. FCC requires nothing more than that one meet the current requirements for the license. From there it's strictly up to the individual. You can become an operator or just remain a licensee. Obviously many if not most individuals move into some level of active interest, often many varied interests within the hobby/service.

We've all got opinions which are formed by our backgrounds and experiences, or the lack thereof.
It's what makes the world go round. Most active conscientious hams who've been around awhile usually find themselves wanting to give back to the hobby some of what they've been given and that's a part of what has historically kept ham radio alive and healthy. What happens to it when or if that disappears would seem to be cause for concern for the future.

Dick

So there you have it. You're not a ham radio operator at all, but
rather an FCC
licensee. You can't seem to find time to get around to actually getting
a rig together
and getting on the air although you've been licensed for "awhile". OK.
FCC nor anyone
else requires you to ever do any of that. You can sit it all out for a
lifetime if you
wish, just as most of the whiners and complainers posting here who have
for so long
decried the license requirements. And make no mistake, that's what this
NG is all about-
the protesters resisting all the "hoops" thrown in their way by -get
this- *us longtime
hams*, particularily old Extras who passed a 20wpm code test! Ain't it
amazing? And
now you sign on, claiming longtime professional service but none as a

ham, and still
you're the original "authority"!

Just another one of them, evidently. Len Anderson, aka "AVeryFineMan",
meet Floyd.
Birds of a feather, flock.

>
> It's a hobby folks.

Ah, another "it's all just a hobby" type. Tell it to the FCC. The day
they start to
consider it "just another hobby" will be the day all that valuable
spectrum is up for
grabs. Like right now. Folks like you speed it along. An avocation it
is, to be sure.
One that demands no more nor less than FCC licensees decide to devote to
it. CB, Tiddlywinks
and coin collecting are "just a hobby". No FCC needed. Ham radio is
more. How much more
-for you- is up to you. So far your not showing signs that it matters
much at all.

> Those tests are *all* meaningless to anyone
> who has worked in the field.

You have a right to your opinion, and that's all it is. FCC doesn't
agree with it,
obviously. Or they didn't untll recently.
Why should you presume that you're the only one here who has worked in
the field? You're
certainly not.

> Someone mentioned getting an Extra
> Class at age 16 and that it was tougher than a 1st Phone.

Read a little closer next time, in fact it seems it would be productive
if you'd just go
back and reread it now, and see if you can thrash out what was actually
said.

> I had
> a 1st Phone at age 16, but by age 20 I'd met at least a dozen
> people who'd been to a 6 week school that taught that test, and
> even though they didn't understand a bit of electronics, they
> were just as legal (and frankly at least a useful to the boss)
> for standing a transmitter watch as I was!

Most of us have known some of the First Phone 'crash school' grads, but
I sure wouldn't
characterize them as being useful as those who learned the material.
Makes one wonder if you
weren't one of them instead of one of us. It's one thing to babysit a

transmitter and
quite another matter to actually work on it or repair it.

Example- I got a call from one of "them" regarding an FM broadcast transmitter he had
been hired to retune to a different frequency than that which had been in use. The tuning
instructions for the exciter were missing and he wanted to know whether he should tune
the output for a dip or a peak indication on the meter. I asked him if the circuit was
a parallel tuned or series tuned circuit. I informed him that a parallel tuned circuit
passes minimium current at resonance, while a series tuned circuit passes peak current
(assuming of course that the meter is monitoring device current supply) so he'd need to know.
He didn't know. He hadn't learned the basics. He couldn't differentiate a series tuned
from a parallel tuned circuit. So I went to the station, took a look at the schematic diagram,
and tuned the exciter, and then the rest of the transmitter, for him. I used my Millen grid
dipper (a fine old piece of Ham Radio test gear) to move the final amp's tuned cavity to the
proper part of its tuning range.

I remember another case, when I was a kid with a new Novice ham ticket. One of the
'crash school' grads was hired as the engineer at the local BC AM. There was a failure
that he couldn't find, so he got my OT ham Elmer, who had no commercial license, to find the
problem for him. It turned out that a mouse had shorted the main power supply.

"Useful" isn't a word I'd use to describe that crash school grad.

Years later I had that same BC Engineering job -and a First Phone- when I got a call
saying that the station was way off frequency. I first did a visual inspection which
revealed the exciter deck tubes all had their plates glowing very red, very definitely
abnormally hot. Quickly checking their voltage supply revealed it to be abnormally high,
by nearly half. A look at the power supply schematic quickly revealed what the problem
HAD to be. It used a double pi section filter with inductive output. Recalling
that an inductive output filter provides average level voltage while a

capacitive output
filter delivers peak voltage, I reasoned that the output inductor
-filter choke- had shorted
across its winding, removing itself from action by becoming a virtual
piece of wire and effectively
converting the power supply filter into a capacitive output filter, thus
raising the output
voltage by X 1.414, to the peak value.

That's exactly what had happened. Replacing that output filter choke
brought the
voltage back down, the tubes back to normal operation and the station
back on frequency.
Total time elapsed, about 20 minutes.
That it didn't melt down or burn something up is a tribute to the
ruggedness of the old
Gates AM BC gear.

Ya got to learn *some* theory to get that far. How much would one of
your 'crash
school' grads be worth here?

So in your view, since some First Phone licenses were issued to
unqualified
individuals, it really doesn't matter whether or not anyone ever did
actually qualify for
one? Did you ever stop to consider that the proliferation of 'crash
school' grads and
the results of their unlearned and unskilled 'efforts' were instrumental
in the FCC doing
away with the license entirely? It sure gave lots of ammunition to those
eager to do away
with commercial radio licensing.
And then maybe that same situation applies to ham radio? So why even
bother with
licenses?

> I can't see either
> the Extra test or the 1st Phone as significant... compared to
> something like working in a modern telecommunications center.

So you worked in a comm center. Most hams have not and never will. So
they then
shouldn't bother to learn anything about the technical material?

To quote a favorite comment of an old Army master sergeant I and a
bunch of other techs once
worked for, "Your experience is somewhat different from mine". And just
for the record I've
worked in (and maintained) a "modern telecommunciations center" -a few
of them, in fact. At least they
were modern at that time. Things do change rapidly these days. I

wouldn't begin to walk in
and try to resume where I left off at retirement 9 years ago.
What does any of this have to do with ham radio?

>
> As for code, the military could teach the average GI to read

> 18 or so.
>

So why all the whining here about 5wpm? It's not rocket science nor in
any way
difficult. It does explain a lot about those doing the whining.

>
>
> I personally like that idea of an Elmer

Where did anyone dispute that? How many hams have you ever Elmered?
How many do you
think I have?
But the first requirement is to have newcomers who want to be Elmered.
That is seriously
lacking in most of the protesting kids (of various ages) posting here.

> . It's a hobby, it is
> *supposed* to be fun. And it is when people at various levels
> get together and exchange ideas, help each other, and generally
> do whatever part of it they are capable of enjoying.

Yep, and when the Brian Burkes and Carl Stevensons sit on their
collective asses half a
lifetime whining about all those "hoops" they refused to jump through,
then continue
long past the time the "obstacles" are gone, don't you ever wonder about
their
motivations? Or did you just start typing here with no background
research at all?

Jim, whoever said that learning radio technology was/is difficult for a bright 16
year old? Sure seems to be
more than a bit touhgh for some of the lesser denizens of RRAP, but that's an
other matter. For sure the level of learning needed to actually pass the old First
Phone tests, and there were several different tests administered, was not trivial
nor "entryplevel". Just as the Extra class exams were not.

There is one very good reason - he doesn't have rational, un-embarrassing answers to give.

Don't bother with your hobby analysis, it's no more valid than your ham radio experience which is
clearly non-existant.
Get back to us after you become something more than an FCC licensee - something

like an actual ham radio operator. So far you're just another Lennie clone - someone who
fancies that his commercial radio makes him an expert on ham radio..

Doncha love all these FCC licensees, and another or two who aren't,
masquerading as ham radio operators?
Most wouldn't make a pimple on the backside of a real one.

That's nice ancient radio stuff, Phil. Ain't the way the LAW
is NOW. Do you need some cites on the establishment of
NTIA and its scope of authority?

>complained to the FCC. Hmmmm ... there **are** international treaties.

The US military is very aware of international treaties and
the US Army regulates its own radio activity. If you need
some ARs (Army Regulations) on that, I can supply them.

However, ALL US government, including military, radio is
coordinated by the NTIA, the National Telecommunications
and Information Agency. Even the CNO of the USN agrees
to that nowadays.

Nowadays there isn't much need for using HF radio for
military communications although the equipment, doctrine
and training is there for using it as a backup method.
However, if there is a national defense need to use some
HF frequency anyplace, the military WILL use it as it sees
fit. If hobbyists want to throw a fit over that, TS.

Ahem...throughout Title 47 CFR, the word "service" is a
regulatory term denoting a type and kind of radio activity.

See Part 95 and a number of "services," one of which is
most definitely a HOBBY. <shrug>

>Check out 97.1 ... to quote:
>ï¿½97.1 Basis and purpose.

Poor baby. Can't get along with those who won't agree with him.

Tsk, tsk, tsk. Needs "bennies" to perform. Not a good thing in
nurses "saving lives."

> Furthermore, I have no concern about how I am perceived in here.

Quite obvious sociopathy, personal hatred to opposition of any
kind is readily observable.

>My "legacy", as I have told you before, exists outside this forum.

Then the "legate" should go outside and DO his "legacy thing."

Demonstrated sociopathy in here IS curable by medical science
but medical science cannot (yet) introduce real smarts into
some amateur's heads.

>My "legacy" exists in REAL deeds...Not what is spewed about in here.

One good thing outside this newsgroup is to review present
practices on blood typing procedures.

> My Amateur Radio "personna" is exhibited ON Amateur Radio...Not a
>flamefest infected newsgroup.

Apparently the great medical legate has not learned the basics
of communicable things. Flames in a newsgroup are started
and maintained by individuals. Sgt Atilllllllla the Ham is one
such example.

> Next?

Goodbye, Saddleback-sore EX-marine, don't let the newsgroup
door hit you in the ass on your way to a real world.

>week. Giving college credit for that would be wrong. Which college does this?

You have to give this poor demented soul some slack. Way back in newsgroup time when he tried to pull off that nonsense about "academic credit for amateur radio experience," I called the college mentioned. The registrar's office gal said she "doesn't really know." A formal letter was never answered.

A couple months later at a local luncheon, I brought up that subject to two instructors at local colleges (Pierce and CSUN), one a licensed amateur, the other having been one. When the laughter subsided they said simply "no credit is given in California colleges and universities for amateur radio activity."

It's a popular theme done by the ignorant of academic subjects. More than a rationalization, those who use it want to puff themselves up more in the mental department than what they are...or have a decided inferiority complex on their status in life. Academic material involving physics is DIFFICULT and should be written in all-caps to prove it. :-)

>The subject material for the test is very good - if one truly mastered those
>areas. One way to make use of this would be to offer ARRL certification

>courses. Its not the same as the amateur radio license. Certifications mean

>believe there will be any morse test at all within a short period. I
>believe that even Len Anderson can learn morse at five words per
>minute. After all, he has told us that he already knows morse code.
>How much of a stretch can it be for him to become "proficient" with it
>at five words per minute?

Why?!?!?

I've never used, or needed to use morse code for any
communications on HF since the 1950s...and I learned
the proper use of "order-wires" back then...which hasn't
changed any since then despite some retirees from State.

>I believe that morse is used as much in 2003
>as it was in 1998 in amateur radio.

I don't "believe" in the FCC's statements of 1990, I KNOW
what they wrote in 90-53. They didn't think morsemanship
was of any value in determining anyone's amateur license
grant then, nor did they believe different 9 years later.

>> I hope I've helped you out on this subject.
>
>Not really.

WE can ALL see that you don't change your Belief system.

There's no need for constant reminders.

No, that isn't misdirection, Leonard. You commented that I am not good
at taking advice. That is yet another thing you know nothing about. I
respond by challenging you to prove that you can take advice. I gave
you some. Are you having difficulties with it already? I'm not
confused, not angry and not enraged. I'm actually having quite a good
time.

> "Cashews" refers to the principal export of Guinea-Bisseau,

I wasn't in the export business in Bissau. The country wasn't a colony when I was there. I was never a "radio officer".

> Poor feller must be nuts, can't focus on anything but
> himself.

Where would that leave you? You seem obsessed with my former employer, my job and cashews.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior."

My statement is correct as written.

> >No one else is authorized to use my callsign.
>
> Quite true. The same thing applies to driver's license numbers,

> hunting and fishing license registry numbers, and many other
> licenses having registry alphanumerics.

Those licenses don't have an associated radio callsign and do not permit amateur radio operation.

> >You are less a
> >participant in the issue of my callsign than you are in amateur radio.
>
> The FCC may take away your license (and the callsign) any
> time they see fit. No staff or commissioner in the FCC is
> required to have any amateur radio license.

I didn't write anything about the FCC. I said that you are less a participant in the issue of my callsign than you are in amateur radio. Why all the babble about the FCC?

> >No, the statement I made is irrefutable fact.
>
> Incorrect.

Easily correct. You snipped it for some reason.

> >Ummmm...again, you weren't remotely involved with any Department of
> >State communications operations ever. You have made a couple of false
> >statements.
>
> Not. While details of US Department of State activities are

> IS quite public

Wow! That's quite a mouthful, Leonard--not fully public, some quite classified, much quite public.

. DSN listings of embassy and consulate staffs
> are an example. If you wish to embellish staff listings as
> "key lists," that is your own title hunger growling. "Key lists"
> is the familiar name of master cryptographic keys, not staff
> listings.

I embellished nothing. I didn't write it. I didn't edit it. I didn't provide the title. The Department of State url below has nothing to do with crypto keys and is not a DNS listing. In fact, it provides only embassy switchboard numbers and offers no extension numbers. You'll note that no one who worked for me was listed. The full staff of the Political, Economics, Regional Affairs Office, USAID, USIS, Peace Corps, etc. are not listed. Shall I repost a couple of Google quotes of the moronic claims you made?

http://www.state.gov/www/about_state/contacts/key_officers99/index.html

Note title. Click on Tanzania. Eat words.

Now you know, don't you, where this is going to lead?

N2EY: "Besides, here's a simple, plain fact:

Something of State's capabilities might be known to someone--certainly
not to you.

> Within the USA international networks of
> radio, State has always been one of the smaller ones. Their
> procedures on HF are generally that of all other HF radio
> communications involving both message traffic and as common
> carriers for messages of several agencies using a network.

That paragraph is simply a load of steamed crap. "USA internationa
networks of radio"? "Procedures on HF are that of all other HF radio
communications"? You're wandering in the desert.

> A term such as "order-wire" is not well-known to radio

> for "order-wire" information exchange makes no sense.

You're surely fouling it up, Leonard. The only reason the use of
CW-as-order-wire was brought up at all was to correct someone (you?) who
claimed that the U.S. government was no longer using morse.

Beyond that, you had nothing to do with it. State was under no
obligation to consult you or advise you. I do find it interesting that
you're still attempting to make some kind of case of it.

> That snow job might have passed unnoticed among a group of
> average radio amateurs, hobbyists who have probably not had

Don't you think people are on to you by this time? Your absurd claim
for origination of the CW order wire *poof* blew up in your face. You
silly State Department Key Officers claim *poof* blew up in your face.
Don't you ever tire of looking goofy?

> >Those have come back to bite you in the ass.
>
> Not mine. :-)

Yes....yours.

> >You have no more way of knowing that than you do of State Department
> >communications operations.
>
> Snow jobs are snow jobs. Some fancy description of government
> activity can't cover up lots of snow.

Right; and the ARRL is dishonest. There is suspicious activity all
around and something is afoot. Children are obtaining amateur radio
licenses. Black helicopters whirl overhead. Some guy who claims to have
worked for the Department of State, claims to have used a CW order
wire. He claims to be appear in the Key Officers List of Foreign
Service Posts and--Oh Damn! He IS in the Key Officers List. You've
told us all about it. Have a nice nap, kindly old gent.

> >N2EY: "Besides, here's a simple, plain fact:

No big lie. No little lie. Remember: All folks have to do is look
above the quote for you comments. Those comments will be all the proof
anyone needs.

> >I have a stake in that I am a participant in amateur radio.
>
> That isn't the principal cause of all this snow job coverup.
> You have a "stake" only because of ego and pride not
> allowing you to give in to any correction. You will insist
> and obfuscate and misdirect any correction of an obvious
> original flaw until you are no more.

You're babbling again. Why do you persist in snipping relevant
material?
What coverup is going on, Leonard? Why would you be correcting me or
the Department of State? Who are you supposed to be?

> >> There shall be NO dissent in the ranks.
> >
> >You aren't in the ranks.
>
> True. My military Honorable Discharge was received in 1960.

Oh. So when you wrote "There shall be NO dissent in the ranks" you
referred only to your own military service?

> >I don't determine whether you participate in amateur radio, Len.
>
> Misdirection again. One does not have to be a participant in
> amateur radio to understand that the alleged CW "order-wire"
> on an RTTY circuit was illogical. Those of us who had been
> in HF messaging for the military and government knew it wasn't
> good procedure.

Why do you keep snipping and drifting? Why the obsession with State
Department order wires circuits? I am, I'll admit, entertained by your
last sentence.
You don't know whether it was good or bad procedure. You weren't
involved.
It's just like your relationship to amateur radio.

> >You'll have to pass the exam if you want to do that.
>
> Continual misdirection. Tsk, tsk, tsk.

We'll never know. You keep snipping the relevant portions.

In neither of these cases was there any mention of a precedent being set, or what the outcome of the case was. Anyone can sue for anything. Wining the suit is quite different. Even if a subpoena were obtained, all you have is the holder of the account. Do you have any idea how common it is for multiple users to post using one account?

I dare say you're right. You've written nonsense before I believe
you'll continue to write it.

> My original
> purpose was to argue against the morse code test for an
> amateur radio license, any class, in the USA. That is
> still my objective.

But you've left out the "civil debate" and you've added much, much more
to that original purpose. Perhaps that is the reason for leaving out
"civil debate".

> Personally taking and passing an amateur radio test was
> not my personal objective, personally speaking.

It was a couple of years back according to your own statement.

> Unfortunately, a small group of anal-retentive macho
> morsemen cannot see arguing anything except from a
> point of view equivalent to their own personal ideals.

...and we all know that we should simply accept YOUR personal ideals as
our goal. Let's all simply take the word of a non-radio amateur on how
amateur radio is to be regulated.

> >You aren't knowledgeable about amateur radio.
>
> Wrong. US amateur radio is one of the most-publicized
> hobby activities involving radio in the United States. The US
> regulations on amateur radio forbid transmission with the
> intent to obscure communications. There is nothing secret
> about US amateur radio.

I didn't write that amateur radio isn't publicized. I wrote that you aren't knowledgeable about amateur radio.

> >You aren't a participant in amateur radio.
>
> True. That's also true of every single unlicensed person who
> might, someday, want to get a license.

I'm pretty sure that there aren't a great many individuals who declare an "interest" in amateur radio spanning several decades and who never ever take action toward becoming radio amateurs. I haven't noticed any of the others haunting an amateur radio newsgroup and making like an expert in amateur radio.

> The FCC does not require any staffer or commissioner to have
> amateur radio licenses, yet they MAKE the regulations regarding
> US amateur radio.

Irrelevant (to use your format). FCC staffers are paid to regulate radio. It is their job. You aren't a regulator of amateur radio. You aren't a participant in amateur radio.

> >Why would anyone be swayed toward your view of how
> >amateur radio should be regulated?
>

keep up with what is going on.

> Shirley, you lack a sense of humor.

That wasn't even funny the few dozen times that Cecil wrote it.

> >Still no amateur radio license either. Maybe if you make a wish...
>
> False argument. Only you were demanding that all have a
> federal merit badge for amateurism to achieve your concept
> of amateurism.

Demanding? No, Len. I'm stating that you are not a participant in
amateur radio. As to my concept of amateur radio, even children may
obtain a license, and they DO so in the here and now. You'll need that
"Federal merit badge" in order to ever become a radio amateur. There is
no way around it.

But how do all those folks not licensed as radio amateurs make up an
ethnic group. You wrote that it was such a group. Enlighten us.

That's certainly strong praise for the U.S. government. As for your
last sentence, it helps you live up to the N2EY profile below:

> >N2EY: "Besides, here's a simple, plain fact:
> >
> >No matter what job, educational level, employer, or

> you keep it up. It worked once for a particular political party in
> Yurp in the 1930s and early 1940s. Feel proud. :-)

I plan to repeat it often, Len. Your responses here are filled with insults, ridicule, factual errors. The excessive use of emoticons is in evidence and so is your generally infantile bahavior. The ethnic slurs showed up right on time. It would be hard to improve upon Jim's quote. It describes you quite accurately.

Incorrect. Doctrine and training for the 1950s, 1980s, 1990s,
and now into the new millennium for the US military...proper
procedures in HF radio from the 1930s onward to about the
beginning of the 1990s.

>
>> The subject originally was using CW telegraphy as an
>> "order-wire" on an RTTY circuit. Illogical procedure.
>> Not used by other agencies.
>
>State is not obligated to use what any other agency uses.

They are not obligated to use any radio of their own. They
could do it all with CW, right? :-)

The "hotline" TTY circuit between the White House and
the Kremlin was run on the US end by US Army Signal
Corps. [that's just an example]

>State was not
>obligated to consult with you before implementing the system.

True enough. State Department is answerable only to the
President of the United States. It's a cabinet function.
Every so often us US citizens "kick out" a President
through a system called a General Election. The honchos
of State usually get kicked out in the process.

>State had its reasons for using the system.

Yes, stubbornness and ignorance, refusal to listen to
other agencies in government. :-)

>It worked well.

"Well?" Deep and wet? I suppose it "worked" about
the same as US foreign policy in the African continent.
Lotsa "success" there, wasn't it?

Did State ever get that bombed embassy rebuilt?

>> > It should become an OOK CW circuit
>> >> instead.
>> >
>> >That wasn't for you to decide.
>>
>> True, but that didn't make it "good" or "logical," did it?
>
>No, that didn't make it good or logical. That it worked and worked well
>proved it to be both good and logical. Your advice wasn't needed.

"...proved it to be both good and logical." Geez, big cheese,
how much other non-amateur HF have you seen? Some ads
in a trade magazine somewhere?

>> >> If an RTTY radio circuit is passing TTY messages fine in
>> >> regular traffic, then it doesn't need any OOK CW for

>> radio, especially that which was worked out years before.
>
>State isn't obligated to use what has been "worked out years before".
>State needed something more reliable than what was "worked out years
>before".

Of course, Mr. Macaroni, on an RTTY circuit one uses CW
for skeds and things because it isn't clear enough to read,
but lets the regular traffic go through on a rotten circuit.
Yeah, sure. Put a feather in his cap.

Geez, at least four decades before the 1980s and State's
foggy brained trust can't look around at other agencies and
militaries who've already done it the logical way?

Arf, arf, arf.....more barking by talking heads doing cover-up
operations to the public.

>
>> >> That's logical. One or the other.
>> >
>> >It wasn't for you to decide.
>>

>
>Ever ask yourself why it is that you always end up looking like the guy
>who has his brogans in his yap? Are you learning anything, Windy?

Don't have "brogans," old-timer. Poor thing...you got bit on the
ass five years ago and your wound still isn't healed! I'd see a
doctor if I were you. But, I'm not you, and I was shown how to
run an HF circuit properly back in the 1950s...by those who'd
done it in the 1940s.

>

Snip all you want, mighty macho morseman. I'll even repeat it
all in quotes so everyone can see it. :-)

For the "big lie technique" to be successful, you need to saturate
the audience, the viewers, with the propaganda. I just know they
will all love to see your constant repetition of someone else's
words. Makes the unemployed (?) one's words almost worth
money. :-)

>1968 was thirty five years ago, Leonard. "Radio Electronics" is not
>Radio Craft. Sell anything to Radio Craft lately?

It's called a Name Change of a publication, expert publisher
wizard. Radio Craft didn't lose any subscribers or advertisers
from the name change, they just did some appropriate legal
stuff and some format and design changes and it kept on being
published as "Radio Electronics" magazine.

>It is defunct you
>know. R-9 is defunct too. It was the predecessor to CQ but CQ is not
>R-9. R-9 is defunct, much like Ham Radio magazine.

Poor thing...you, like your buddy Sgt Putz, just LOVE the idea
of being defunct, gone, dead, a relic. Tsk, tsk, tsk.

Why don't you pass out some R-9 CDs, Mr. Wizard, show us
all about Olde Raddio as you young'ns learned it? Here's a
wizard thought: Send those R-9 CDs to "Electric Radio!"
Liven up everyone. If it is truly "defunct" then there aren't any
copyright restrictions, are there? :-)

Poor Davie. Poor Jimmie. All hurt!

Sound the Hue and Cry! Avenge the sullied hams of the
extra! Light the wood pile and prepare for the Burning to
cleanse the souls of the inquisitors! :-)

>You get worked up over a single typo but you've repeatedly used
>"auxilliary" and "Attilla" even after they were drawn to your attention
>several times.

Awwww... Why don't you scan the appropriate page in the
Hun dictionary and send it to everyone in e-mail? Show
everyone who's Boss in the newsgroup! :-)

By the way, how are those classes in remedial arithmetic
coming along? Memorize the multiplication tables yet?

Remember, 7 x 24 = 168, not 148...

* not "shamus." "shames" is a temple custodian (although
my Anglicized Hebrew spelling may be in error...so TS, take
away my yarmulke). The "temple" in this case is the ancient
cult of the Morseodists.

Well, you have a point. I've only been licensed for 43 years
Dick. It is true that I haven't had time for ham radio for some
time, but it isn't like I wouldn't know what we are talking
about, eh?

Maybe you want to stop and look at what I said instead of making
assumptions.

>and still you're the original "authority"!

I have neither said "none" as a ham, nor have I claimed to be
any "original" authority. But certainly I can claim to have the
experience to make the kinds of comments that I do.

I don't think my technical background makes me a "better" ham
than *most* of the best hams, who almost all have less technical
experience than I do. I'm not impressed with whatever your
technical background is that you think gives you something
special compared to newer less experienced hams. If either of
us are special, that isn't the reason why.

>> It's a hobby folks.

>avocation it is, to be sure.

The FCC *does* consider it just a hobby. Look at the way they administer it! Draw a few comparisons to other services, including CB.

And while you are researching that, look up "avocation" in a dictionary. It means... "hobby". And it is, to be sure!

>> Those tests are *all* meaningless to anyone
>> who has worked in the field.
>
> You have a right to your opinion, and that's all it is. FCC
>doesn't agree with it, obviously. Or they didn't untll
>recently.

Yes they *do* agree with it. We might also note what happened to the 1st Phone license too! And yet, since I worked for many years on government owned radio systems where a commercial license was not needed I worked many very fine technicians who were simply not good at taking tests and never did get a commercial ticket.

I do think the Amateur radio tests serve a purpose at the "entry level". It is indeed a valid, and very necessary, requirement to demonstrate knowledge of rules and understanding of enough theory to presumably operate within those rules.

The Extra Class (and the old Advanced Class too) fill no purpose or need other than as an incentive to reward people for making the effort. It can be a fun thing, not unlike DXCC or WAS or whatever. But it is an experience, and not in itself some measure of a good ham.

>Why should you presume that you're the only one here who has
>worked in the field? You're certainly not.

Who claimed that? But... I am quite clearly one of the more senior members here too. Probably about on the same level as you for example, both as a licensed ham operator where you probably have more experience than I do, and in the commercial arena where I probably have a broader background. I am also not at all alone in what I have been saying, and I think you must have noticed that most responses to what I've posted have supported my comments.

>> Someone mentioned getting an Extra
>> Class at age 16 and that it was tougher than a 1st Phone.

>
> Read a little closer next time, in fact it seems it would be
>productive if you'd just go back and reread it now, and see if
>you can thrash out what was actually said.

I read it right the first time. And the person who made the comment didn't disagree with my interpretation of it, so I fail to see what your problem is. As I said, virtually everyone back then felt the Amateur Extra was the more difficult test.

>> I had
>> a 1st Phone at age 16, but by age 20 I'd met at least a dozen
>> people who'd been to a 6 week school that taught that test, and
>> even though they didn't understand a bit of electronics, they
>> were just as legal (and frankly at least a useful to the boss)
>> for standing a transmitter watch as I was!
>
>
>Most of us have known some of the First Phone 'crash school'
>grads, but I sure wouldn't characterize them as being useful as
>those who learned the material.

DJ's with a 1st Phone who could sign off the transmitter log were highly prized. Dummies like me were considered excess baggage, forced on them by the bureaucracy, because between hourly initials in the log, what good was I! That's why they paid us peanuts too, and it's why I never saw that as part of my future. (An attitude that really annoyed some of the people I worked for while I was going to school, but...)

>Makes one wonder if you weren't one of them instead of one of
>us. It's one thing to babysit a transmitter and quite another
>matter to actually work on it or repair it.

How many people capable of working on it did they need though? Only one, but they can't operate 24 hours a day with that one guy signing the log. Typically they needed one Chief Engineer and a bunch of log signers!

>I remember another case, when I was a kid with a new Novice ham
>ticket. One of the 'crash school' grads was hired as the
>engineer at the local BC AM.

Anyone who hires an inexperienced person as "the" one and only engineer gets what they deserve. What's your point? The fact is the license didn't mean he could do the work, or even ever learn how.

And that is exactly what a couple of us have been trying to explain the significance of to you. Being a ham is similar in a small way, because we've seen here an example of a ham who has passed the toughest test there is, and he still sets a poor example. We can also find many others who will never be able to

pass that same test who happen to be great examples of what a
ham should be.

> "Useful" isn't a word I'd use to describe that crash school grad.

If they weren't useful do you really think people would have
been wasting their time and money on a crash school???? Take
the blinders off. There are useful things and useful people in
this world who do things you don't.

> Ya got to learn *some* theory to get that far. How much would
>one of your 'crash school' grads be worth here?

Are you really so hung up on your own self that you think what
you do is the important stuff and what anyone else does isn't,
just because you are all that smart?

Wow. But, I just don't think so.

> So in your view, since some First Phone licenses were issued
>to unqualified individuals, it really doesn't matter whether or
>not anyone ever did actually qualify for one?

Where do you get off calling them "unqualified"???? They took
the same test everyone else did. They were just as qualified
for the ticket as you or I.

I don't know about you, but I certainly was never qualified to
do the jobs they did, and they weren't qualified to do the jobs
I did. But I did notice that they were getting paid a heck of a
lot more than me!

So I went and found a job that paid more than they got. It
didn't require a 1st Phone either...

> Did you ever stop to consider that the proliferation of 'crash
>school' grads and the results of their unlearned and unskilled
>'efforts' were instrumental in the FCC doing away with the
>license entirely? It sure gave lots of ammunition to those
>eager to do away with commercial radio licensing.

It rather proved that we didn't need those licenses anyway. In
all honesty, the 3rd Class license covering rules and regulations
was more significant than either a 2nd Class or 1st Class.

> And then maybe that same situation applies to ham radio? So
>why even bother with licenses?

You're mixing apples and oranges. I have no problem with things
like the entire concept of "incentive licensing" as it was
implemented in the 50's. But I never saw much purpose in either
the Advanced or the Extra Class, and even though CW was always
the fun for me personally, I don't mind a bit that they've
reduced the requirements to a minimum.

Hence if they had a single license, and it covered rules and regs and had a minimal amount of radio theory and a 5 wpm code test... I would not have a problem with it.

But... I don't mind either if there are 8 classes, as long as we don't deny people significant privileges just because they are not professional level engineers or technicians. I.e., it seems they *have* a pretty good license structure right now! Bravo!

>> I can't see either
>> the Extra test or the 1st Phone as significant... compared to
>> something like working in a modern telecommunications center.
>
> So you worked in a comm center. Most hams have not and never
>will. So they then shouldn't bother to learn anything about the
>technical material?

That is exactly the kind of logic you use that I object to. Nothing I said suggests that people who *want* to learn something should not. The point is there is no reason to *force* anyone to learn that in order to engage in Amateur Radio as a hobby.

You seem to think that just because you have learned something, suffered through an exam, or whatever, that everyone else should do the same. I'm saying that is absurd, and I am the perfect example of why. In the past 40 years I've worked on so many different kinds of communications equipment that it would take all week to remember half of it. There simply is *no* need for ham radio operators to be forced to seek that level of experience just because a relative few of us actually do have it. The fact is I am relatively unique because it is almost impossible to find the opportunity have that range of experience. (I'm fond of pointing out to people that they used to say the Bell System was designed by geniuses to be operated by idiots, while in Alaska we had idiots design the system and it took genius to operate it. The effect was that those of us in operations had an opportunity that just wasn't available in many other places.)

> To quote a favorite comment of an old Army master sergeant I
>and a bunch of other techs once worked for, "Your experience is
>somewhat different from mine". And just for the record I've
>worked in (and maintained) a "modern telecommunciations center"

Most places that means you and a whole raft full of other people, each of you assigned to a single area for months or years at a time. I had the good fortune to work in a system where all of us were expected to do anything.

My point is that you are not implementing what the sarg was implying.

>-a few of them, in fact. At least they were modern at that
>time. Things do change rapidly these days. I wouldn't begin to
>walk in and try to resume where I left off at retirement 9
>years ago. What does any of this have to do with ham radio?

Why do you think the average ham is less of a ham if he cannot
compete with the technical expertise your experience should give
you? I think *you* are another great example of why we
shouldn't measure hams by that yard stick! Requiring, in any
way, that hobbiest compete technically with you or I is
ridiculous.

>> As for code, the military could teach the average GI to read
>> code at 35 wpm, so I can't see much significance to that either,
>> except that it required time and dedication that nobody except a
>> GI just out of boot camp is likely to have once they reach age
>> 18 or so.
>>
>
> So why all the whining here about 5wpm? It's not rocket
>science nor in any way difficult. It does explain a lot about
>those doing the whining.

Please re-read my comment. "nobody except a GI just out of boot
camp is likely to have" the time to devote to it. That's why:
it is just unrealistic.

>> I personally like that idea of an Elmer
>
> Where did anyone dispute that? How many hams have you ever
>Elmered? How many do you think I have?

What does that have to do with anything I've said?

> But the first requirement is to have newcomers who want to be
>Elmered. That is seriously lacking in most of the protesting
>kids (of various ages) posting here.

I distinctly do not agree. As I originally said, anyone who
looks at what people like Larry says (and you support) is *not*
going to see it as a friendly hobby to take up, and they are
not going to open up to anyone like you and ask for help. It
isn't that they don't exist, it is that you are running them
off!

>> . It's a hobby, it is
>> *supposed* to be fun. And it is when people at various levels

Clearly you are mistaken. My ham radio experience started in
1960, and I've held a ham ticket for 43 years now.

> Get back to us after you become something more than an FCC
>licensee - something like an actual ham radio operator. So far
>you're just another Lennie clone - someone who fancies that his
>commercial radio makes him an expert on ham radio..

Not quite correct Dick. My commercial experience gives me a
technical background that very few ham operators even realize
could exist, but my less extensive background as a ham operator
also happens to be not exactly insignificant.

I've pounded brass on the low end of 40. I've been in a pile up
on 20 phone. I've operated an RTTY station for years, back when
a Model 15 was a thing of beauty. I've modified about as many
ARC-5 sets as anyone. None of that makes me special in any way
that I know of, so I just don't see what you think makes you so
special.

But you know, I never did use a linear, and I never did put
one of those chips on my shoulder...

My point was that technical knowledge certainly IS one of
the measures of a ham ... and 3 of 5 points in the "basis and
purpose" of the service, as outlined in Part 97.1 point to that.

Agreed that it's not the ONLY measure ... good operating
practices, courtesy, helping others, participating in emergency
and other public service communications, and many other
measures also exist.

The idea is balance ... to only be good at one thing leaves one
lacking in other important areas.

Do you agree with this?

73,
Carl - wk3c

Hey Vippy, I DID read what I wrote, and who gives a rat's kazoo what YOU
think, other than for comical relief...?!?!

>Using a question pool format, most people can pass the test within a
>week. Giving college credit for that would be wrong.

Please cite YOUR credentials in education that make YOU qualified to
determine what should and should not be given credit for electives.

The time frame and circumstances under which credit was granted was
discussed several times, including within the last 2 weeks. Please pay
attention.

>Which college does this?

Colleges...Emphasis on the plural.

Orange Coast Community College in Costa Mesa, CA, and Saddleback Community
College in Mission Viejo, CA. As I said before, this was as late as 1991, and
I have not been in CA since 92.

They also granted credit for other "life experience" achievements such as
the GROL, Private Pilot's license, and certain military vocational programs.

Please pay attention in the future.

>>First, it's a service, that some people choose to pursue as a hobby.
>
> Ahem...throughout Title 47 CFR, the word "service" is a
> regulatory term denoting a type and kind of radio activity.

Ahem...It's a radio service that SOME people choose to pursue as a hobby.
THAT is a FACT substantiated by FCC policy.

>See Part 95 and a number of "services," one of which is
> most definitely a HOBBY.

The Citizen's Radio Service, Family Radio Service, Radio Control Radio
Service, etc, combined under PArt 95 are radio SERVICES that many people use AS
a hobby.

Just as no Amatuer is FORCED to use a specific mode, neither must one use
any of the subparts of Part 95 as a hobby.

Parts 95 and 97 both have specific "Basis and Purposes", neither of which
use the word "hobby". As a matter of fact, "service is repeated frequently
while "hobby" is not used at all.

>>NOWHERE in Part 97 does it refer to ham radio as a hobby ... it's a service.
>
> What about the Radio-Control Radio SERVICE?
>
> That's in Part 95. Want some more "services?"

The cited paragraph went into dettail on Part NINETY SEVEN. So what's
with this diversion to Part 95...???

>>While I will admit that someone can be a polite, courteous,
>>"good" *operator* with little technical knowledge, that does
>>not mean that we should encourage folks to believe that
>>technical knowledge has no merit or value and they should
>>all become techno-ignorant appliance operators.

>
> Like ARRL charging shipping charges on direct orders to
> Newington?

If it costs $3.00 to ship it, what does it matter if it's across town or
across the continent? If someone is too lazy to drive across town to pick
somehting up, they deserve what they get.

But that STILL doesn't "validate" the charges of "fraud" and "dishonesty"
that you have alleged against the ARRL, Your Scumminess.

>>You claim to be a professional engineer, yet you can't

this?

Well Vipul, (I'm assuming that's your name. Please correct me if I'm
mistaken.)

I went to school for aeronautical engineering and for my degree project, I chose 'The Design and Construction of a Yagi-Uda Directional Antenna.' The degree project was worth two credits and was a prerequisite for graduation. You must chose a technical topic and submit it to the professor for approval before you begin work.

Now for most AROs, this is a nice and fairly quick exercise in research and paper preparation, which worked to my advantage since I was also working full-time while carrying a full semester load. So while AR may not be "overtly" worth college credits, it certainly supplies one with more tools in his/her tool box...and an almost limitless supply of subjects from which to choose. My 15-yr. old niece has also written a paper for science class on AR. (W/a little help from her uncle.) How many kids do you know who'd choose Samuel Morse as the subject for his/her history (NOT science!) class. Really stands out in a sea of Abraham Lincoln and Thomas Jefferson papers. A+ for originality alone. Something to think about the next time you hear someone talk about how outdated Morse/CW is. It ain't all about dits and dahs. ;-)

--
73 de Bert
WA2SI

P.S. My degree project professor turned out to be a Tech+ and head of the college ARC. Grade: A.

> Jewish words for "dickhead?"

Who was citing another branch's performance, Lennie?

We ARE discussing YOU...And you ARE a PUTZ.

That the U. S. Army tolerated your BS for eight years was a milestone of
patience. I wudda parked your behind on the DMZ with a rifle and a pair of
binoculars.

Of course, knowing you, you would have been looking the wrong way and
some GI or SKN would have gotten shot by you.

>outdated requirements removed?
>

Brian:

Define an "outdated requirement." If you're going to answer that code
testing is an "outdated requirement," then why wasn't it eliminated as
soon as single sideband became widely available? Keep in mind that
by then we also had RTTY capability as well. Anyone involved in
amateur or professional radio communication could have easily
argued that testing for code proficiency was an "outdated requirement,"
but that simply didn't happen!

Personally, I don't think it's possible for an amateur radio operator to
learn too much about operational theory or practical communications
skills (like Morse/CW). Therefore, hardly any knowledge required for
licensing in the past can be considered an "outdated requirement."
And, IMHO, the only motivation for arguing against this premise would
be laziness.

Bill:

Nice try, and you have my most humble thanks. However, I fear that
you have wasted your valuable time. Kim and her newfound YL fellow
traveller Jackie aren't the least bit interested in hearing about what I'm
really like in person and my enthusiasm to help fellow hams explore
new modes. They're probably far too indoctrinated in popular Feminist
culture to think of me as anything other than a mean-spirited, misanthropic,
misogynist ogre who hates his fellow man, especially if they're women.
However, quite the opposite is true. I only want what is best for my
fellow man, and particularly my fellow amateur radio operators. I dare
say I am a bit more qualified to know what that is than they ever could.

This notion that amateur radio needs to be some kind of all-inclusive,
politically-correct, touchy-feely bunch of happy campers all gathered
around the campfire singing "Kumbuya" is largely propaganda of the
ARRL, which has an agenda to stay in business as long as possible. To
do this, they need to keep amateur radio viable as long as possible, and

they've tried every trick in the book to do that. This includes their lack of action to support relevant licensing standards, even to the violation of their own 1993 Board of Directors resolution to do so. Kim and Jackie are child-like in their lack of understanding and their reactions to reasonable, mature judgments made by those qualified to do so. Just like the new generation of anti-war protesters, they are not going to be convinced by any argument counter to their own point of view. If either of them made an attempt to work me on-the-air using digital modes as we did, they might change their minds about me, and that would be a terrible inconvenience to them.

Agreed!

> > I, for one, have REPEATEDLY stated
> > that, while technical proficiency could/should be improved in our
> > ranks, that there should NOT be anything even remotely approaching
> > an EE level of knowledge requirement.

And we have had numerous discussions here about how the written tests
could be made better - not harder. As I recall, Carl and I agreed on
many if not most of those issues.

For the record, I passed the old Advanced and General writtens at the
age of 14, in the summer when I was between 8th and 9th grades. Passed
Extra written at the age of 16, in the summer when I was between 10th
and 11th grades. Would've gotten the Extra earlier but for the
then-required 2 year experience requirement. That was back in the bad
old days of FCC secret tests, etc., and it was not unusual back then.
No handsome paycheck back then, either.
>
> Now Carl, is that false for every Extra on here, or just for you?

False for Carl and false for me, too.
>
> > > They really do want something for nothing.
> > >
> > Also blatantly false ... all we want is to eliminate an outdated,
> > unnecessary
> > requirement that only serves as a barrier to entry by qualified people (the
> > Morse proficiency requirement).

That goal has already been achieved here in the USA, because there's
no way a reasonable person could consider the current 5 wpm test as a

"Morse proficiency requirement". That test is simply a demonstration
of a single basic Morse skill, at an entry level.
>
> I think you completely misread my comment.
>
> And I agree with eliminating outdated, unnecessary and superfluous

Me, too.
>
> But please reflect on what some of the PCTA Extras have stated
> regarding current theory exams.

Like what?

> As far as the code exam goes, does
> Extra Dick want the elimination of outdated requirements? Does Extra
> Jim want outdated requirements removed?

Who is "Extra Jim"?

If you mean me, then I'll say that I've always been FOR the
elimination of outdated requirements. Like removing questions about
the Advanced subbands from the tests, because no new ham really needs
to know that stuff since no new Advanceds are being issued.

I also say that the code tests are not an outdated requirement. YMMV.
>
> Nope.

You are mistaken. You're repeating the old Cecil trick of assuming
your conclusion.

There was a time when an employer or educational institution
considered the possession of a ham radio license as a significant
qualification. I know that when I applied to EE schools in 1972 my
Extra class license made at least some difference in getting admitted.
(I was accepted at every school I applied to, btw). Does that same
situation exist today? I don't know.

None of this is meant to mean or imply anything negative about new
hams or old ones. But the written tests can and should be made better.
Many of us suggested ways of accomplishing this to the FCC as part of
the 2000 restructuring.

Once is a typo, Len. If I used "inance" more than once, it could be
considered misspelling--much like your use of "Attilla" or "auxilliary".

Just a statement of fact, Leonid.

> Is Alec Baldwin a radio amateur? Is George Bush a radio amateur?

Why no! There is common ground between you, the President and Alec
Baldwin!

None of you holds an amateur radio license. Where you differ is that
the President nor Baldwin expressed a decades-long "interest". I don't
recall either one posting here regarding his views of how amateur radio
should be regulated.

> Note: This is an amateur radio newsgroup, not a motion picture

I didn't write anything about Yugoslavia but I recognize that like Ham Radio magazine, it is defunct.

Phil retired from the State Department? Be sure to let him know that those sorry immigrants should get their act together and begin referring to themselves as "natives of the former Yugoslavia/Jugoslavia".

PAH!!!! You're hilarious, Larry. 'Zat why some of the more respected (and accomplished, I might add) hams in this newsgroup *also* express such high regard for you?

Yeah...thought so...

It's going to be doubly difficult for you, Leonard. First you'll have
to obtain a license at least one level higher than the entry level.
Afterward, you can proceed to attempt your downgrade. Let us know how
it works out.

:-) :) :>) ;-)

Well clue us in. Where is it?

> Ah...! A REAL clerk job! Rear-area, too!!

How does writing news releases and reading them on-air for radio and
television stations equate to a clerk job, Leonard?

Thanks anyway for further input in your continuing effort to live up to
the N2EY profile:

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

> >I never encountered ditty-boppers in any of the several
> >rock and blues bands of which I was a member. While a couple of the
> >electronics distributors I worked for had hams as employees (I even had
> >a radio amateur, W8PBX as a sales manager at one place), none were real
> >CW aficionados.
>
> Hmmm...rock music, sales clerk for a distributor (several),
> knew some hams...that made you qualified for State? :-)

You read "outside salesman" as "sales clerk"? I not only know some
hams, I am a licensed radio amateur. I was a radio op in the military.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

> through a system called a General Election. The honchos
> of State usually get kicked out in the process.

The only "honchos" who leave are the Secretary of State and other
political appointees to include some ambassadors. Everyone else stays.
That is the reason for the existence of a professional foreign service.
I'm surprised you didn't know that.

> >State had its reasons for using the system.
>
> Yes, stubbornness and ignorance, refusal to listen to

>
> "...proved it to be both good and logical." Geez, big cheese,
> how much other non-amateur HF have you seen? Some ads
> in a trade magazine somewhere?

Get ready for the N2EY quote. Three of my four years in the military
were spent entirely in HF communications. I have ten years of
additional State Department HF experience. I have almost forty years of
HF amateur radio experience. Now here it comes:

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

Why that's a simple matter. All that is necessary is for someone to
read the profile and then read some of your posts. It is plain to see
that you actually do what the profile says you do. You yourself provide

the proof, time after time.

> Poor thing. Pointed out the illogical radio procedure

They're repeated because you continue to live up to them. No, they
aren't my words. That's why I quote the material written by N2EY. I
don't believe I could improve on them. They're accurate.

So all anyone has to do is read what you've written above, read the N2EY
quote below and decide if you fit the profile.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

> full-page ads in newspapers, lease billboards nationwide. Get
> some donations and buy air time.

Thanks for you ideas but reposting it here seems to work just fine.

> Run the big lie technique as far as it can go.

I've explained this before. Nothing is a lie which can be plainly seen
to be true. Your own actions prove the statement to be true.

> No problem with
> me. I've seen good propagandists at work. You're not a good
> propagandist. You're just a little two-bit character assassin on
> a newsgroup too filled with himself to give in on anything.

Your paragraph above is a good example of proof of the N2EY quote.

>
> >> >What was the percentage of those taking the aptitude tests which showed
> >> >little or no aptitude for learning morse again, Leonard?
> >>
> >> You tell us, mighty macho morseman from the wilds of
> >> the African experience. :-)

> Past!!!!

The past is filled with examples of you living up to the N2EY quote.
You do exactly what it is that Jim said you do. You've done it again in
your paragraph above. You can't help yourself.

> [this is a total box of laughs...up-tight anal retentives having
> this fiendish delight in character assassination...:-)]

For this to be character assassination, your actions would have to be
other than those described by N2EY. Your actions are not different.
They are the same.

> >> >That's funny. Air Force DI's at Amarillo routinely referred to Basic

government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

> Now you want to misdirect all about Basic Training versus
> Boot Camp! :-) :-) :-)

Someone else referred to boot camp. Though you know little about what
goes on in the Air Force and though you now claim that any discussion of
the term "boot camp" is misdirection, you felt compelled to make a
statement that the term "boot camp" is not used in the Air Force. You
were wrong (again).

> >Oh yeah--"auxiliary" like "Attila" has but one "L".
>
> Oooooo! Your spell-checker IS better than mine?

Is it? My dictionaries would certainly appear to be better than your
spellchecker.

> You are the definitive etymological guru on Hunnish?

I don't believe the Huns ever used the term "auxiliary".

It's in the works, but you know how slow the government is on some
things.

Keep in mind that
> by then we also had RTTY capability as well. Anyone involved in
> amateur or professional radio communication could have easily
> argued that testing for code proficiency was an "outdated requirement,"
> but that simply didn't happen!

That's laughable. We're the only ones still arguing about it because
we're the only ones still using it.

> Personally, I don't think it's possible for an amateur radio operator to
> learn too much about operational theory or practical communications
> skills (like Morse/CW).

Personally, I think your right. But universally, learning about
something doesn't always culminate in a government examination.

Therefore, hardly any knowledge required for
> licensing in the past can be considered an "outdated requirement."
> And, IMHO, the only motivation for arguing against this premise would

> be laziness.

Larry, you've been saying that for years, but the government is about to say otherwise.

No more than YOUR presence here is a vendetta against Amateur Radio for whatever reason, Lennie.

Your ENTIRE "argument" here is nothing BUT a personal vendetta, launched for whatever reason. No more...no less.

>Repeat it and repeat it and repeat it as long as
> you like. It will soothe your terribly-injured ego, won't it?

Speakinging of "terribly-injured"...I know you don't see it, but it is ever-so-evident in everything you post, especially when you start back on that "engineer-vs-Amatuer" rant. Somewhere along the line you bumped up against some Amateur who not only THOUGHT he knew more than you, but probably did...And you've been hell-bent on avenging that event ever since...And now we are stuck with you and your vile spewings.

THAT is YOUR "retribution".

Steve

>
> Ahem...It's a radio service that SOME people choose to pursue as a
>hobby. THAT is a FACT substantiated by FCC policy.

Not really "fact," just political phraseology common in many
many pieces of legislation, rules, regulations in the USA.

The word "service" is a regulatory term denoting a type and
kind of radio activity all throughout Title 47 CFR. It isn't a
military service, it is not a table service, it is not a service
elevator or a service entrance.

> The Citizen's Radio Service, Family Radio Service, Radio Control Radio
>Service, etc, combined under PArt 95 are radio SERVICES that many people use
>AS a hobby.

Does Part 95 specifically say the word "hobby?" :-)

> Just as no Amatuer is FORCED to use a specific mode, neither must one
>use any of the subparts of Part 95 as a hobby.

Note: A-M-A-T-E-U-R, not "amatuer." Tsk, tsk, tsk, common
mistake under rage of typing...

So, does the Hun think that model aircraft radio control is some
kind of service to the aircraft industry?

> Parts 95 and 97 both have specific "Basis and Purposes", neither of which
>use the word "hobby". As a matter of fact, "service is repeated frequently
>while "hobby" is not used at all.

Tsk, tsk, tsk. That sounds like all those servicemen and
servicewomen have to do national duty or something, doesn't
it? :-)

Okay, if it isn't an avocation or hobby, is it a regligious calling?
You know, like a "cult?" :-)

Is the word "fun" or "enjoyment" anywhere in Part 97? No?
How about "recreation?" No? Does that mean no one can
have any fun or enjoyment or recreation with ham radio?

Oh, by the way, is "ham" radio anywhere in Part 97? Better
go look it up. :-)

> The cited paragraph went into dettail on Part NINETY SEVEN. So what's
>with this diversion to Part 95...???

Note: D-E-T-A-I-L, net "dettail." Tsk, tsk, tsk.

What "diversion?" Does Part 2 or Title 47 CFR involve regulations
of amateur radio? It does. In any Part of Title 47, any regulation
regarding transmission out of codified limits apply to all other
Parts.

> He's talking about good operating skills and the importance of
>encouraging technical competence, and you come off sleighting him for it.

Note: S-L-I-G-H-T-I-N-G, not "sleighting." Tsk, tsk, tsk.

Please no snow jobs and sleighing through the snow...:-)

> Why don't YOU get the one you said you were going to get, and then tell

>
> Uh huh.

I've given a list of my employers in here. You haven't verified anything from them. I've given the callsigns and names of licensed radio amateurs whom I've worked with (not complete) in here but you've not verified anything.

You resent anyone who has radio-electronics experience and who disagrees with your opinions. That's a personality problem you have, your own, not anyone disagreeing with you.

>>Sometimes mistakes happened.
>
> Judging from conversations I had with folks at Johnsville, they happened
>a lot when you were around.

You've not had any "conversations with folks at Johnsville" concerning myself and any project work there. First of all, I was never employed at the Naval Air Development Center, Warminster, PA, but a full time employee of RCA Corporation in the early 1970s. Katapult Kellie tried to imply otherwise in a small attempt to start a flame war but he was wrong. Secondly, the time period was in the early 1970s and the military personnel at NAS Warminster (the one-runway airfield across the road from NADC) were USN, not USMC.

The only "accident" or "mistake" at either NADC or NAS Warminster occurred at the airfield when the NAVSTAR test crew lowered the wings of an RA-2 onto the top of a yellow-painted service truck to check the top blade antenna on the RA-2. Minor damage to the right folding wing of the RA-2. I was not involved in NAVSTAR tests at NADC, but that project crew had lab facilities at NADC adjacent to the lab facilities used by the RCA SECANT program.

NAVSTAR was an eventual success. It is now known as the GPSS.

SECANT and a similar, competing system for aircraft collision-avoidance by Minneapolis-Honeywell were technical successes but political influences favored a relatively untested system from MIT and became the limited-use ATCRBS found

now only on large air carrier aircraft.

>>We knew how to correct those and then corrected it.

> "We"...?!?! More like "they"...Especially when "they" didn't renew
>contracts or moved you elsewhere.

Tsk, tsk, tsk. Still so involved in Personality Conflicts that
you can only see imagined fantasies generated by others?
That's rather sick as well as ignorant of the larger world of
electronics. [short-time purchasing agent temps don't get
to see much]

Government contracts have had fixed times to completion
for years, with many controls over funding and over-run
(both time and money) penalties. R&D contracts may have
some slight flexibility negotiated but none of that is in any
way "automatically renewable" or even extendable. A
contract time is for a certain period and that is that.
Companies engaged in that work realize that and try to get
other work to take over when a contract normally ends.
Quite often a development group must dovetail previous work
with phasing-in on a new contract project. That is quite
normal. That is business, professional work.

When the first air tests of SECANT were completed, there
was still a great deal of data reduction done by both RCA
and NADC personnel. That was done. RCA Electromagnetic
and Aviation Systems (EASD) based in Van Nuys, CA, did
the required part of that SECANT contract in California, not
in Pennsylvania. Similarly, the Minneapolis-Honeywell
group did theirs in Minnesota; their air tests were planned
at different times at NADC to avoid aircraft scheduling
problems. Both corporate contract groups used analysis
data to modify systems and procedures for a second phase
of tests for this DoT-funded overall project (NADC was tasked
with administering the tests and providing common facilities).
Both corporate systems operated at 1.6 GHz with permission
of the US government specifically for this project; those
permission details were worked out by legal staffs as part of
contract administration and were not handled by technical
project groups.

Second phase of ground and air testing was successful for
both corporate groups. A third phase was to design pre-
production flyable prototype versions that incorporated data
recording interfaces and separate in-flight magnetic recorders
compatible with the NADC CDC main computer. That was
done at Van Nuys for the RCA SECANT third generation.
Form factor for each transponder was a 1/3 ATR case in size
using a simultaneous 8-band SAW filter (1 MHz bandwidth
quartz substrate SAW filter for a 1 uSec received pulse

width in a "matched" filter) with an LSI digital tracking servo and threat computation. RF section was essentially frequency-hopping over a limit of 8 frequencies using PIN RF switches for speed. Environmental testing was complete and the CDC computer interface already tested in the summer of 1975, hardware was ready to fly. Higher levels in DC cancelled the third phase air testing of both RCA and M-H equipments, opting to adopt the limited-test MIT system to be compatible with existing ATC equipments. Political decision out of both corporations' hands and into old-school buddies at the Haystack.

Meanwhile, 1972 through 1974, RCA EASD worked out an accurate low-L-band RIHANS (River Inland Harbor Area Navigation System) with a +/- 3 yard accuracy anywhere below the radio horizon. That was field tested at both San Pedro harbor area of Los Angeles and along the Houston Ship Canal outside of Galveston, TX. The R&D project group deployed en masse in three groups to Galveston to field test it with USCG officers monitoring the test and following the annual NOAA survey crew at Galveston to insure accuracy from selected land points. That bracketed the Easter weekend of 1974; I was on-site there in the first group. RIHANS was a pronounced technical success even if the Galveston shipyard area presented an enormous number of multipath problems to another system.

What was not foreseen was the success of NAVSTAR which had just begun air testing on the east coast (at NADC) and its modifications into what is now GPSS. Department of Transportation cancelled the RIHANS program due to budget problems despite a ship collision that occurred in the Houston Ship Canal during the Easter holiday time (was not at all involved with the RIHANS testing). The RIHANS technical testing was a complete success. At least seven patents (assigned to RCA) resulted from both SECANT and RIHANS projects.

In late 1975 RCA Corporation was in negotiations with General Electric on the purchase of RCA by GE. RCA decided to eliminate EASD en toto, electronic warfare engineering transferred to Space Division (somewhere in New England), selling the Commercial Aviation group to Sperry, and just cancelling other groups such as Position Location Engineering (my group). Although the GE purchase negotiations dragged on for a few more years, EASD downsized over the next three years until it was eventually gone and the building complex leased to James B. Lansing Sound and a number of smaller firms. [JBL made the Cadillac of speakers and enclosures]

I can write of the preceding because it is public, unrestricted information. I cannot write of other things which are restricted or still under a Non-disclosure agreement. I was a full-time employee of RCA Corporation for 8 years beginning in late 1967 and in a position as Staff Engineer doing electronics and radio design. Contrary to Katapult Kellie's statements, I was never a "temp" or "job-shopper."

That was an interesting time to be engaged in R&D. Outside of having to do a job search afterwards, I regret not being a part of a "white paper" proposal by manager James R. Hall (still KD6JG, now retired and living in gold country of central California) for a completely solid-state commercial aircraft radar...Gunn Diode transmitter with coded pulse train having same average power but without the peak power of a magnetron, LCD display screen, SAW transversal-finger dechirper to both time-collapse the return echo into a short pulse and to near cancel interference and "rabbit spokes." The group had experience with all those subsystems but none were in the same project. No magnetron, no klystron, no CRT needed. Totally solid-state and compact, lightweight. Something similar was on the aircraft market over 20 years later.

>> Incorrect. I've claimed to be a professional, as in accepting
>> money for services rendered. I've claimed to be an electronics
>> design engineer...which I have been in several corporations and
>> continue to be.
>
> Obviously not a very competent one.

Any cursory background check of personnel departments will show continuous employment, never being fired for any alleged incompetence. Your charge is bogus.

> With good reason...You are neither very professional nor does it reflect
>anything approaching what one would expect from an "engineer".

Just how is a former short-term purchasing agent suddenly any judge of what constitutes an "engineering attitude?!?" :-)

I am a Life Member of the IEEE, a professional organization.

> Ya Putz.

That continuing ending comment from an amateur does not induce any desire to become a similar amateur. :-)

Since radio preference is highly subjective, I'd rather purchase the radio myself. If someone wants to give a gift, there are plenty of accessories to select from. The accessories don't require a license to use, so no license would be needed during purchase.

I agree, Dan. I don't see an extra expense involved to "maintain" a vanity callsign above and beyond any other callsign. If there is no extra expense involved, why charge extra for it?

Lets even that out. At 16, did you think that an Amateur Extra should
have had to know more than you knew, having just freshly passed the
exam and your head full of 1962 theory?

Do you enjoy a handsome paycheck today, courtesy of a career as an
Engineer?

> > Now Carl, is that false for every Extra on here, or just for you?

Are you saying that the treaty has already been broken?

Are you saying that the Morse Exam presents no barrier to every
American who has ever had an interest in Amateur Radio?

> > I think you completely misread my comment.
> >
> > And I agree with eliminating outdated, unnecessary and superfluous
> > requirements.
>
> Me, too.

Yet the exams, which have more material at a complexity far greater
than the exam you took at age 16 is just not enough for you to be
satisfied with the present crop of Extras?

> > But please reflect on what some of the PCTA Extras have stated
> > regarding current theory exams.
>
> Like what?

Extra Dick refuses to administer the exams anymore, current crop of
examinees aren't worth the effort.

Extra Bruce, using himself as an example, says anyone can pass Extra
because the exam is worthless.

Extra Larry refuses to accept post restructuring Extras as anything
except floatsam.

Now Extra Jim says the current exams could be made "better."

> > As far as the code exam goes, does

From K4YZ:
>Orange Coast Community College in Costa Mesa, CA, and Saddleback Community
>College in Mission Viejo, CA.

I did not see it in the academic programs section. I cannot find credit for amateur radio license. You still did not prove the colleges you mentioned gives college credit for an amateur radio license. Please post a webpage link or something.

Lenover21 said:
>>A couple months later at a local luncheon, I brought up that
>> subject to two instructors at local colleges (Pierce and CSUN),
>> one a licensed amateur, the other having been one. When the
>> laughter subsided they said simply "no credit is given in
>> California colleges and universities for amateur radio activity."
Then K4YZ responded:
> NEITHER of which were the colleges mentioned... ! ! !

It does not matter if it is not the colleges mentioned. Colleges transfer credits from ACCREDITED courses. (Just read the college admission policy and you will see this statement).For example, I can transfer credits from a circuit analysis course, but not this "amateur radio license course credit".

Since those other colleges do not recognize the amateur radio license as an accredited course, an amateur radio license is not equivalent to college credit.

>BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! !
>
> Now you look absolutely INFANTILE!

Seems to describe yourself. Were you looking in a mirror when you wrote this?

>Thanks for the laugh! Now you finally HAVE made yourself look COMPLETELY
>idiotic!

How about college credit for an amateur radio license? How does that look?

From "Bert Craig", wa2si

>I went to school for aeronautical engineering and for my degree project, I
>chose 'The Design and Construction of a Yagi-Uda Directional Antenna.' The
>degree project was worth two credits and was a prerequisite for graduation.
>You must chose a technical topic and submit it to the professor for approval
>before you begin work.

I agree completely with that. In fact, in a previous post I mentioned that ARRL publications have great material that would be useful in an academic class. I mentioned that if the professor included ARRL publications in the list of publications for the course, the course would have been much better. Also, I suggested a lab component to the course with practical projects, such as those in an ARRL publication.

>Now for most AROs, this is a nice and fairly quick exercise in research and
>paper preparation, which worked to my advantage since I was also working
>full-time while carrying a full semester load.

Having an amateur radio license from high school, and actually building projects during breaks, gives one a good advantage. Some projects could be used later in college course projects, with slight changes. This saves time and improves your chances for a good grade.

>So while AR may not be
>"overtly" worth college credits, it certainly supplies one with more tools
>in his/her tool box.

In one class, I used an antenna Handbook to help me with a mini project (not as big project as your project). I borrowed the handbook from a Ham at a club meeting.

Uh, speaking of not knowing what someone is really like in person, Larry...
don't break your leg when you come back down after jumping to all those
conclusions.

I would be interested in having a QSO with you if you would show a little
class and quit coming down so hard on the newer ops. From what I've seen
here, though, you aren't a very nice person. That's the ONLY criteria on
which I could judge you by, since I don't know you personally. But your
written words are speaking volumes to me. I never said you're a
misanthropic, misogynistic ogre; you are putting words in my posts that
aren't there. I just think that here, you act like a jerk, and an arrogant
one at that. I don't think I'm wrong. Maybe you're a helluva nice guy on the
air and in RL, but seeing how you act on this newsgroup makes me hesitate to
want to know you in RL or have a QSO with you on the air. I don't suffer
arrogant people too well.

> > However, quite the opposite is true. I only want what is best for my
> > fellow man, and particularly my fellow amateur radio operators. I dare
> > say I am a bit more qualified to know what that is than they ever could.

I never asked for AR to be some touchy-feeley kumbaya thing, anyway. Why you
feel that you need to act like an arrogant know-it-all here is really still
puzzling me. You're not winning friends and influencing people. Maybe that's
just the way you want it. Suit yourself.

Jackie

>> Ahem...It's a radio service that SOME people choose to pursue as a
>>hobby. THAT is a FACT substantiated by FCC policy.
>
> Not really "fact," just political phraseology common in many
> many pieces of legislation, rules, regulations in the USA.

Yes..it really is FACT. 47CFR97 refers.

>The word "service" is a regulatory term denoting a type and
> kind of radio activity all throughout Title 47 CFR. It isn't a
> military service, it is not a table service, it is not a service
> elevator or a service entrance

Yep..."type and kind of radio activity". And NO WHERE in Part 97 (or 95,
or any other Part that I am aware of...) does the FCC use the word "hobby".

>So, does the Hun think that model aircraft radio control is some
> kind of service to the aircraft industry?

No, Babe, he doesn't. But neither is Part 95 the exclusive domain of the
hobbyist.

>Okay, if it isn't an avocation or hobby, is it a regligious calling?
> You know, like a "cult?"

If you and Vippy say so. The FCC says it's a radio SERVICE.

>Is the word "fun" or "enjoyment" anywhere in Part 97? No?
> How about "recreation?" No? Does that mean no one can
> have any fun or enjoyment or recreation with ham radio?

Nope...but neither does the Tennessee Nurse Practice Act say anything
about "fun", but I have fun with my job. I also "enjoy" my job, yet the Act
doesn't say anthing about THAT, either.

Your point was...?!?!?

>Oh, by the way, is "ham" radio anywhere in Part 97?

Nope. But then I usually refer to it as AMATEUR Radio, Lennie.

Again...Your point...?!?!

>> Why don't YOU get the one you said you were going to get, and then tell
>>us, Lennie?
>
> Get what?

Uh huh...just what I thought.

>> Ya PUTZ!
>
> Calling others "dickhead" in a language not native to you does
> not absolve you, dill instructor.

Still doesn't absolve you of being one, either, Lennie, now dos it?

Ya PUTZ!

Wasn't that tough for me, and I'm sure not the sharpest knife in the
drawer...;-)

>Sure seems to be
>more than a bit touhgh for some of the lesser denizens of RRAP, but that's
>an other matter.

I don't really know. I learned the stuff for several reasons:

1) I was interested
2) I wanted the license
3) I needed to know how to build my rigs

Once upon a time, just getting a rig on the air with a clean signal required a certain amount of techno-smarts. Hamming on a limited budget required even more know-how. Today that's not so important, because "modern" rigs don't require much (if any) tuneup. Different ball game.

Dig up an old ham mag or catalog and compare the prices of yesterday's ham gear with today's - then adjust for inflation.

>For sure the level of learning needed to actually pass the old
>First Phone tests, and there were several different tests administered, was not
>trivial nor "entry level". Just as the Extra class exams were not.

Sure. But there's no way to objectively know for sure because we don't have the old tests for comparison. And recall that the test methods have changed as well.

One thing's certain: We're not going back to the old test methods any time soon, so we have to make the best with what we have.

The big question is this: What should the written test requirements for a full-privileges amateur license be? On the one hand you have folks who want the absolute least testing possible, and on the other are folks who want something much more. All FCC really cares about is that we keep our signals clean and behave reasonably.

>> >Then we have geniuses like Slim Burke to offer up as genuine, current

>I did not see it in the academic programs section. I cannot find credit for
>amateur radio license. You still did not prove the colleges you mentioned
>gives
>college credit for an amateur radio license. Please post a webpage link or
>something.

Vippy, you NEED TO PAY ATTENTION!

I have CLEARLY stated on SEVERAL occcassions that this was done when I was
in California, my stay of which ended in 1992.

I have CLEARLY stated that I did not know if they still recognized the
Amateur license for such credit.

Lennie said no one ever did this. I provided him references to reputable
public educational facilities that did. I also CLEARLY stated in past posts
that I did not know if they still used the practice.

>Lenover21 said:

>>>A couple months later at a local luncheon, I brought up that
>>> subject to two instructors at local colleges (Pierce and CSUN),
>>> one a licensed amateur, the other having been one. When the
>>> laughter subsided they said simply "no credit is given in
>>> California colleges and universities for amateur radio activity."

>> NEITHER of which were the colleges mentioned... ! ! !
>
>It does not matter if it is not the colleges mentioned. Colleges transfer
>credits from ACCREDITED courses.

And at ONE TIME accepted as ELECTIVE CREDIT certain professional and other
federal licenses that demonstrated the applicant had expended SOME amount of
external learning.

>(Just read the college admission policy and
>you will see this statement).For example, I can transfer credits from a
>circuit
>analysis course, but not this "amateur radio license course credit".

Who said anything about TRANSFER of CREDIT, Vippy?

>Since those other colleges do not recognize the amateur radio license as an
>accredited course, an amateur radio license is not equivalent to college
>credit.

Go back and re-read what has been said here, Vippy, and in my previous
posts. But before you do, you might want to take a towel and wipe that
excrement from your eyes from having had your head so far up
your...uhhhh...well, you know where.

>> Now you look absolutely INFANTILE!
>
>Seems to describe yourself. Were you looking in a mirror when you wrote this?

Nope, Just Lennie's shameful attempt to excuse himself from yet another
newsgroup faux pas, and now your obviously errant "comment" on it.

>How about college credit for an amateur radio license? How does that look?

Pretty good. I am sorry I didn't finish up at SBCC, then I'd have a
transcript documenting the elective credit.

Now...aren't you getting tired of making a fool of yourself, Vipul...?!?!

>satisfied with the present crop of Extras?

Whoa there! You're presuming the conclusion again!

"more material at a complexity far greater than the exam you took at age 16"? Do you have the old 1970 exams for comparison? I don't think so.

The 1970 exams covered some of the same material as today's exams and some DIFFERENT material. More important, in those days we did not have the exact Q&A to study from, nor any clear idea what the test questions would be like other than that they would be multiple choice.

Shall I repost some of the study guide questions from the old License Manual? They were in essay format, even though the exams were multiple choice.

>> > But please reflect on what some of the PCTA Extras have stated

the same now.
>
>> None of this is meant to mean or imply anything negative about new
>> hams or old ones. But the written tests can and should be made better.
>> Many of us suggested ways of accomplishing this to the FCC as part of
>> the 2000 restructuring.
>
>You're the guy that wanted more license classes.

Where?

In discussions here with gentlemen like Jim Rosenthal, WA4STJ and Dick Plourde, several ideas of alternative license structures were developed. I still like the "Chinese menu" idea.

But the NPRM clearly showed that FCC wanted less complexity, not more, so I supported four license classes (same as FCC proposed) and some other changes. Like better test methods. Am I not entitled to my opinion?

>I'm the guy that asked for enforcement no matter which way it went.

Lots of us asked for enforcement. Enforcement is a good thing. But it won't make hams any more technically knowledgeable.

Brian:

The only reason why "the government" got involved in reducing and/or
eliminating the code testing response to the lazy whiners nagging them
to do so. If there had not been a controversy over code testing, then
that requirement would likely never have been considered for reduction
or elimination. Action causes reaction.

I don't "come down hard" on newer ops, Jackie. I just "come down hard"
on participants in this NEWSGROUP who propone that they are "equal"
as General- or Extra-class hams having been licensed/upgraded under the
present, significantly reduced licensing standards. The truth is that they
are definitely NOT equal to their fellow hams who were licensed/upgraded
in the Pre-Restructuring Era.

>From what I've seen
>here, though, you aren't a very nice person. That's the ONLY criteria on
>which I could judge you by, since I don't know you personally. But your
>written words are speaking volumes to me.

Jackie, it is impossible for you to know me based on what I write here.
This is a Usenet newsgroup, and newsgroups are well-known to NOT
accurately reflect Real Life. I do take ownership for everything I say in
here, but my words don't necessarily reflect my personal, one-on-one

relationships with real people in the real world. Having said that, I will admit that I am not given to "suffering fools gladly" in real life, and have been quite consistent in my behaviour toward people who place political correctness above reasonable, rational thought and action.

>I never said you're a
>misanthropic, misogynistic ogre; you are putting words in my posts that
>aren't there. I just think that here, you act like a jerk, and an arrogant
>one at that. I don't think I'm wrong.

Well, thank you very much. Contrary to your own standard, you have just judged me quite harshly indeed without really knowing me!

>Maybe you're a helluva nice guy on the
>air and in RL, but seeing how you act on this newsgroup makes me hesitate to
>want to know you in RL or have a QSO with you on the air. I don't suffer
>arrogant people too well.

Apparently there's quite a bit of slop in your definition of "arrogance." You obviously don't think it is "arrogant" for newcomer hams to demand to be treated as "equals" when they have achieved Extra-Lite status.

>> > However, quite the opposite is true. I only want what is best for my
>> > fellow man, and particularly my fellow amateur radio operators. I dare
>> > say I am a bit more qualified to know what that is than they ever could.
>
>I never asked for AR to be some touchy-feeley kumbaya thing, anyway. Why you
>feel that you need to act like an arrogant know-it-all here is really still
>puzzling me.

Well, Jackie, if you had been participating in this newsgroup and it's antecedent
Fidonet forums for, oh, say, about the last 12 years or so, you'd most likely be
a lot less puzzled! You see, in this newsgroup, I *AM* an arrogant know-it-all,
and so is everyone else! The problem is, they won't admit it; I just did!

>You're not winning friends and influencing people. Maybe that's
>just the way you want it. Suit yourself.

All of my friends, and those I have influenced, would tend to disagree with you!

From K4YZ:
> I have CLEARLY stated on SEVERAL occcassions that this was done when I
>was
>in California, my stay of which ended in 1992.

At first you did not state this, and after responding to my post you stated
this.

> I have CLEARLY stated that I did not know if they still recognized the
>Amateur license for such credit.

Most likely no accredited college today accepts an amateur radio license for
college credit.

>And at ONE TIME accepted as ELECTIVE CREDIT certain professional and other
>federal licenses that demonstrated the applicant had expended SOME amount of
>external learning.

The colleges you mentioned (from 1991) were less rigorous <,community>
colleges. One can pass the test within a week. No college should give credit
for the amateur radio license.

> Who said anything about TRANSFER of CREDIT, Vippy?

First, Len said no California college accepts amateur radio license for credit.
Then, you mentioned that the colleges he mentioned were not the ones you
mentioned.
Then, I said since those other colleges won't TRANSFER the credits, the
amateur radio license could not be used to obtain college credit.

Its important to note that if a college won't transfer that course for credits,
they do not recognize the course as valid course credit. The admissions policy
says nothing about elective credits. These usually ARE transferrable for
credit. (I may have to re-read the policy. I am not really sure about whether
elective credits are transferrable). Therefore, an amateur radio license does
not qualify as college credit. Now, do you understand?

> Go back and re-read what has been said here, Vippy, and in my previous
>posts. But before you do, you might want to take a towel and wipe that
>excrement from your eyes from having had your head so far up
>your...uhhhh...well, you know where.

It should be possible to respond without this type of comment.

>>How about college credit for an amateur radio license? How does that look?
>
> Pretty good. I am sorry I didn't finish up at SBCC, then I'd have a
>transcript documenting the elective credit.

Just because they did it does not make it right. Even that they recognized the amateur radio license for credit is in doubt.

> Now...aren't you getting tired of making a fool of yourself,
>Vipul...?!?!

You were the one who said an amateur radio license could qualify for college credit.

Len:

I plan to repeat it every time you resort to doing the things that the quote says you do. When you do those things, you yourself are not arguing anything about amateur radio. I don't wonder that N2EY chooses not to tell you where he works. You appear pretty interested in finding out. We've already seen what happens when you find out something about another's job or former job or his military or government service.

If it pleases you to pretend to be an injured party in this, I really don't mind. You can go on writing something about the "big lie" but your own words betray you.

You are to amateur radio what a bullfrog is to a game of Nine Ball.

No, I don't think that natives of the former Burma would put up with
having to call themselves "natives of the former Yugoslavia/Jugoslavia
but you really should take it up with Len. He's worried that some guy
can't consider himself Yugoslavian because there is no more Yugoslavia.

My mother-in-law was born in a Finnish town which is now part of
Russia. I guess she should start telling people that she's Russian.

Quite a number of colleges and universities extend academic credit for
life experiences.

One U.S. Department of State course I took in radio, used the complete
Heath General Class amateur license course as part of the study
material. That State Department course is accepted for college credit.

So you still lay claim to NOT being a liar? LIAR!!!

The challenge is crystal clear- Google up the post where I ever said anything like that.
It's the TESTS that aren't worth the effort.

Dick, while its important to make instant counter-accusations, you
have left this one alone.

You were complaining about the -people- who took the exams more than
once, i.e., multiple times.

Why?

Did they take the exam more than once because it was easy?

...because it was difficult?

...because the exams weren't worth the effort?

Good luck.

Floyd, Extra Dick, actually, I'm the one who said "new." I should
have said "new to the group." Sorry for the confusion.

Clearly though, from his other posts, poor Dick thought I was
new at amateur radio. He got trolled by an old pro. When he
couldn't counter the logic, he resorted to "you're a newbie".

Shame on Dick. Even Larry had the smarts to stay clear... :-)

I found something similar. I was stronger on practice than pure theory. EE school fixed that.

A story from EE school:

In electronic circuits class, we had Prof. K, who closely resembled Wally Cox. Excellent teacher, really knowledgeable and practical.

In those days the circuit modeling by computer simulation was a hot subject, and we had access to SPICE and other modeling methods. Yet we were still required to learn all the classic circuit analysis methods. Some students (not me!) thought this was dumb - why learn to do the analysis by hand when a machine could do it faster, better and easier?

He also had us analyze all kinds of seemingly-odd circuits, many of which I recognized but which were a mystery to others. Some students (again, not me!) grumbled that we were learning stuff we'd never use. Prof. K explained that what we needed to learn was the methods of circuit analysis to the point where we could analyze anything, not just the common or obvious circuits.

One day Prof. K draws a resistance-coupled JFET amplifier on the board, asks what it will do. Everybody says "amplify the input signal". "Correct", says Prof. K.

Then he redraws it to use tuned LC input and output circuits, both tuned to "about the same frequency". Again he asks what it will do. Everybody but me says "amplify the input signal if it is near the tuned circuit frequency". I say "it may amplify, but it will probably oscillate". Rest of class thinks I'm nuts. Prof. K looks at me, smiles, says "You're a ham radio operator, aren't you?" "Ummm...yes"

He went on to explain to the class that if the tuned circuit values were correct and the internal capacitances of the FET were adequate, the circuit would indeed oscillate. 'You have to use the right model" he said "the simplified model that ignored Cgd is not adequate for this analysis".

Nobody ever forgot his practical examples.

Then there was the time I 'taught' a 400 level lab session in rotating machines while in second year (none of those guys had ever seen or heard of a "two-bulb synchronizer"). And Prof. W's power class and the incredible transmission line....

You would have been happier had you failed?

Did you think the General and Advanced exams, which you took at age
14, were lacking also?

Then at age 16 you began scheming to change amateur radio because you
knew more than the engineers creating the question pools?

Too much James Dean? Rebel with a cause?

> >having just freshly passed the

> all that tough. Not if I could pass them! ;-)

Well, I don't know about that. Engineering and building radios that
put out clean signals at age 16? Questioning the FCC about how lax
the Extra exam was?

I think you're being modest.

> Whoa there! You're presuming the conclusion again!

Which? Greater/more complex? Dissatisfaction with new Extras?

> "more material at a complexity far greater than the exam you took at age 16"?
> Do you have the old 1970 exams for comparison? I don't think so.

I know that there are electronic devices, signal processing, and modes
available today than there were when your QP was developed. Though
there were RF hazards back then, today they are being tested on
environmental assessments.

> The 1970 exams covered some of the same material as today's exams and some
> DIFFERENT material. More important, in those days we did not have the exact Q&A
> to study from,

Granted. Have you tried chaning that?

nor any clear idea what the test questions would be like other
> than that they would be multiple choice.

No clear idea? Cecil says otherwise. The ARRL, AMECO, and Bash were
publishing something in 1968-1970 time frame. I wonder what it could
have been.

Did you have either publication?

> Shall I repost some of the study guide questions from the old License Manual?
> They were in essay format, even though the exams were multiple choice.

Study guides? You used study guides?

> >> > But please reflect on what some of the PCTA Extras have stated

>
> I'm not him.

Remember, you asked. And he is an Extra, he does post here, and he
has had a career in electronics.

> Have YOU ever volunteered your time and effort as a VE?

FCC regulations prohibited Technicians from the VE system. I did
teach, with several other volunteers, two Technician classes.

> >Extra Bruce, using himself as an example, says anyone can pass Extra
> >because the exam is worthless.
>
> So?

Remember, you asked.

> Is he not entitled to an opinion, however strange?

However strange. But he is an Extra, he does post here, and his
career is electronics, though I don't know how handsomely he could be
paid at that literacy level.

He did pass the test,
> according to the database. I'm not him, btw.

Easy to tell - you're literate.

> >Extra Larry refuses to accept post restructuring Extras as anything
> >except floatsam.
>
> It's "flotsam".

Yes it is. And congrats on not tripping over my mispelled word and
not getting up.

> Is he not entitled to his opinion? I'm not him, btw.

Remember, you asked. And Larry is an Extra, posts here, but is not an
electronics careerist.

> >Now Extra Jim says the current exams could be made "better."
>
> Been saying it for years.

Ever since 1970, no doubt.

> So has Extra Carl. I note that you don't take him to
> task for his opinions.

I've said it too. Why should I take him to task?

> >> > As far as the code exam goes, does

>
> Study the rules. OO qualification goes beyond what's on the tests.

True.

> >And they'll wonder why Joe 2x2 can't play in the same playground.
>
> Only if they're Extras.

Only if one is an Extra, and the other is an Advanced. But that was
the context.

> >> I also say that the code tests are not an outdated requirement. YMMV.
> >
> >Vastly.

>
> Well, there you have it.

Yes, there you have it. But we were talking WRITTEN exams. Unless
copying code is considered a written exam.

> >> > Nope.

Have we been secretly meeting somewhere else?

> In discussions here with gentlemen like Jim Rosenthal, WA4STJ and Dick Plourde,
> several ideas of alternative license structures were developed. I still like
> the "Chinese menu" idea.

Yes, yes. You liked more license clases, not fewer.

> But the NPRM clearly showed that FCC wanted less complexity, not more, so I
> supported four license classes (same as FCC proposed) and some other changes.
> Like better test methods. Am I not entitled to my opinion?

But you have a history of being dissatisfied with how the FCC does
things, ever since at least age 16/1970, and perhaps as early as age
14/1968. So in 1999 you supported the FCC's plan?

And I thought the FCC plan went to three license classes, not four.
The ARRL had a four class structure, as I recall.

I hope you're not another one of those Extras that confuses the ARRL
and FCC.

> >I'm the guy that asked for enforcement no matter which way it went.
>
> Lots of us asked for enforcement. Enforcement is a good thing. But it won't
> make hams any more technically knowledgeable.

Not even if they want to stay out of trouble? There's a Q over on
rra.antenna about the bandwidth of a SSB signal, and if it is an out
of band or spurious emission. That is covered by the exam, though.

Jim, I think you're in a better position to doubt the efficacy of the
FCC exam today than you were at age 16. You're an engineer though,
and prone to transfer a level or depth of professional knowledge,
which took a lifetime of learning and application to achieve no matter
what a hotshot you were at 16, to a -hobby- undertaking.

Thanks for listening.

>
> Why would they do that?

That was my point. I wrote of immigrants calling themselves natives of
the former Yugoslavia/Jugoslavia. You responded with "like the natives
of the former Burma?". I don't think anyone born in Burma calls himself
Yugoslavian.

> I would imagine that they would refer to
> themselves by whatever new name they came up with.

I don't think those who already left would do that. Our Deputy Chief of
Mission in Botswana was married to a fellow from what is now Croatia.
He told people he met that he was Yugoslavian. He didn't leave a
country called Croatia. He left a country called Yugoslavia.

> Otherwise, why
> rename their country?

I don't know, Brian--perhaps out of sheer boredom. Maybe they just
wanted something more difficult for foreigners to pronounce.

> > but you really should take it up with Len. He's worried that some guy

>
> Depends. Was she still living there when it became Russia?

You might be getting near the point of understanding what has already been written. No, she was not still living there. She is a Finn.

Larry didn't receive left-handed compliment. Larry has done fine,
especially when his low power and less than ideal antennas are
considered. Larry wasn't called a Novice. Brian is just reading between
the lines again. Do you consider Len's comment to Larry about his WAS a
compliment to Larry?

Len Anderson isn't even in the game. He's a never-WAS.

> > words per minute in very short order.
>
> Lets define "just about," please. Would that be 100%, 97%, 95%, what?

Something slightly under 100% would be my idea of "just about anyone".
For a definition of "just about", you'll have to do a littlel work on
your own.

> > > Do you suppose that there might be a person out there who has no

"Auxiliary" is correct. It isn't the British spelling, however.

ok, here is the proper way to report apparently illegal radio sales straight
from the horses mouth:

FCC CONSUMER ALERT

Federal Communications Commission

Consumer and Governmental Affairs Bureau

445 12th Street, SW Washington, DC 20554

1-888-CALL-FCC (voice)

1-888-835-5322 (TTY)

www.fcc.gov/cgb

UNAUTHORIZED EQUIPMENT SOLD ON INTERNET AND IN PUBLICATIONS

The Federal Communications Commission receives hundreds of complaints about
alleged illegal (non-FCC certified) equipment being offered for sale on the
Internet or in publications. The Commission is monitoring this situation
carefully and requests your assistance. If you have any information about
illegal or uncertified equipment being offered for sale, please forward it
to the FCC. Useful information for the FCC includes:

* An original advertisement or Web address where the illegal equipment is

being advertised or offered for sale with the types of equipment about which

the allegations are being made, highlighted.

* If it is a Web-auction we will need the name of the auction site, the
exact

item number, and auction opening and closing dates.

* Name and address of the individual or business offering the item(s) for
sale.

* Complainant's name and telephone number in the event follow-up is
necessary.

This information can remain confidential, if requested.

* Specifically, why you think the equipment is not in compliance with FCC
rules.

* Number of pieces or types of equipment about which the allegations are being

made (one piece, five pieces, how many models, etc.).

Information can be mailed to the FCC at the address below or e-mailed to fccinfo@fcc.gov.

###

I used to predict that, too, and got paid to do it. But my clients
usually also wanted civil and nautical sunrise times, cloud cover,
visibility, etc.

Moon prediction was a little tougher, especially when my client is
flying NVG at an extremely low altitude.

Despite your extensive experiences (both of you) in that field,
trust me folks, the sun does *not* necessarily come up tomorrow!

Nor does it necessarily go down today.

Reminds me of something a school teacher showed me years ago
when my children were in grade school. It was an "IQ test", and
one of the questions was, "From which directions does the sun
come up in the morning?" The answers available were: North,
East, South, and West.

The teacher sighed, and said she just marked that one correct no
matter what the answer was. Her point was that the test was not
necessarily valid for her students.

True. We get the coriolis force from the same phenomenon.

And the stars don't go away during the day.

Because they're in Myanmar, the country formerly known as Burma, not
FY.

> Your response suggested that they might.

Hmmm? No it didn't.

Chalk it up as
> another of those things like your having told somebody that you'd be
> building 1N34A's when that is perhaps not what you wanted to convey.

Dave, I think you've tripped over another misspelled word and cannot get up. Probably bumped your head as well. Since you're already prostrated, go ahead and take a rest.

I had an immediate change of heart, which you noticed and made note
of, then chided me for not hooking up with Kim and Alec.

Now you tell us I left.

Which is it?

You're sounding more unreliable with each post. Did you bump your

Ahh. Thanks for clearing that up for me. You meant to say "short
period of time."

> > Would you mind completing a sentence?

He did if he read your post.

Larry has done fine,
> especially when his low power and less than ideal antennas are
> considered. Larry wasn't called a Novice.

Larry is a novice Award seeker. Is being a novice an insult?

Brian is just reading between
> the lines again. Do you consider Len's comment to Larry about his WAS a
> compliment to Larry?

You're kidding, right? When did those two ever have anything nice to
say about each other?

> Len Anderson isn't even in the game. He's a never-WAS.

Perhaps. But not everyone seeks awards whether they're "in the game"
or not.

It is typically Brian Burke to blame others for your inability to read
or write English.

Better prostrated than prostated...

Dave K8MN

As anyone reading here can plainly see, I interpreted your remarks
correctly as written. You made it clear that you were licensed but never
had gotten around to putting a rig on the air. Now you attempt to
throw in
additional facts, which were foreclosed by implication if not direct
statement. So we can conclude that you are nothing more than just
another internet troll at work.

>
> .... And make no mistake, that's what this NG is all about-

>

> I have neither said "none" as a ham, nor have I claimed to be
> any "original" authority.

Again, your statement clearly stated that you had held a license for
"awhile" but you had never "got around" to getting a rig on the air. And
then you find it desirable to change your statement. Truly the mark a
deliberate troll.

> But certainly I can claim to have the

And I indicated that I do? Nothing doing, Floyd, if you think you can
Google
up that one feel free to do so. You can't.

> I'm not impressed with whatever your
> technical background is that you think gives you something
> special compared to newer less experienced hams.

I couldn't care less what impresses you. Your alleged work background
isn't so extraordinary, either.

> If either of
> us are special, that isn't the reason why.

It's not that anyone is so special, it's that all the "avoiders" are so
un-special.

> administer it! Draw a few comparisons to other services,
> including CB.
>

You are cordially invited to take a (evidently first) look at what the
FCC clearly states about the ARS- that FCC considers -still- the ARS
to be a "Fundamentally technical service". Unquote. They said
it once again at the last Restructuring.

>
> And while you are researching that, look up "avocation" in a
> dictionary. It means... "hobby". And it is, to be sure!
>

So most hams view it as an avocation rather than a vocation. I always
have. But if you believe that it's "just a hobby" and thus its
practitioners need nothing in the way of technical training beyond
how to read a frequency dial, shame on you. shows what you (don't) know.

>
> >> Those tests are *all* meaningless to anyone

>
> Yes they *do* agree with it.

If the FCC agrees that all the tests they administer are meaningless,
why do they continue to devote resources to that end? Methinks you need
a good dose of the rational. Might be hard to find on Point Barrow. You
can still try. Surely there's some around there somewhere.

> We might also note what happened
> to the 1st Phone license too!

The First Phone was killed by the broadcasters who wanted to save money
by hiring the cheapest help possible. The fact that one
had to hold that license to sign paperwork and do numerous other mundane
things helped
kill it. Had the license been required for only the work which actually
required technical learning and skill,-as sit initially was- it would
still be around. Is it "needed"? Is a ham radio license needed?
Is Morse code training and skill still needed? Matters of opinion,
obviously.
If you had worked around some of the BC stations post-1st phone and seen
some of the stuff that goes on you might have another opinion. The real
techs are now consultants and work a number of stations. The flunky kids
are still flunky kids, only now sans the phoney licenses they were never
qualified for in the first place.

> And yet, since I worked for
> many years on government owned radio systems where a commercial
> license was not needed I worked many very fine technicians who
> were simply not good at taking tests and never did get a
> commercial ticket.
>

Well as a matter of fact, so did I. When I signed on, the license (1st)
was
still a requirement and for the next 20 years, both by the FCC and the

employer. The employer still requires it (GROL)though the FCC does not.
Clearly there is still some value accorded to technical training there.

>

> measure of a good ham.

You've fallen into the trap set here long ago by the no-coders who
have
always attempted to portray any oldtimer who supports any code test in
ham radio licensing as being automatically dead set against all
newcomers.
Nothing could be further from the truth. Shame on you.
Larry's incendiary remarks aside, which he has long said are
designed merely to stir the pot, no one here that I know has any such
viewpoint. Truth is, he has some valid if extreme points.

>
>
> >Why should you presume that you're the only one here who has

None of which has any relevence to the instant situation, whatever
the facts.

> I am also not
> at all alone in what I have been saying, and I think you must
> have noticed that most responses to what I've posted have
> supported my comments.

Ah, yes. All the whining,code hating,Extra bashers cheer and suddenly
you have "support". Right. Your critics remain silent and suddenly
that's "evidence" that you've got it all together. Fraid not.

>
> >> Someone mentioned getting an Extra

>
> I read it right the first time.

Actually you evidently didn't. Jim said he was 16 when he got his
Extra. He lived a short distance from the FCC examiner. I lived 260
miles away. It was I who mentioned that
the FCC engineer-examiner had commented to me that most people regarded
the Extra exam as tougher than the First Phone- and I wasn't 16.
And having taken the First Phone test not long after completing
electronics school-several years before taking the Extra- I personally
didn't see it that way.
I took the First Phone exam in New York City and
while that surely didn't make much if any difference, I found the First
Phone tough enough that I still remember a couple questions
that I had difficulty with while I don't recall any such difficulty
with the Extra. In fact I didn't miss a single question as evidenced
by the fact that the examiner didn't put pencil to paper a single time
while grading the test.

> > were highly prized.

Sure, even though they had no idea what they were attaching their
signature to, nor any technical skills beyond memorizing in a
crash school. FCC should have prosecuted each and every crash school
operator and retested every graduate, which clearly would have
eliminated most. In your view failure of bureaucracy validates whatever
follows.

We see where you're coming from, and it ain't pretty.
Another troll checking in with more Mister Twister views. Ugh.

Dummies like me were considered excess

> baggage, forced on them by the bureaucracy, because between
> hourly initials in the log, what good was I! That's why they
> paid us peanuts too, and it's why I never saw that as part of my
> future. (An attitude that really annoyed some of the people I
> worked for while I was going to school, but...)

I was a contract engineer. Beyond checking the transmitter and antenna
for proper operation periodically and confirming all was well by signing
to that effect in the statikon's log, they called me when something
broke. I was on retainer for the routine stuff and billed them
extra for repair time.

>
> >Makes one wonder if you weren't one of them instead of one of

> learn how.
>

Sure came down to that, didn't it? Such is evolution over time when the
system is allowed to slide into that sort of degradation. Early stifling
of purveyors of illicit licensing along with reasonable standards
demanding
the presense of transmitter engineers would have avoided that whole
ugly scene. FCC wasn't up to the task, for whatever reasons.
Now we see exactly the same sort of thing occurring in ham radio.

>
> And that is exactly what a couple of us have been trying to

> example.

You have no idea what sort of example Larry sets. What he does here is
mostly to stir up the uninitiated and the thin skinned thickheaded.
Yep, there are some of them here. I was quite surprised to find that
too,
when I first dropped in on rrap some 7 years ago.

> We can also find many others who will never be able to

You just don't get it, and probably never will.

FCC: "Ham radio is fundamentally a technical service". You don't believe
that FCC means what it says?

>
> Wow. But, I just don't think so.

> for the ticket as you or I.

You DON'T get it, clearly. To you anyone who comes out with the paper
is fully qualified, even though they know nothing about the material on
which they were tested, and were/are unable to properly function as
licensees.
Welcome to ham radio in the new millenia. It's a lot like that here
too,
these days.

>
>

>

Man, you're dense! People scam the testing and licensing system so
thoroughly that the proof of technical qualification becomes
meaningless, and to you that means there was never a need for a
technical qualification! Amazing!

>
> > And then maybe that same situation applies to ham radio? So

It was 1968. Maybe you're not very familiar with ham radio.

> But I never saw much purpose in either
> the Advanced or the Extra Class, and even though CW was always

>

I can just imagine. You're so involved that though you claim licensing
for (now you say) 43 years but with little to no activity, evidently
none

whatever that can be used to claim current knowledge of conditions in ham radio, why should you care about much of anything related to ham radio? Again, you're an FCC licensee, not a ham radio operator!

>
> Hence if they had a single license, and it covered rules and regs
> and had a minimal amount of radio theory and a 5 wpm code

Hang on, that's where we're headed. And you can look for lots of us to lose interest in DC to daylight CB.

FCC might as well understand that their present enforcement problems are nothing beside what's coming!

>
>
> But... I don't mind either if there are 8 classes, as long as we

> experience just because a relative few of us actually do have
> it.

So since they can't possibly learn anything of commercial significance, no ham should be required to bother with such a thing as technical learning. We see. But don't expect to find much agreement except from the set here who never would anyway. And so far, thank our lucky stars, the FCC doesn't agree.

I tire of ya, Floyd - already. Your thought process, such as it is, is mired in the muck, never to be rescued in this lifetime.
Into the bit bucket with you, right along with
Lennie-AVeryFineSpeciMan,
Slim-Twit Burke, Vshah, and THE BOOB, also known as W5TIT.

It ain't crowded but I'm sure you'll enjoy the company.

Oh, one more thing. Get yourself some gear together and learn to use it - yes, whatever your background, you'll have to learn to use modern ham radio gear, it's unlike anything commercial that's out there, and fer sure unlike the earlier ham radio equipment. If you're really that learned it won't be hard to do, so not to worry.
Then -learn how to build and hang some antennas, get on the air and actually become a ham radio operator. You might learn something about ham radio, and for sure you will expose yourself to some fun. There's all
sorts of new (and old) fun stuff out there these days.

Kode-hating Karl, we know were you're coming from and you are NOT worth even
an argument. Stuff it. You'll never know what the test I took was like, you
weren't
qualified to even take it. While You sat licking your bruised ego for half your
adult life
others of us were just doing it and getting on with life. If I thought you ever
could, I'd
advise you to get over it, but that's not gonna ever happen.

No, I meant to write "I don't believe there will be any morse test at all within a short period." In future, you may assume that I mean "time" and not "dits", "dahs" or "snow flurries".

There's no "perhaps" to it.

> But not everyone seeks awards whether they're "in the game"
> or not.

Wrong. Not everyone who is in the game seeks (amateur radio) awards. Those who are not in the game cannot seek (amateur radio) awards. Len can play a game of Visit All States or e-mail all states or telephone all states.

In the mean time, Shhhhhh! Len's very hard at work. He's trying to think of a way out of the N2EY profile conundrum.

>It should be possible to respond without this type of comment.

No, Vippy, in this case it's not.

You seem to have a problem with blundering into on-going discussions
without any evidence of having taken the time to acquaint yourself with what's
going on. You are poorly prepared and shotgun answers that are at best
humorous, at worst humiliating.

Please don't waste our time.

>> Pretty good. I am sorry I didn't finish up at SBCC, then I'd have a
>>transcript documenting the elective credit.
>
>Just because they did it does not make it right.

At the time, it was right. Amateur Radio licenses still had the trust and confidence of boards-of-education becasue there was still an assumption that the test demonstrated that the licensee learned something in order to BE licensed.

>> Now...aren't you getting tired of making a fool of yourself,
>>Vipul...?!?!
>
>You were the one who said an amateur radio license could qualify for college
>credit.

That didn't answer the question, Vippy. I asked you if you weren't tired of making a fool out of yourself.

Had you taken the time to follow what was going on and the context in which it was presented, you wouldn't have wandered into yet another quagmire of foolishness.

Please try to follow along next time, OK?

Steve

> If the FCC agrees that all the tests they administer are meaningless,

You just can't stop with changing what I say and arguing against
something I've never even implied much less said. Nobody said
the tests are meaningless. I said to a professional they are
meaningless (essentially they are trivially easy for someone who
uses the very same information daily).

I was going to respond to some of the other comments, but by the
time I got half way through it you'd stopped even trying to make
sense and had gone back to manufacturing insults. Clearly you
don't have many valid points to bring up, and have to make do
with insults and fabrications.

I don't think anyone is interested in reading that kind of exchange,
and I can't see wasting my time either.

>How does "technical service" exclude it being a hobby? Stop
>being absurd. It *is* a hobby. It has always been a hobby.
>And that is why they call it the "Amateur" Radio Service.

It's called "Amateur" because we are prohibited from receiving money for what we do. That many persons do what they do in the "Aamteur" radio service in a professional manner is a matter of record.

For many it's a hobby. For many others it's a tool...a means to an end. That many use it as a hobby is fact. That it is MORE than a hobby is also a fact.

>I said "It's a hobby folks". I did *not* say that it can't be
>other things too, so claiming I've said "just a hobby" when I
>have not is deliberate fabrication on your part. You even put
>it in quotes. Shame on you.

No "shame on you" required. If you say "It's a hobby, folks", without any other qualifiers, that's ALL you said. That's where the confusion enters.

>It *is* a hobby, and you might as well a get used to it. Get used
>to the new FCC license structure too, it isn't going away soon.

You're right.. And it's probably going to get MORE socialistic in it's structure before it's all over.

>>practitioners need nothing in the way of technical training beyond
>>how to read a frequency dial, shame on you. shows what you (don't) know.
>
>Nobody has said that. Shame on you for more fabrication

The sad truth is that's it's all too true. No one's really required to KNOW the material necessary to become licensed, let alone upgrade to Amateur Extra. Yes, many DO "know" the material. Most don't.

Thanks Dick Bash.

>Clearly you
>don't have many valid points to bring up, and have to make do
>with insults and fabrications.

He may have been to-the-point and brusque, but there IS a point to be made.

>I don't think anyone is interested in reading that kind of exchange,
>and I can't see wasting my time either.

Despite the excellent opportunity this forum presents to actually discuss any "policy" issues, Floyd, any attemtpt to deviate from the "code test" issue is promptly pulled back to it by a few narrow minded individuals who don't have the mental capacity to discuss anything BUT the code test issue. Mostly by those who, regardless of the subject, will reintroduce the "code issue" with something like.."Oh yeah, and NOW you'll tell us how CW get's through when all else fails...", even if mode selection wasn't the topic.

There are a great number of policy matters that need to be "front burnered" for the good of the Amateur Radio Service, but if you want to have any impact on those issues, it will have to be done elsewhere.

My pet project is "Spectrum Protection". I don't think anything else is as important as any other discussion in Amateur Radio right now since if we have no allocations, we're dead.

Try and discuss it here!

All I can say is "Good Luck"..!

I agree that it is settled. You told us one thing and did another.
That's one reason I'm not apt to trust you. Consider yourself chided
once again.

Cecil - Would never go for the Extra
Len - Going for the Extra "right out of the box"
Alec Baldwin - Leaving America if George Bush is elected
Kim - Leaving r.r.a.p.
Brian - Leaving r.r.a.p. but says he never left
Richard Nixon - You won't have Dick Nixon to kick around any more (he
finally made good on that one)

Some folks get all worked up over the word "hobby". I think it's because the word conjures up an image of triviality, low or non-existent standards of knoweldge or skill, not contributing anything really meaningful to society, and/or being purely for the fun of those involved.

So, Floyd, how about defining what "hobby" means in the Amateur Radio context?

Leonard has himself a dilemma, Jim. He can't make "the big lie" stick
while using his typical comments. He doesn't seem to be able to avoid
your profile.
Character cannot be assassinated if the statements made about character
have been demonstrated to be factual.

Meanwhile, Jug Southgate, I could have sworn I saw the ghost of the
frosh out by the north tower last night during the high winds.

The big BC-348Q and National RCP restoration projects are coming along
nicely.
I have the '348 operational and only have to do a touch up alignment. I
haven't powered up the RCP yet since the cap replacement isn't all done.

Why would anyone conjure up that notion? Amateur astronomers
have discovered a lot of interesting things, so have amateur
geologists, amateur botonists, and we could list several other
very technical fields where amateur activities are not
necessarily trivial.

Of course *some* of what they do is indeed trivial. Maybe even
a majority of what they do... but after all, heh heh, we're
discussing hobbies.

>So, Floyd, how about defining what "hobby" means in the Amateur Radio
>context?

Is that any different that what "hobby" means in any other
context? It's an avocation, or what a person likes to do when
they aren't engaged in their vocation.

To see if you would trip and fall down?

It is a common enough abbreviation in war planning circles. I screwed up and thought amateurs radio operators were adept at abbreviations considering the CW handicap.

If you need any parts, you need but ask...

The Type 7 has been burning holes in the 40 meter ether the past few evenings.
Nice QRQ ragchews around 7020.

Time to hit the hay. 4:30 AM comes way too fast. If it doesn't snow too much,
running conditions will be good in the morning.

Right-o. We mustn't confuse legitimate (yet very slooooooooow)
communications and proficiency in use of a mode.

The only fantasies I've seen here were Han's story of Little Billy Beeper, Larry's broken leg on the mountain, and Dick's New Madrid disaster. But he can't work CW away from the power mains, so he's not able to save the day.

Are you by chance attempting to ask a question (in which you attempt to
put words in my mouth) and then supplying your own answer?

I never did any of the things I've outlined above. I've certainly
never:

1. announced here that I'd be doing something that I changed my mind
and decided not to do.

2. announced here that I'd never do something then reversed myself.

Nice try, Kim.

I can recognize a left-handed compliment when I see one, even if I
didn't receive it.

I'm sure you have your hands full with those which you have received.
Please allow Larry to decide for himself if he has received one.

Len's, as I'm sure you noticed, was not left-handed.

Abbreviations abound because of the tediousness of spelling out words.
Either that or CW ops don't spell very well and hide it through
abbreviations.

As I posted before, ask your CPA to explain it to you. CPA is not intended to mean "Cleaning, Pressing, and Alterations" (an inside joke in the accounting industry).

Dickie's "New Madrid" thing happened well before he was
born with a gold J-38 in his nose and rather before radio
was born. But, he read all about it in a book so he's an
expert and can coach all of us who've ridden out actual
earthquakes.

For official fantasies, I rather like the State Department
Heathkit Course used for training its "key" people. Just
think, foreign policy of the United States of America based
on a defunct kit company in Michigan. :-)

The fictional name during WW2 was "Rosie the Riveter," not
'Rose Riveter.' Even a popular song at the time. You must
have been too young to remember, old-timer. Ham radio was
deactivated for the duration of the war.

How many "Rosie the Riveters" got BSMEs back then, old-timer,
and what does it have to do with amateur radio?

Oh, yes, this is a newsgroup about amateur radio policy, not
headgear. Styles of headgear are very optional, are not in
regulations of Part 97.

I can't see where you PCTAs are SERIOUS enough for a life
of fun and recreation in a hobby. Please consider alternatives.

There's NO "woff fong" on any ARRL page. There IS a
"whouff hong" if that's needed for a symbol. It must have
meant something significant in 1914...it's looked like two
pieces of scrap wood crudely fastened together over the
last half-century. The rettysnitch had lots of sharp points.

Imagine that...grown men revering two pieces of scrap wood
and not being carpenters...in a radio club.

Poor baby. I've been working*, not concerning self with
middle-aged adolescents indulging in their own aroma therapy
(attar of stinky slinging) in wordplay. Pays fairly well, too. :-)

Tell us, munchkin of many keys, was there a State Dept. Heath
Course in Getting Along With People? If there was, you never
took it or flunked out if you did.

You PCTAs are just too SERIOUS for this world...consider
alternatives.

* You don't have a need to know. [NDA] :-)

Good grief, can't have such terrible "trivialities" here!

Everyone MUST be serious-minded!

It's a pejorative thing, very low standard to actually have
FUN or RECREATION in a HOBBY?

Oy gevalt!

>So, Floyd, how about defining what "hobby" means in the Amateur Radio
>context?

How's about another Sermon on the Antenna Mount from the
distinguished cloggyman at the pulpit? Show us all where we
went wrong on considering a hobby as a hobby? Tell all how
to achieve nirvana in the present life by adopting the lifestyle of
amateur radio as a savior?

Be SERIOUS now...

> It's called "Amateur" because we are prohibited from receiving money for
>what we do. That many persons do what they do in the "Aamteur" radio service
>in a professional manner is a matter of record.

"Aamteur?!?" Forgot the Prozac dose again? :-)

Doing amateur work in a professional manner? :-)

Oh, yes, by-the-book, the official book of course, in jargon, expressions, and (by all means) morse code. Relaying all those vital-to-the-nation messages along the NTS. Playing in those "radio sport" contests to qualify as emergency-trained operators. :-)

> For many it's a hobby. For many others it's a tool...a means to an end.

In Sgt Steam Yaputz' case it is a surrogate for life in the corpse, er, Corps. :-)

>That many use it as a hobby is fact. That it is MORE than a hobby is also a
>fact.

Oh, dear, the "fact" fantasy again. Yes, some use amateur radio as a whole lifestyle away from work, imagining all kinds of heroic high-altitude, low-opening derring-do and saving the Titanic over and over again.

>>I said "It's a hobby folks". I did *not* say that it can't be
>>other things too, so claiming I've said "just a hobby" when I
>>have not is deliberate fabrication on your part. You even put
>>it in quotes. Shame on you.
>
> No "shame on you" required. If you say "It's a hobby, folks", without
any
>other qualifiers, that's ALL you said. That's where the confusion enters.

Floyd isn't confused, Sgt Yaputz. You are.

Avocation, hobby, fun, recreation is all it is. Amateur radio
isn't vital to national security, national defense, or anything
else except as a fantasy-land for a minority within. If US
amateur radio were suddenly removed, the USA would continue
to function just fine without it, losing nothing but some loud
complaining from its life-stylers.

>>It *is* a hobby, and you might as well a get used to it. Get used
>>to the new FCC license structure too, it isn't going away soon.

Poor baby. You want to moderate the newsgroup? Contact
Paul. Talk nice and you might get to be a honcho! :-)

> There are a great number of policy matters that need to be "front
>burnered" for the good of the Amateur Radio Service, but if you want to have
>any impact on those issues, it will have to be done elsewhere.

"Front burnered?!?" So far thousands of cubic yard of GAS
have been wasted by the illustrious, noble morsemen of the
PCTA camp. Their pilots are (apparently) lit, but the only fire
they start is used for illuminating their personal magnificences.

> My pet project is "Spectrum Protection". I don't think anything else is
>as important as any other discussion in Amateur Radio right now since if we
>have no allocations, we're dead.

"No allocations?" Oh, my, lots of allocations. US ham radio bands
have increased since 1975, not decreased.

How is Sgt Steam Yaputz fixed for knowledge on US amateur bands
above the 70 cm band? Ever count the number of bands there and
compared them against those below 30 MHz? Know anything about
the microwave region? Remember, you've had 3 decades to learn.

Who is going to "take away the ham bands?" Are you hearing
black helicopters again? FCC has only auctioned off already-
allocated commercial bands for commercial services...no amateur
bands have even been hinted at as being auctioned off except by
the black helicopter fans.

There MAY be some cause for concern. Folks in Yurp got a new
LF ham band in their countries. USA hasn't gotten one yet.
ARRL can't seem to shake the notion that 160 to 190 KHz
isn't "ham territory" (as if it ever was). Oh, my, ARRL got this
pioneering research group to "evaluate" a small piece of 5 MHz
spectrum real estate in the 1990s (as if it were an unknown as
in the 30s) but the R&O hasn't been given yet. FB OM

Got a spectrum analyzer, Sgt Yaputz? Know what it is? If y'all
going to po-lice that spectrum you gots to know what's there.

Have you taken that expert Heathkit Course that Department of
State had for its "key" officers? Better get busy and study up
on things policy, things spectral, and how to play well with
human beings...

> Try and discuss it here!

Not a problem to me but I expect you will have the usual SOP
(Standard Off-color Pejoratives) to issue in snarlygrams. :-)

> All I can say is "Good Luck"..!

Tsk, tsk, tsk, no famous phrases like "fair winds and..." and other
phine phrases? Just "good luck?!?" :-)

3099. Re: Icing problems on Yagi antennas

dhardy@backroads.net (Montysmoke) writes:

>Need help--I have a problem with icing on a yagi. I lose signal
>everytime we have an ice storm--I have seen (somewhere??) something
>about a type of spray on de-icer (aerosol). Any body out there know
>anything about this?

Icing on antennas is usually caused by precipitation freezing
on antenna components. ["water from the sky"] *

Likely causes of disturbance to antennas are:

1. Loss of one or more conductive paths due to components
decreasing in physical size from low temperatures brought
on by icing conditions.

2. Mistuning of critical antenna components due to dielectric
loading from built-up ice.

3. Sloppy construction of antenna components and antenna
system which cause (1) and (2).

Condition (1) may be aggravated by sloppiness of conductive
joints which allow moisture/water build-up during warmth, then
freezing and allowing temporary ice expansion to separate
joints. Cure: Clean and tighten all conductive joints, seal
with some known polymer compound, double-check that
all insulated parts do not contract with temperature and cause
conductive paths.

Condition (1) may also be caused by a break in the feeder
line, particularly the center conductor in coaxial cable. This
would not be in the antenna structure per se but the feeder
line outside the station would also be exposed to icing.
Check: Resistance if normal connection resulted in a
conductive path through antenna or if there is not a DC path
through antenna. Cure: Repair/replace faulty section of
feeder line.

Spray-on anti-icing compounds are transitory cures, good
for aircraft about to depart, not recommended for relatively
permanent installations. They do not prevent ice formation,
simply mix with ice/snow to reduce the total mix freezing
temperature and allow removal. Once ambient temperature
returns to warmth, such de-icing compounds evaporate or
disperse and icing may accumulate again. Rather than

depend on transitory miracle cures such as spritzing a magic fluid (plus installing such a spray system permanently along with a myriad of extra piping), simply use a heater. Andrew Corporation sold 6' to 12' parabolic antenna assemblies in 1950 which had a thermostatically-controlled 150 W flood lamp focussed on the microwave antenna's dipole-reflector feed assembly. Those were successfully used for many years in icing conditions at remote sites.

Condition (2) has only one cure: Don't use an antenna design so sensitive or narrowband, susceptible to the slightest amount of water to mistune it. Normal antenna designs are relatively stable in all types of precipitation.

Condition (3) was encountered by the writer at Warminster NAS on an RA-2 test aircraft that had an added L-band blade antenna on its underside. A required doubler plate (to reinforce structural skin of aircraft) had been drilled with too small a diameter clearance hole for the type N connector. The center conductor connector pin barely made contact on the ground (DC check okay) but lower temperatures aloft caused contraction of the connector pin and contact was opened. Cure: Enlarge the clearance hole in doubler plate to allow full seating of N connector on coax to blade antenna and flight testing resumed normally, no problems from temperature differences.

Note: This newsgroup is for amateur radio policy arguments, not about antenna problems. Rec.radio.amateur.antennas is the appropriate venue for antenna discussion.

* deliberate wording to yield an "opening" for those who cannot get along with others without fighting personalities instead of topics.

I guess it beats picking up ice cubes with one's buttocks for an initiation rite.

I wonder what they did with them, and if they sanitized it afterwards.
